sciences she develops an alternative The main principles of this new theory imply a combined semasiological and onomasiological perspective only few categories can be clearly delineated form and content of definitions vary according to category types and user s requirements synonymy and polysemy are functional in special language and a diachronic approach is unavoidable This last principle implies the varying importance of historical information in definitions the non arbitrariness of lexicalisation and the importance of cognitive models In a last chapter the author shows how the methods and principles of the alternative approach are applicable in terminography and how this is going to have an impact on software for terminological database construction This book will be valuable for specialists in terminology theory practising terminographers and for anybody interested in special language cognitive models and prototype theory The International Politics of Biotechnology Alan M. Russell, John Vogler, 2000 There are three sections The first considers the nature of the science itself the normative questions raised and the significance of gender responses Following these broad issues the second section addresses biotechnology in relation to international political economy trade and the environment highlighting the politics of food and patents The final section tackles the question of biological knowledge applied to weapons and the global responses **Historical and Philosophical Perspectives on Biomedical Ethics: From Paternalism to Autonomy?** Andreas-Holger Maehle, Johanna Geyer-Kordesch, 2017-11-01 This title was first published in 2002 This volume discusses the subject of biomedical ethics Various views historical and contemporary are discussed with the editors using the contrasting concepts in the shift from paternalism to autonomy in 20th century medicine as a heuristic tool for the critical study of ethics in medicine As far as the evidence in this volume goes paternalistic medical practices and patient autonomy had an uneasy relationship by the beginning of the 20th century A hundred years later full autonomy in decisions on medical treatment is still subject to numerous caveats The text pays close attention to the interplay between various players noting how factors such as social contexts governmental organizations and the biotechnological industry influence and shape responses to the principle of bioethics **The God/Man/World Triangle** R. Crawford, 1997-10-06 Why is there a world Does it reflect the presence of God in any way Did the world spontaneously come into existence or is there a creator How will it end Does God Exist Do religions give a coherent view of His existence and nature Can we enter into relation with Him Robert Crawford tries to answer these and other questions by arguing that religion and science complement one another and while they use different sources and methods insights can be gleaned from both concerning our nature the world and God Major attention is given to Christianity because modern science arose in that context but the discussion includes the teachings of five other religions in the hope that we can also learn from them *Exploring Bioinformatics* Lee Mercado, 2019-05-01 Exploring Bioinformatics is a concise yet comprehensive textbook of bioinformatics that provides a broad introduction to the entire field Written specifically for a life science audience the basics of bioinformatics are explained followed by discussions of the state of the art computational tools available to solve biological research problems All key

areas of bioinformatics are covered including biological databases sequence alignment gene and promoter prediction molecular phylogenetics structural bioinformatics genomics and proteomics The book emphasizes how computational methods work and compares the strengths and weaknesses of different methods This balanced yet easily accessible text will be invaluable to students who do not have sophisticated computational backgrounds Technical details of computational algorithms are explained with a minimum use of mathematical formulas graphical illustrations are used in their place to aid understanding The effective synthesis of existing literature as well as in depth and up to date coverage of all key topics in bioinformatics make this an ideal textbook for all bioinformatics courses taken by life science students and for researchers wishing to develop their knowledge of bioinformatics to facilitate their own research

Sociocultural Situatedness Roslyn M. Frank, René Dirven, Tom Ziemke, Enrique Bernárdez, 2008-08-27 The contributions contained in the second volume of the two volume set *Body Language and Mind* introduce and elaborate upon the concept of sociocultural situatedness understood broadly as the way in which minds and cognitive processes are shaped both individually and collectively by their interaction with socioculturally contextualized structures and practices and furthermore how these structures interact contextually with language and can become embodied in it Drawing on theoretical concepts and analytical tools within the purview of cognitive linguistics and related fields the volume explores the relationship between body language and mind focusing on the complex mutually reinforcing relationships holding between the sociocultural contextualisation of language and inversely the linguistic contextualisation of culture Stated differently the notion of sociocultural situatedness allows for language to be seen as a cultural activity and at the same time as a subtle mechanism for organizing culture and thought The volume offers a representative multi and interdisciplinary collection of new papers on sociocultural situatedness bringing together for the first time a wide variety of perspectives and case studies directed explicitly to elucidating the analytical potential of this concept for cognitive linguists and other researchers working in allied fields such as AI discourse studies and cognitive anthropology The book brings together several core issues related to the notion of sociocultural situatedness some of which have been addressed previously although to a large degree sporadically and from a variety of disciplinary perspectives without fully exploring the possible analytical advantages of this concept as a tool for investigating the role of culturally entrenched schemata in cognition and language In short this is the first comprehensive survey of sociocultural situatedness theory

Genetic Glass Ceilings Jonathan Gressel, 2020-03-03 As the world's population rises to an expected ten billion in the next few generations the challenges of feeding humanity and maintaining an ecological balance will dramatically increase Today we rely on just four crops for 80 percent of all consumed calories wheat rice corn and soybeans Indeed reliance on these four crops may also mean we are one global plant disease outbreak away from major famine In this revolutionary and controversial book Jonathan Gressel argues that alternative plant crops lack the genetic diversity necessary for wider domestication and that even the Big Four have reached a genetic glass ceiling no matter how much they are bred there is simply not enough genetic diversity available to significantly improve their agricultural value Gressel points the way through the glass ceiling by advocating transgenics a technique where genes from one species are transferred to another He maintains that with simple safeguards the technique is a safe solution to the genetic glass ceiling conundrum Analyzing alternative crops including palm oil papaya buckwheat tef and sorghum Gressel demonstrates how gene manipulation could enhance their potential for widespread domestication and reduce our dependency on the Big Four He also describes a number of ecological benefits that could be derived with the aid of transgenics A compelling synthesis of ideas from agronomy medicine breeding physiology population genetics molecular biology and biotechnology Genetic Glass Ceilings presents transgenics as an inevitable and desperately necessary approach to securing and diversifying the world's food supply
