Hicks,2004-05-14 This volume contains the nal proceedings of the MetaInformatics Symposium 2003 MIS 2003 The event was held September 17 20 on the campus of the Graz University of Technology in Graz Austria As with previous events in the MIS series MIS 2003 brought together searchers and practitioners from a wide variety of elds to discuss a broad range of topics and ideas related to the eld of computer science The contributions that were accepted to and presented at the

symposium are of a wide variety Theyrangefromtheoreticalconsiderationsofimportantmetainformatics related questions and issues to practical descriptions of approaches and systems that fer assistance in their resolution I hope you will nd the papers contained in this volume as interesting as the other members of the program committee and Ihave These proceedings would not have been possible without the help and ass tance of many people In particular I would like to acknowledge the assistance of Springer Verlag in Heidelberg Germany especially Anna Kramer the computer science editor and Alfred Hofmann the executive editor for the LNCS series **Mathematics of Program Construction** Claude Bolduc,Jules Desharnais,Bechir Ktari,2010-06 This book constitutes the refereed proceedings of the 10th International Conference on Mathematics of Program Construction MPC 2010 held in Qu bec City Canada in June 2010 The 19 revised full papers presented together with 1 invited talk and the abstracts of 2 invited talks were carefully reviewed and selected from 37 submissions The focus is on techniques that combine precision with conciseness enabling programs to be constructed by formal calculation Within this theme the scope of the series is very diverse including programming methodology program specification and transformation program analysis programming paradigms programming calculi programming language semantics security and program logics **Recent Trends in Data Type Specification** Michel Bidoit,Christine Choppy,1993-01-29 The algebraic specification of abstract data types has been a flourishing research topic in computer science since 1974 The main goal of this work isto evolve theoretical foundations and a methodology to support the design and formal development of reliable software This volume gives the proceedings of the Eighth Workshop on Specification of Abstract Data Types held jointly with the Third COMPASS workshop near Paris in August 1991 The main topics covered by the joint workshop are specification languagesand program development algebraic specification of concurrency theorem proving object oriented specifications order sorted algebras abstract implementation and behavioral semantics The volume contains four invited surveys and twelve contributed papers all of which underwent a careful refereeing process **Automata, Logics, and Infinite Games** Erich Grädel,Wolfgang Thomas,Thomas Wilke,2003-08-02 A central aim and ever lasting dream of computer science is to put the development of hardware and software systems on a mathematical basis which is both firm and practical Such a scientific foundation is needed especially for the construction of reactive programs like communication protocols or control systems For the construction and analysis of reactive systems an elegant and powerful theory has been developed based on automata theory logical systems for the specification of nonterminating behavior and infinite two person games The 19 chapters presented in this multi author monograph give a consolidated overview of the research results achieved in the theory of automata logics and infinite games during the past 10 years Special emphasis is placed on coherent style complete coverage of all relevant topics motivation examples justification of constructions and exercises **Advances in Database Systems** J. Paredaens,L. Tenenbaum,2014-05-04 Advanced information technology is pervasive in any kind of human activity science business finance management and others and this

is particularly true for database systems Both database theory and database applications constitute a very important part of the state of the art of computer science Meanwhile there is some discrepancy between different aspects of database activity Theoreticians are sometimes not much aware of the real needs of business and industry software specialists not always have the time or the apportunity to get acquainted with the most recent theoretical ideas and trends as well as with advanced prototypes arising from these ideas potential users often do not have the possibility of evaluating the theoretical foundations and the potential practical impact of different commercial products So the main goal of the course was to put together people involved in different aspects of database activity and to promote active exchange of ideas among them *Petri Net Synthesis* Eric Badouel,Luca Bernardinello,Philippe Darondeau,2015-11-02 This book is a comprehensive systematic survey of the synthesis problem and of region theory which underlies its solution covering the related theory algorithms and applications The authors focus on safe Petri nets and place transition nets P T nets treating synthesis as an automated process which given behavioural specifications or partial specifications of a system to be realized decides whether the specifications are feasible and then produces a Petri net realizing them exactly or if this is not possible produces a Petri net realizing an optimal approximation of the specifications In Part I the authors introduce elementary net synthesis In Part II they explain variations of elementary net synthesis and the unified theory of net synthesis The first three chapters of Part III address the linear algebraic structure of regions synthesis of P T nets from finite initialized transition systems and the synthesis of unbounded P T nets Finally the last chapter in Part III and the chapters in Part IV cover more advanced topics and applications P T net with the step firing rule extracting concurrency from transition systems process discovery supervisory control and the design of speed independent circuits Most chapters conclude with exercises and the book is a valuable reference for both graduate students of computer science and electrical engineering and researchers and engineers in this domain Principles of Abstract Interpretation Patrick Cousot,2021-09-21 Introduction to abstract interpretation with examples of applications to the semantics specification verification and static analysis of computer programs Formal methods are mathematically rigorous techniques for the specification development manipulation and verification of safe robust and secure software and hardware systems Abstract interpretation is a unifying theory of formal methods that proposes a general methodology for proving the correctness of computing systems based on their semantics The concepts of abstract interpretation underlie such software tools as compilers type systems and security protocol analyzers This book provides an introduction to the theory and practice of abstract interpretation offering examples of applications to semantics specification verification and static analysis of programming languages with emphasis on calculational design The book covers all necessary computer science and mathematical concepts including most of the logic order linear fixpoint and discrete mathematics frequently used in computer science in separate chapters before they are used in the text Each chapter offers exercises and selected solutions Chapter topics include syntax parsing trace semantics properties and their abstraction

