Fuzzy Measures And Integrals Theory And Applications:

Fuzzy Measures and Integrals Michel Grabisch, Toshiaki Murofushi, Michio Sugeno, 2000-01-24 Concepts similar to fuzzy measure have been introduced independently in many domains in non expected utility theory cooperative game theory complexity analysis measure theory etc This book reflects all these facets It gathers survey papers written by leading researchers in the field covering a selection of most significant topics The first part is devoted to fundamental and theoretical material while the second part deals with more applied topics such as decision making and pattern recognition The book is of interest to researchers in decision making artificial intelligence applied mathematics mathematical social sciences etc

Fuzzy Measures and Integrals, 1999 Nonlinear Integrals And Their Applications In Data Mining Zhenyuan Wang, Rong Yang, Kwong-sak Leung, 2010-06-09 Regarding the set of all feature attributes in a given database as the universal set this monograph discusses various nonadditive set functions that describe the interaction among the contributions from feature attributes towards a considered target attribute Then the relevant nonlinear integrals are investigated These integrals can be applied as aggregation tools in information fusion and data mining such as synthetic evaluation nonlinear multiregressions and nonlinear classifications Some methods of fuzzification are also introduced for nonlinear integrals such that fuzzy data can be treated and fuzzy information is retrievable The book is suitable as a text for graduate courses in mathematics computer science and information science It is also useful to researchers in the relevant area *Intelligent Technologies--theory and Applications* Peter Sincak, 2002 Annotation Intelligent Technologies including neural network evolutionary computations fuzzy approach and mainly hybrid approaches are very promising tools to build intelligent technologies in general The progress of each theory or application is provided by a number of various theoretical as well as applicational experiments Machine intelligence is the only alternative how to increase the level of technology to make technology more human centred and more effective for society This book includes theoretical as well as applicational papers in the field of neural networks fuzzy systems and mainly evolutionary computations which application potential was increased by enormous progress in computer power Hybrid technologies are still progressing and are trying to make some more applications with their ability to learn and process fuzzy information Neurogenetic systems are very interesting approach to make systems reconfigurable and on line systems for real world applications The book is presenting papers from Japan USA Hungary Poland Germany Finland France Slovakia United Kingdom Czech Republic and some other countries This publication provides the latest state of the art in the field and could be contributed to theory and applications in the machine intelligence tools and their wide application potential in current and future technologies within the Information Society

Generalized Measure Theory Zhenyuan Wang, George J. Klir, 2010-07-07 Generalized Measure Theory examines the relatively new mathematical area of generalized measure theory The exposition unfolds systematically beginning with preliminaries and new concepts followed by a detailed treatment of important new results regarding various types of

nonadditive measures and the associated integration theory The latter involves several types of integrals Sugeno integrals Choquet integrals pan integrals and lower and upper integrals All of the topics are motivated by numerous examples culminating in a final chapter on applications of generalized measure theory Some key features of the book include many exercises at the end of each chapter along with relevant historical and bibliographical notes an extensive bibliography and name and subject indices The work is suitable for a classroom setting at the graduate level in courses or seminars in applied mathematics computer science engineering and some areas of science A sound background in mathematical analysis is required Since the book contains many original results by the authors it will also appeal to researchers working in the emerging area of generalized measure theory

Arithmetic Of Z-numbers, The: Theory And Applications Rafik Aziz Aliev,Akif Alizadeh,Rashad Rafiq Aliyev,Oleg H Huseynov,2015-05-08 Real world information is imperfect and is usually described in natural language NL Moreover this information is often partially reliable and a degree of reliability is also expressed in NL In view of this the concept of a Z number is a more adequate concept for the description of real world information The main critical problem that naturally arises in processing Z numbers based information is the computation with Z numbers Nowadays there is no arithmetic of Z numbers suggested in existing literature This book is the first to present a comprehensive and self contained theory of Z arithmetic and its applications Many of the concepts and techniques described in the book with carefully worked out examples are original and appear in the literature for the first time The book will be helpful for professionals academics managers and graduate students in fuzzy logic decision sciences artificial intelligence mathematical economics and computational economics

Information granules are fundamental conceptual entities facilitating perception of complex phenomena and contributing to the enhancement of human centricity in intelligent systems The formal frameworks of information granules and information granulation comprise fuzzy sets interval analysis probability rough sets and shadowed sets to name only a few representatives Among current developments of Granular Computing interesting options concern information granules of higher order and of higher type The higher order information granularity is concerned with an effective formation of information granules over the space being originally constructed by information granules of lower order This construct is directly associated with the concept of hierarchy of systems composed of successive processing layers characterized by the increasing levels of abstraction This idea of layered hierarchical realization of models of complex systems has gained a significant level of visibility in fuzzy modeling with the well established concept of hierarchical fuzzy models where one strives to achieve a sound tradeoff between accuracy and a level of detail captured by the model and its level of interpretability Higher type information granules emerge when the information granules themselves cannot be fully characterized in a purely numerical fashion but instead it becomes convenient to exploit their realization in the form of other types of information granules such as type 2 fuzzy sets interval valued fuzzy sets or probabilistic fuzzy sets Higher order and higher type of information granules constitute the focus of the studies on Granular Computing presented in this study The book elaborates on sound methodologies of Granular Computing algorithmic pursuits and an array of diverse applications and case studies in environmental studies option price forecasting and power engineering **Evolutionary Design of Intelligent Systems in Modeling, Simulation and Control** Oscar Castillo, Witold Pedrycz, 2009-10-13 We describe in this book new methods for evolutionary design of intelligent systems using soft computing and their applications in modeling simulation and control Soft Computing SC consists of several intelligent computing paradigms including fuzzy logic neural networks and evolutionary algorithms which can be used to produce powerful hybrid intelligent systems The book is organized in four main parts which contain a group of papers around a similar subject The first part consists of papers with the main theme of evolutionary design of fuzzy systems in intelligent control which consists of papers that propose new methods for designing and optimizing intelligent controllers for different applications The second part contains papers with the main theme of evolutionary design of intelligent systems for pattern recognition applications which are basically papers using evolutionary algorithms for optimizing modular neural networks with fuzzy systems for response integration for achieving pattern recognition in different applications The third part contains papers with the themes of models for learning and social
