Tourism Studies and the Social Sciences Andrew Holden,2004-06-01 Based upon a social science approach to understanding the significance of tourism in contemporary

society Andrew Holden's fascinating book highlights tourism as a multidisciplinary area of study with rich and varied theoretical underpinnings. Here Holden introduces social science disciplines and applies relevant theories to the understanding of tourism. He investigates how the economic and political structures of society influence the manifestation of tourism at a global level and subsequently considers a variety of topical issues including citizenship and social exclusion, tourism as a form of trade, consumerism, the consequences of tourism, and feminism and ethics. Each chapter includes a brief introductory summary of the discipline, a critique of its main theories and concepts which have relevance to tourism, a discussion of how the theories and concepts have been applied to tourism using cases and examples, international case studies, and examples. Punctuated with study and teaching aids, chapter summaries, and think points to encourage reflection, this excellent broad-ranging textbook provides a wider understanding of tourism's role in society.

What Should Schools Teach? Alka Sehgal Cuthbert, Alex Standis, 2021-01-07 The design of school curriculums involves deep thought about the nature of knowledge and its value to learners and society. It is a serious responsibility that raises a number of questions: What is knowledge for? What knowledge is important for children to learn? How do we decide what knowledge matters in each school subject? And how far should the knowledge we teach in school be related to academic disciplinary knowledge? These and many other questions are taken up in *What Should Schools Teach*. The blurring of distinctions between pedagogy and curriculum and between experience and knowledge has served up a confusing message for teachers about the part that each plays in the education of children. Schools teach through subjects, but there is little consensus about what constitutes a subject and what they are for. This book aims to dispel confusion through a robust rationale for what schools should teach that offers key understanding to teachers of the relationship between knowledge, what to teach, and their own pedagogy, how to teach, and how both need to be informed by values of intellectual freedom and autonomy. This second edition includes new chapters on Chemistry, Drama, Music, and Religious Education, and an updated chapter on Biology. A revised introduction reflects on emerging discourse around decolonizing the curriculum and on the relationship between the knowledge that children encounter at school and in their homes.

Geography, Its History and Concepts Arild Holt-Jensen, 1981

Plant Geography of Chile Andres Moreira-Munoz, 2011-01-19 The first and so far only *Plant Geography of Chile* was written about 100 years ago, since when many things have changed: plants have been renamed and reclassified, taxonomy and systematics have experienced deep changes, as have biology, geography, and biogeography. The time is therefore ripe for a new look at Chile's plants and their distribution. Focusing on three key issues: botany, systematics, geography, and biogeographical analysis, this book presents a thoroughly updated synthesis both of Chilean plant geography and of the different approaches to studying it. Because of its range from the neotropics to the temperate sub-Antarctic, Chile's flora provides a critical insight into evolutionary patterns, particularly in relation to the distribution along the latitudinal profiles and the global geographical relationships of the country's genera. The consequences of these relations for the evolution of the Chilean Flora are discussed.

This book will provide a valuable resource for both graduate students and researchers in botany plant taxonomy and systematics biogeography evolutionary biology and plant conservation The Distributed Functions of Emergency Management and Homeland Security David A. McEntire, 2023-07-19 The Distributed Functions of Emergency Management and Homeland Security outlines the roles and responsibilities of various individuals and agencies involved in homeland security and all aspects of emergency management Each chapter focuses on the practical and applied aspects of a range of public servants in various departments and the organizations that they represent Rather than presenting a theoretical exploration alone the book examines the practical knowledge and hands on skills related to various functions and how their decisions and actions play into the larger framework of safety and security in the public private and nonprofit sectors Every professional has a unique and integral part to play in fulfilling their roles and obligations whether it be in relation to prevention mitigation preparedness response or recovery operations Personnel that frequently come to mind in such scenarios include emergency managers geographers and land use planners EMTs and paramedics fire fighters police officers public health officials nurses public administrators and public information officers And while these individuals are integral to homeland security and emergency management there are other professionals that also perform essential duties that while they aren't first to mind are vital to efforts relating to terrorism and disasters this includes pilots in the aviation sector the military attorneys psychologists and forensic professionals serving in pathology DNA and dentistry roles Chapters provide a holistic rendering of the homeland security and emergency management landscape to present all these various professional capabilities and contributions This includes how current functions are coordinated as well as how future efforts might change relative to a more proactive all hazards and holistic approach As such the book will be a useful resource for students and practitioners to understand the dynamic professions and various disciplines and fields that impact disaster and terrorism preparedness and response capabilities
