Nieschlag,E. Nieschlag,Ursula-F. Habenicht,2013-04-17 Investigations into the mechanisms of spennatogenesis sperm matura tion and fertilization provide the basis of our understanding of male re productive physiology Since in recent years molecular and cellular en docrinology has

provided particularly important contributions to our knowledge the European Workshops on Molecular and Cellular Endocrinology of the Testis held regularly during even years since 1980 have become a prominent forum for researchers in the field to discuss recent findings and exchange new ideas The most recent of these Testis Workshops the 7th was held on May 5-10 1992 at Castle Elmau in the Bavarian Alps The main lectures of this Workshop form the core of this book In order to provide a broader view of the current status of male reproduction research this volume also contains the proceedings of the Schering Foundation Workshop on Basic Mechanisms of Reproduction and Male Fertility Control which was held in Berlin on October 31 to November 2 1991 The topics of the two meetings were planned to complement each other By combining the proceedings of both workshops it became possible to produce a book that covers a wide spectrum of current highlights in male reproduction research and provides the reader with an up to date review of the field The timeliness of the book is emphasized by the fact that it was already available when the 7th European Testis Workshop took place

**The Sodium-Hydrogen Exchanger** Morris Karmazyn, Metin Avkiran, Larry Fliegel,2012-12-06 I am extremely honored and pleased to have the opportunity to write a few introductory words for this timely volume on Na<sup>+</sup> exchange This is a field of investigation that I entered into by challenge and necessity embraced with passion and finally left in my quest for new discoveries in growth control Ten years one third of my scientific life has been devoted to uncovering the mysteries of intracellular pH regulation with respect to growth factor action I got started on this new topic in 1980 when I heard a rather provocative hypothesis presented by Enrique Rozengurt at an ICN UCLA Keystone meeting on Cell Surface and Malignancy He showed that all mitogens induced amiloride sensitive Na<sup>+</sup> entry into resting cells and proposed that if a compound stimulates Na<sup>+</sup> influx it could be a mitogen In support of his proposal Enrique reported that the amphipathic polypeptide melittin which induced Na<sup>+</sup> influx was indeed mitogenic for 3T3 cells This was only correlation at this stage However I was fascinated by this talk I immediately approached Enrique to inform him of my skepticism about this beautiful story and to indicate that I would only be convinced when I succeeded in isolating mutant fibroblasts lacking the amiloride sensitive Na<sup>+</sup> transporter Good luck was his response

**Elements of Mammalian Fertilization: Basic concepts** ,1991 *The Enzyme Reference* Daniel L. Purich,R. **Advances in Developmental Biochemistry** Paul Wassarman,1999-04-01 This series provides annual reviews of research topics in developmental biology biochemistry written from the perspectives of leading investigators in these fields This volume of Advances in Developmental Biochemistry consists of seven chapters that review specific aspects of development in several different organisms including mollusks flies and mice

**Meiosis and Gametogenesis** ,1997-11-24 In spite of the fact that

the process of meiosis is fundamental to inheritance surprisingly little is understood about how it actually occurs There has recently been a flurry of research activity in this area and this volume summarizes the advances coming from this work All authors are recognized and respected research scientists at the forefront of research in meiosis Of particular interest is the emphasis in this volume on meiosis in the context of gametogenesis in higher eukaryotic organisms backed up by chapters on meiotic mechanisms in other model organisms The focus is on modern molecular and cytological techniques and how these have elucidated fundamental mechanisms of meiosis Authors provide easy access to the literature for those who want to pursue topics in greater depth but reviews are comprehensive so that this book may become a standard reference

**Key Features** Comprehensive reviews that taken together provide up to date coverage of a rapidly moving field Features new and unpublished information Integrates research in diverse organisms to present an overview of common threads in mechanisms of meiosis Includes thoughtful consideration of areas for future investigation

*Molecular and Cellular Endocrinology of the Testis* G. Verhoeven, U.-F. Habenicht, 2013-06-29 The European Workshops on Molecular and Cellular Endocrinology of the Testis have become by now a well established tradition Thanks to their special format the quality of the main lectures and miniposters and the vivid discussions they enjoy the ever increasing interest and active participation of all European scientists working in the field Moreover since the very beginning they have attracted investigators from all over the world The most recent Testis Workshop was held in De Panne Belgium from 27-3 March 1994 As always the frame work of the workshop was provided by a series of lectures delivered by a panel of internationally recognized authorities These lectures are gathered in the present volume of the Ernst Schering Foundation Workshop series Together with the Miniposter book they constitute an excellent written account of the Proceedings of the 8th European Testis Workshop The testis undoubtedly represents one of the most complex and intriguing tissues in the body Both its endocrine function the secretion of male sex hormones and its exocrine role the production of mature spermatozoa continue to raise startling questions to clinicians physiologists endocrinologists and scientists involved in fundamental research Few organs maintain and support a differentiation process as complicated as spermatogenesis few tissues continually display both mitotic and meiotic cell cycles in such a stringently controlled fashion or a comparable need for coordinated endocrine and local control
