Geospatial Technologies In Urban Environments:

Geo-Spatial Technologies in Urban Environments Ryan R. Jensen, Jay D. Gatrell, Daniel D. McLean, 2005 The purpose of this book is to investigate and develop alternate methodological approaches to understand urban environments and urban change In particular the study demonstrates the application of remote sensing data and geographic information systems to the exploration of issues often ignored by the mainstream community of geo technical specialists such as urban forestry urban traffic migration or quality of life in urban areas Case studies show how disciplines like environmental science and planning sociology landscape ecology and architecture regional science and policy design and assessment can benefit from employing remote sensing data and GIS

Geo-Spatial Technologies in Urban Environments Ryan R. Jensen, Jay D. Gatrell, Daniel McLean, 2007-05-11 I was introduced to cities as ecosystems by the late Professor Forest Stearns University of Wisconsin Milwaukee who was an early pioneer in the studies of the urban ecology in the 1970s I still recall the various terms Urban ecosystem Urban zones Urban corridors Megacities or Megacities complexes and Megalopolis used by various discipline experts as they grappled with the complex of all the terrestrial habitats the city Cities have been humanity s habitat since ancient times and one can find references to the cities even in biblical writings and other ancient texts from many parts of the world So what is different now It is the rate of global urbanization that has brought urban systems and urban environments into focus once again This has captured our attention in the past several months For example the British Broadcasting Corporation News BBC news devoted a series of highly educational programs titled Urban planet in July 2006 I was impressed with the breadth and the depth of urban issues discussed in the series and the fact that many academic and government experts were featured to provide an assessment of the current state of global urbanization The United Nations reports that increased urbanization has created a range of serious issues including access to clean water sanitation shelter urban poverty HIV AIDS and problems with urban governance not to mention the issues related to urban environments

Geospatial Technologies for Urban Health Yongmei Lu, Eric Delmelle, 2019-10-10 This volume presents a timely collection of research papers on the progress opportunities and challenges related to the advancement of geospatial technologies for applications in urban health research and management The chapter authors cover technologies ranging from traditional GIS and remote sensing technologies to recently developed tracking locational technologies and volunteered geographic information VGI In four main sections the book uniquely contributes to the conversation of how geospatial technologies and other GIScience research may be enhanced by addressing the data and challenges presented by urban health issues The book is intended for those with backgrounds in health and medical geography social epidemiology urban planning health management and lifestyle research The book starts with an introduction by the editors providing an overview of traditional and emerging geospatial technologies and how they each can significantly contribute to urban health studies Section 1 covers urban health risk and disease and analyses the spatial and temporal patterns of selected urban health issues Section 2

addresses urban health service access and demonstrates how traditional and new geospatial technologies apply to different segments of urban populations facing varied challenges Section 3 focuses on incorporating geospatial technologies in promoting healthy behaviours and lifestyles in urban settings Section 4 assesses how geospatial technologies may be incorporated into urban health policies and management practices Adopting a forward looking perspective these papers examine the various health challenges in urban systems and explore how new and emerging geospatial technologies will need to develop to address these problems
