Maternal Dietary and Lifestyle Patterns with Pregnancy, Birth, and Child Health Outcomes Airu Chia, Ling-Wei Chen, Jun Shi Lai, Shan Xuan Lim, 2023-12-05 To date limited evidence suggests that maternal preconception and pregnancy dietary patterns are associated with reduced risks of adverse maternal and child health outcomes such as gestational diabetes mellitus and preterm birth However there are insufficient studies examining preconception and pregnancy dietary patterns on birth weight outcomes such as gestational age birth weight for any conclusion to be made Additionally there is a relative paucity of studies investigating preconception postpartum and beyond postpartum dietary patterns Recent research has advanced from examining each modifiable lifestyle factor singly e.g diet physical activity smoking towards a holistic approach of examining multiple lifestyle factors using composite healthy lifestyle scores Two large scale mother offspring cohorts in Ireland and the United States have shown that adherence to a healthy lifestyle during pregnancy and beyond pregnancy is associated with reduced risks of adverse

offspring birth outcomes and childhood obesity. These findings are consistent with data obtained from cross sectional studies based in China and Tanzania.
