English Algorithmic Grammar Hristo Georgiev, 2006 The ultimate goal of Computational Linguistics is to teach the computer to understand Natural Language This research monograph presents a description of English according to algorithms which can be programmed into a computer to analyse natural language texts The algorithmic approach uses series of instructions written in Natural Language and organised in flow charts with the aim of analysing certain aspects of the grammar of a sentence One problem with text processing is the difficulty in distinguishing word forms that belong to parts of speech taken out of context In order to solve this problem Hristo Georgiev starts with the assumption that every word is either a verb or a non verb From here he presents an algorithm which allows the computer to recognise parts of speech which to a human would be obvious though the meaning of the words Emphasis for a computer is placed on verbs nouns participles and adjectives English Algorithmic Grammar presents information for computers to recognise tenses syntax parsing reference and clauses The final chapters of the book examine the further applications of an algorithmic approach to English grammar and suggests ways in which the computer can be programmed to recognise meaning This is an innovative cutting edge approach to computational linguistics that will be essential reading for academics researching computational linguistics machine translation and natural language processing English Algorithmic Grammar Hristo

Intelligent Algorithms in Ambient and Biomedical Computing Wim Verhaegh, Emile Aarts, Jan Korst, 2006-09-09

The rapid growth in electronic systems in the past decade has boosted search in the area of computational intelligence. As it has become increasingly easy to generate, collect, transport, process, and store huge amounts of data, the role of intelligent algorithms has become prominent in order to visualize, manipulate, retrieve, and interpret the data. For instance, intelligent search techniques have been developed to search for relevant items in huge collections of web pages, and data mining and interpretation techniques play a very important role in

making sense out of huge amounts of biomolecular measurements. As a result, the added value of many modern systems is no longer determined by hardware only but increasingly by the intelligent software that supports and facilitates the user in realizing his or her objectives. Over the past years, considerable progress has been made in the area of computational intelligence which can be positioned at the intersection of computer science, discrete mathematics and cognitive science. This has led to a growing community of practitioners within Philips Research that develop, analyze and apply intelligent algorithms. The Symposium on Intelligent Algorithms (SOIA) intends to provide this community of practitioners with a platform to exchange information. The first edition of SOIA held in 2002 addressed the topic of intelligent algorithms in ambient intelligence. *ECAI 2006* G.

Brewka, S., Coradeschi, A., Perini, 2006-08-10 In the summer of 1956 John McCarthy organized the famous Dartmouth Conference which is now commonly viewed as the founding event for the field of Artificial Intelligence. During the last 50 years AI has seen a tremendous development and is now a well established scientific discipline all over the world. Also in Europe AI is in excellent shape as witnessed by the large number of high quality papers in this publication. In comparison with ECAI 2004 there is a strong increase in the relative number of submissions from Distributed AI, Agents and Cognitive Modelling. Knowledge Representation Reasoning is traditionally strong in Europe and remains the biggest area of ECAI 06. One reason the figures for Case Based Reasoning are rather low is that much of the high quality work in this area has found its way into prestigious applications and is thus represented under the heading of PAIS. **Application of Big Data,**
