Hypoxia From Genes To The Bedside:

Hypoxia Robert C. Roach, Peter D. Wagner, Peter H. Hackett, 2013-04-17 Hypoxia remains a constant threat throughout life. It is for this reason that the International Hypoxia Society strives to maintain a near quarter century tradition of presenting a stimulating blend of clinical and basic science discussions. International experts from many fields have focused on the state of the art discoveries in normal and pathophysiological responses to hypoxia. Topics in this volume include gene environment interactions, a theme developed in both a clinical context regarding exercise and hypoxia as well as in native populations living in high altitudes. Furthermore, experts in the field have combined topics such as skeletal muscle angiogenesis and hypoxia, high altitude pulmonary edema, new insights into the biology of the erythropoietin receptor, and the latest advances in cardiorespiratory control in hypoxia. This volume explores the fields of anatomy, cardiology, biological transport, and biomedical engineering among many others. Health & Height. Renal Cell Carcinoma Mototsugu Oya,2017-02-14 This book provides a comprehensive review of diagnosis and treatments of renal cell carcinoma RCC for practitioners and researchers with an interest in this disease A major aim of the book is to present the most important and most recent advances in molecular bases and targeted therapy for this neoplasm

The remarkable resistance to chemotherapy and radiotherapy and the minimum contribution of cancer genes that commonly mutate in other adult epithelial cancers have made RCC highly distinct from other types of solid neoplasms. In the past decade however treatment options for RCC have been expanding and moving quickly toward laboratory based and molecular targeted therapies. Advances in RCC therapy also have brought novel treatment options to other types of cancer such as a TKI for hepatocellular carcinoma and gastrointestinal tumors as well as mTOR inhibitors to progressive neuroendocrine tumors of pancreatic origin and to breast cancer suggesting that RCC is no longer an orphan disease in the field of molecular oncology. Additional topics covered in the book include pharmacokinetics and pharmacodynamics in molecular targeted agents and the putative mechanism of resistance to anti angiogenic agents such as intratumoral heterogeneity or cancer stem cell population. This volume provides the latest and most useful information for all readers who are eagerly devoted to curing renal cell carcinoma.

Surrogate Tissue Analysis Michael E. Burczynski, John C. Rockett, 2005-11-10 Both an introduction and a fundamental reference this book explores how to apply genomic proteomic and metabolomic technologies to surrogate tissue analysis. It reviews fundamental analytical issues and actual initial results generated using these technologies. The book covers transcriptional profiling genomics protein profiling proteomics methylation profiling epigenomics metabolite profiling metabolomics and additional biomarker identification methods that can be applied to surrogate tissues.
