## Geometry Of Normed Linear Spaces:

*Geometry of Normed Linear Spaces* Robert Gardner Bartle, 1986 Features 17 papers that resulted from a 1983 conference held to honor Professor Mahlon Marsh Day upon his retirement from the University of Illinois This work is suitable for researchers and graduate students in functional analysis      **Geometry of Linear 2-normed Spaces** Raymond W. Freese, Yeol Je Cho, 2001      **Geometry of Normed Linear Spaces** R. G. Birtle, 1986      *Normed Linear Spaces* Mahlon M. Johnson, Joram Lindenstrauss, 2001 The Handbook presents an overview of most aspects of modern Banach space theory and its applications The up to date surveys authored by leading research workers in the area are written to be accessible to a wide audience In addition to presenting the state of the art of Banach space theory the surveys discuss the relation of the subject with such areas as harmonic analysis complex analysis classical convexity probability theory operator theory combinatorics logic geometric measure theory and partial differential equations The Handbook begins with a chapter on basic concepts in Banach space theory which contains all the background needed for reading any other chapter in the Handbook Each of the twenty one articles in this volume after the basic concepts chapter is devoted to one specific direction of Banach space theory or its applications Each article contains a motivated introduction as well as an exposition of the main results methods and open problems in its specific direction Most have an extensive bibliography Many articles contain new proofs of known results as well as expositions of proofs which are hard to locate in the literature or are only outlined in the original research papers As well as being valuable to experienced researchers in Banach space theory the Handbook should be an outstanding source for inspiration and information to graduate students and beginning researchers The Handbook will be useful for mathematicians who want to get an idea of the various developments in Banach space theory      *The Geometry of Metric and Linear Spaces* L. M. Kelly, 2006-11-14

Geometry of a Normed Linear Space Margaret Ann Tevis Herzog, 1959      **Introduction to Banach Spaces and their Geometry**, 2011-10-10 Introduction to Banach Spaces and their Geometry      *Geometry of Banach Spaces, Duality Mappings and Nonlinear Problems* I. **Birkhoff-James Orthogonality and Geometry of Operator Spaces** Arpita Mal,Kallol Paul,Debmalya Sain,2024-02-19

This book provides an insight into the geometric aspects of the spaces of operators studied by using the notion of Birkhoff James orthogonality It studies the norm attainment set of an operator and its properties the notion of which plays a very important role in the characterization of B J orthogonality of operators The structure of the norm attainment set is studied for Hilbert space operators and is yet to be understood completely for operators between Banach spaces The book explores the interrelation between B J orthogonality in the ground space and in the space of operators in its fullest generality The book further explores the concept of approximate B J orthogonality and investigated its geometry both in the ground space as well as in the space of operators It highlights important geometric properties like smoothness and  $k$  smoothness of bounded linear operators extreme contractions and symmetry of bounded linear operators defined between Hilbert spaces as well as Banach spaces

*Orthonormal Systems and Banach Space Geometry* Albrecht Pietsch,Jörg Wenzel,1998-09-10 This book describes the interplay between orthonormal expansions and Banach space geometry

Discrete Geometry and Optimization Károly Bezdek,Antoine Deza,Yinyu Ye,2013-07-09 Optimization has long been a source of both inspiration and applications for geometers and conversely discrete and convex geometry have provided the foundations for many optimization techniques leading to a rich interplay between these subjects The purpose of the Workshop on Discrete Geometry the Conference on Discrete Geometry and Optimization and the Workshop on Optimization held in September 2011 at the Fields Institute Toronto was to further stimulate the interaction between geometers and optimizers This volume reflects the interplay between these areas The inspiring Fejes T th Lecture Series delivered by Thomas Hales of the University of Pittsburgh exemplified this approach While these fields have recently witnessed a lot of activity and successes many questions remain open For example Fields medalist Stephen Smale stated that the question of the existence of a strongly polynomial time algorithm for linear optimization is one of the most important unsolved problems at the beginning of the 21st century The broad range of topics covered in this volume demonstrates the many recent and fruitful connections between different approaches and features novel results and state of the art surveys as well as open problems

**Surveys in Geometry I** Athanase Papadopoulos,2022-02-18 The volume consists of a set of surveys on geometry in the broad sense

