Geothermal Energy Utilization and Technologies 2020 Carlo Roselli, Maurizio Sasso, 2021-08-31 Rising pollution climate change and the depletion of fossil fuels are leading many countries to focus on renewable based energy conversion systems In particular recently introduced energy policies are giving high priority to increasing the use of renewable energy sources the improvement of energy systems security the minimization of greenhouse gas effect and social and economic cohesion Renewable energies availability varies during the day and the seasons and so their use must be accurately predicted in conjunction with the management strategies based on load shifting and energy storage Thus in order to reduce

the criticalities of this uncertainty the exploitation of more flexible and stable renewable energies such as the geothermal one is necessary Geothermal energy is an abundant renewable source with significant potential in direct use applications such as in district heating systems in indirect use ones to produce electricity and in cogeneration and polygeneration systems for the combined production of power heating and cooling energy This Special Issue includes geothermal energy utilization and the technologies used for its exploitation considering both the direct and indirect use applications Geothermal Energy Mary H. Dickson, Mario Fanelli, 2003 A concise but complete description of geothermal phenomena and geothermal exploitation Features include a comprehensive introduction to the nature classification and distribution of geothermal resources a description of geothermal electricity generation and non electric uses an analysis of the potential impact of geothermal energy utilization on the environment and socio economic and regulatory aspects This publication will appeal to students in power engineering mechanical engineering and physics who wish to further their knowledge in geothermal applications
