Reinking, Michael C. McKenna, Linda D. Labbo, Ronald D. Kieffer, 1998-04 The major shift going on today in the technologies of reading and writing raises important questions about conventional conceptions of literacy and its role in education society and culture What are the important characteristics of electronic forms of reading and writing distinguishing them from printed forms To what extent and in what ways is literacy being transformed by new technologies This central question is addressed in this volume from diverse multidisciplinary perspectives The contributing authors focus on a guiding question in

one of the following areas which correspond to the major sections of the book Transforming Texts What are the new differences between printed and electronic texts and what are the implications of new textual forms for defining literacy especially in regard to teaching and learning in schools Transforming Readers and Writers How do electronic reading and writing change conceptualizations of literacy development from childhood through adulthood Transforming Classrooms and Schools What are the effects of introducing new reading and writing technologies into schools and classrooms Transforming Instruction How can instruction be adapted in response to the changing literacy landscape and how can teachers and students exploit forms of reading and writing to enhance teaching and learning Transforming Society What are the broad societal implications of the increasing prevalence of electronic forms of reading and writing Transforming Literacy Research What are the questions that must be addressed as digital reading and writing become more common and what approaches to research will be most useful in addressing those questions This volume is the result of an interactive process The contributors met as a group to discuss drafts of their chapters at a one day meeting convened and sponsored by the National Reading Research Center and had read each others chapters prior to this gathering That meeting was followed by a two day conference attended by approximately 180 researchers educators and policymakers who responded to an open invitation to present papers and to attend sessions focusing on the six major themes of the book Contributors then revised their chapters based on interactions with fellow contributors conference participants and volume editors Thus this work is more than just a compilation of the individual authors views Rather it represents a synthesis of a broad range of current thinking about how literacy is being and may be transformed by technology

Viewpoints Mary Strong, Laena Wilder, 2013-05-01 Early in its history anthropology was a visual as well as verbal discipline But as time passed visually oriented professionals became a minority among their colleagues and most anthropologists used written words rather than audiovisual modes as their professional means of communication Today however contemporary electronic and interactive media once more place visual anthropologists and anthropologically oriented artists within the mainstream Digital media

small sized and easy to use equipment and the Internet with its interactive and public forum websites democratize roles once relegated to highly trained professionals alone However having access to a good set of tools does not guarantee accurate and reliable work Visual anthropology involves much more than media alone This book presents visual anthropology as a work in progress open to the myriad innovations that the new audiovisual communications technologies bring to the field It is intended to aid in contextualizing explaining and humanizing the storehouse of visual knowledge that university students and general readers now encounter and to help inform them about how these new media tools can be used for intellectually and socially beneficial purposes Concentrating on documentary photography and ethnographic film as well as lesser known areas of study and presentation including dance painting architecture archaeology and primate research the book s fifteen contributors feature populations living on all of the world s continents as well as within the United States The final chapter gives readers practical advice about how to use the most current digital and interactive technologies to present research findings
