The topic of arsenic in the environment is discussed in depth arsenic is all around us in our soil our water and our food and our bodies have adapted to its presence and it does not usually pose a problem However the natural presence of high concentrations of arsenic in drinking water currently threatens the lives of millions of people in India Bangladesh Mexico and elsewhere It also covers mining and pesticide manufacturing which can lead to high local arsenic concentrations in soils slag heaps and mine tailings which when located close to human activities can produce human health risks Other chapters cover a variety of topics including A proposed connection between arsenic and Cot Death SIDS which caused panic The high concentration of arsenic in kelp products is this harmful What about the 237 000 tonnes of arsenic trioxide stored in a mine in Canada How toxic is arsenic anyway and how do you assess the risks of exposure How did Napoleon die These and many other topics are addressed at a level that will result in understanding without delving into too much technical detail or requiring a degree in chemistry Essential reading for everyone with a general interest in science this illuminating text covers a broad range of topics
