Computer-Aided Geometric Design Fujio Yamaguchi, 2002-10-14 Computer graphics computer aided design and computer aided manufacturing are tools that have become indispensable to a wide array of activities in contemporary society Euclidean processing provides the basis for these computer aided design systems although it contains elements that inevitably lead to an inaccurate non robust and complex system The primary cause of the deficiencies of Euclidean processing is the division operation which becomes necessary if an n space problem is to be processed in n space The difficulties that accompany the division operation may be avoided if processing is conducted entirely in $n-1$ space The paradigm attained through the logical extension of this approach totally four dimensional processing is the subject of this book This book offers a new system of geometric processing techniques that attain accurate robust and compact computations and allow the construction of a systematically structured CAD system

Knowledge Intensive CAD Martti Mäntylä, Susan Finger, Tetsuo Tomiyama, 2013-03-19 Computer Aided Design CAD technology plays a key role in today's advanced manufacturing environment To reduce the time to market achieve zero defect quality the first time and use available production and logistics resources effectively product and design process knowledge covering the whole product life cycle must be used throughout product design Once generated this intensive design knowledge should be made available to later life cycle activities Due to the increasing concern about global environmental issues and rapidly changing economical situation worldwide design must exhibit high performance not only in quality and productivity but also in life cycle issues including extended producer's liability These goals require designers and engineers to use various kinds of design knowledge intensively during product design and to generate design information for use in later stages of the product life cycle such as production distribution operation maintenance reclamation and recycling Therefore future CAD systems must incorporate product and design process knowledge which are not explicitly dealt with in the current systems in their design tools and design object models