fixpoints and their abstractions reachability semantics abstract domain and abstract interpreter specification and verification effective fixpoint approximation relational static analysis and symbolic static analysis The main applications covered include program semantics program specification and verification program dynamic and static analysis of numerical properties and of such symbolic properties as dataflow analysis software model checking pointer analysis dependency and typing both for forward and backward analysis and their combinations Principles of Abstract Interpretation is suitable for classroom use at the graduate level and as a reference for researchers and practitioners   *Term Rewriting Systems* Terese,2003-03-20 Term rewriting systems developed out of mathematical logic and are an important part of theoretical computer science They consist of sequences of discrete transformation steps where one term is replaced with another and have applications in many areas from functional programming to automatic theorem proving and computer algebra This 2003 book starts at an elementary level with the earlier chapters providing a foundation for the rest of the work Much of the advanced material appeared here for the first time in book form Subjects treated include orthogonality termination completion lambda calculus higher order rewriting infinitary rewriting and term graph rewriting Many exercises are included with selected solutions provided on the web A comprehensive bibliography makes this book ideal both for teaching and research A chapter is included presenting applications of term rewriting systems with many pointers to actual implementations   **Declarative Agent Languages and Technologies VI** Matteo Baldoni,Tran Cao Son,Birna van Riemsdijk,Michael Winikoff,2008-12-25 This volume constitutes the revised selected papers of the 6th International Workshop DALT 2008 held as satellite workshop of AAMAS 2008 the 7th International Joint Conference on Autonomous Agents and Multiagent Systems in Estoril Portugal on May 12 2008 The 12 papers presented together with 3 invited papers were carefully reviewed and selected from 14 submissions The workshop provided a discussion forum to both i support the transfer of declarative paradigms and techniques to the broader community of agent researchers and practitioners and ii to bring the issue of designing complex agent systems to the attention of researchers working on declarative languages and technologies   **TAPSOFT'97: Theory and Practice of Software Development** Michel Bidoit,Max Dauchet,1997-04-02 This book constitutes the refereed proceedings of the 7th International Joint Conference CAAP FASE on Theory and Practice of Software Development TAPSOFT 97 held in Lille France in April 1997 The volume is organized in three parts The first presents invited contributions the second is devoted to trees in algebra in programming CAAP and the third to formal approaches in software engineering FASE The 30 revised full papers presented in the CAAP section were selected from 77 submissions the 23 revised full papers presented in the FASE section were selected from 79 submissions   Logic-Based Program Synthesis and Transformation Germán Vidal,2012-07-20 This book constitutes the thoroughly refereed proceedings of the 21st International Symposium on Logic Based Program Synthesis and Transformation LOPSTR 2011 held in Odense Denmark in July 2011 The 6 revised full papers presented together with 8 additional papers were carefully reviewed and selected from 28 submissions Among the

topics covered are specification synthesis verification analysis optimization specialization security certification applications and tools program model manipulation and transformation techniques for any programming language paradigm

Fundamentals of Computation Theory Gabriel Ciobanu,Gheorghe Păun,1999 This book constitutes the refereed proceedings of the 12th International Symposium on Fundamentals of Computation Theory FCT 99 held in Iasi Romania in August September 1999 The 42 revised full papers presented together with four invited papers were carefully selected from a total of 102 submissions Among the topics addressed are abstract data types algorithms and data structures automata and formal languages categorical and topological approaches complexity computational geometry concurrency cryptology distributed computing logics in computer science process algebras symbolic computation molecular computing quantum computing etc   **A Guided Tour of Artificial Intelligence Research** Pierre Marquis,Odile Papini,Henri Prade,2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning Volume 1 Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI This third volume is dedicated to the interfaces of AI with various fields with which strong links exist either at the methodological or at the applicative levels The foreword of this volume reminds us that AI was born for a large part from cybernetics Chapters are devoted to disciplines that are historically sisters of AI natural language processing pattern recognition and computer vision and robotics Also close and complementary to AI due to their direct links with information are databases the semantic web information retrieval and human computer interaction All these disciplines are privileged

places for applications of AI methods This is also the case for bioinformatics biological modeling and computational neurosciences The developments of AI have also led to a dialogue with theoretical computer science in particular regarding computability and complexity Besides AI research and findings have renewed philosophical and epistemological questions while their cognitive validity raises questions to psychology The volume also discusses some of the interactions between science and artistic creation in literature and in music Lastly an epilogue concludes the three volumes of this Guided Tour of AI Research by providing an overview of what has been achieved by AI emphasizing AI as a science and not just as an innovative technology and trying to dispel some misunderstandings   **Programs as Diagrams** Dusko Pavlovic,2023-09-19 It is not always clear what computer programs mean in the various languages in which they can be written yet a picture can be worth 1000 words a diagram 1000 instructions In this unique textbook reference programs are drawn as string diagrams in the language of categories which display a universal syntax of mathematics Computer scientists use them to analyze the program semantics programmers to display the syntax of computations Here the string diagrammatic depictions of computations are construed as programs in a single instruction programming language Such programs as diagrams show how functions are packed in boxes and tied by strings Readers familiar with categories will learn about the foundations of computability readers familiar with computability gain access to category theory Additionally readers familiar with both are offered many opportunities to improve the approach Topics and features Delivers a crash diagram based course in theory of computation Uses single instruction diagrammatic programming language Offers a practical introduction into categories and string diagrams as computational tools Reveals how computability is programmability rather than an ether permeating computers Provides a categorical model of intensional computation is unique up to isomorphism Serves as a stepping stone into research of computable categories In addition to its early chapters introducing computability for beginners this flexible textbook resource also contains both middle chapters that expand for suitability to a graduate course as well as final chapters opening up new research Dusko Pavlovic is a professor at the Department of Information and Computer Sciences at the University of Hawaii at Manoa and by courtesy at the Department of Mathematics and the College of Engineering He completed this book as an Excellence Professor at Radboud University in Nijmegen The Netherlands
