Identification Of Cellular Automata:

Identification Of Cellular Automata Andrew I. Adamatzky, 1994-11-25 This book presents the foundation and development of the theory of cellular automata identification and its application to natural systems It first sets out the known and proposes the new classes of cellular automata Numerous examples are included for ease of understanding It then deals with the designs of algorithms for cellular automata identification Conceptual questions of automata theory are next addressed and the focus is shifted from synthesis to analysis and from pronostication to accurate factorization Finally the author discusses a number of naturally occurring specific instances with a view to expanding and transforming current ideas on cellular automata practice

Stephen A. Billings, 2013-07-29 *Nonlinear System Identification NARMAX Methods in the Time Frequency and Spatio Temporal Domains* describes a comprehensive framework for the identification and analysis of nonlinear dynamic systems in the time frequency and spatio temporal domains This book is written with an emphasis on making the algorithms accessible so that they can be applied and used in practice Includes coverage of The NARMAX nonlinear autoregressive moving average with exogenous inputs model The orthogonal least squares algorithm that allows models to be built term by term where the error reduction ratio reveals the percentage contribution of each model term Statistical and qualitative model validation methods that can be applied to any model class Generalised frequency response functions which provide significant insight into nonlinear behaviours A completely new class of filters that can move split spread and focus energy The response spectrum map and the study of sub harmonic and severely nonlinear systems Algorithms that can track rapid time variation in both linear and nonlinear systems The important class of spatio temporal systems that evolve over both space and time Many case study examples from modelling space weather through identification of a model of the visual processing system of fruit flies to tracking causality in EEG data are all included to demonstrate how easily the methods can be applied in practice and to show the insight that the algorithms reveal even for complex systems NARMAX algorithms provide a fundamentally different approach to nonlinear system identification and signal processing for nonlinear systems NARMAX methods provide