The goal is to present a certain number of research topics in a non technical and appealing manner The topics surveyed include spherical geometry the geometry of finite dimensional normed spaces metric geometry Bishop Gromov type inequalities in Gromov hyperbolic spaces convexity theory and inequalities involving volumes and mixed volumes of convex bodies 4 dimensional topology Teichmüller spaces and mapping class groups actions translation surfaces and their dynamics and complex higher dimensional geometry Several chapters are based on lectures given by their authors to middle advanced level students and young researchers The whole book is intended to be an introduction to current research trends in geometry

**Handbook of Convex Geometry** Bozzano G Luisa,2014-06-28 Handbook of Convex Geometry Volume B offers

a survey of convex geometry and its many ramifications and connections with other fields of mathematics including convexity lattices crystallography and convex functions The selection first offers information on the geometry of numbers lattice points and packing and covering with convex sets Discussions focus on packing in non Euclidean spaces problems in the Euclidean plane general convex bodies computational complexity of lattice point problem centrally symmetric convex bodies reduction theory and lattices and the space of lattices The text then examines finite packing and covering and tilings including plane tilings monohedral tilings bin packing and sausage problems The manuscript takes a look at valuations and dissections geometric crystallography convexity and differential geometry and convex functions Topics include differentiability inequalities uniqueness theorems for convex hypersurfaces mixed discriminants and mixed volumes differential geometric characterization of convexity reduction of quadratic forms and finite groups of symmetry operations The selection is a dependable source of data for mathematicians and researchers interested in convex geometry

**Convexity from the Geometric Point of View** Vitor Balestro, Horst Martini, Ralph Teixeira, 2024-07-14 This text gives a comprehensive introduction to the common core of convex geometry Basic concepts and tools which are present in all branches of that field are presented with a highly didactic approach Mainly directed to graduate and advanced undergraduates the book is self contained in such a way that it can be read by anyone who has standard undergraduate knowledge of analysis and of linear algebra Additionally it can be used as a single reference for a complete introduction to convex geometry and the content coverage is sufficiently broad that the reader may gain a glimpse of the entire breadth of the field and various subfields The book is suitable as a primary text for courses in convex geometry and also in discrete geometry including polytopes It is also appropriate for survey type courses in Banach space theory convex analysis differential geometry and applications of measure theory Solutions to all exercises are available to instructors who adopt the text for coursework Most chapters use the same structure with the first part presenting theory and the next containing a healthy range of exercises Some of the exercises may even be considered as short introductions to ideas which are not covered in the theory portion Each chapter has a notes section offering a rich narrative to accompany the theory illuminating the development of ideas and providing overviews to the literature concerning the covered topics In most cases these notes bring the reader to the research front The text includes many figures that illustrate concepts and some parts of the proofs enabling the reader to have a better understanding of the geometric meaning of the ideas An appendix containing basic and geometric measure theory collects useful information for convex geometers

Elements of Geometry of Balls in Banach Spaces Kazimierz Goebel, Stanislaw Prus, 2018-09-06 One of the subjects of functional analysis is classification of Banach spaces depending on various properties of the unit ball The need of such considerations comes from a number of applications to problems of mathematical analysis The list of subjects includes differential calculus in normed spaces approximation theory weak topologies and reflexivity general theory of convexity and convex functions metric fixed point theory and others The book presents basic facts from this

field     Geometry of Banach Spaces - Selected Topics J. Diestel, 2006-11-14     *Geometric Aspects of Banach Spaces* E. Martin-Peinador, A. Rodés, 1989-07-06 This volume concentrates on some important and contemporary themes in Banach space theory     Open Problems in the Geometry and Analysis of Banach Spaces Antonio J. Guirao, Vicente Montesinos, Václav Zizler, 2016-07-26 This is an collection of some easily formulated problems that remain open in the study of the geometry and analysis of Banach spaces Assuming the reader has a working familiarity with the basic results of Banach space theory the authors focus on concepts of basic linear geometry convexity approximation optimization differentiability renormings weak compact generating Schauder bases and biorthogonal systems fixed points topology and nonlinear geometry The main purpose of this work is to help in convincing young researchers in Functional Analysis that the theory of Banach spaces is a fertile field of research full of interesting open problems Inside the Banach space area the text should help expose young researchers to the depth and breadth of the work that remains and to provide the perspective necessary to choose a direction for further study Some of the problems are longstanding open problems some are recent some are more important and some are only local problems Some would require new ideas some may be resolved with only a subtle combination of known facts Regardless of their origin or longevity each of these problems documents the need for further research in this area
