## **Electronic Navigation:**

**Electronic Navigation Systems** Laurie Tetley, David Calcutt, 2007-06-07 Maritime navigation has rapidly developed since the publication of the last edition of the title with methods of global position fixing for shipping becoming standardized. As in the previous two editions this edition will provide a sound basis for the understanding of modern navigation systems and brings the student or professional up to date with the latest developments in technology and the growing standardization of maritime navigation techniques. Developed with close scrutiny from the US Merchant Marine Academy and the major maritime navigation centres in the UK, out dated techniques have been replaced by an expanded section on the now standard Navstar GPS systems and the Integrated Nav. In addition a new chapter on the application of electronic charts will also be included as well as problems at the end of each chapter with worked solutions.

**Marine Electronic Navigation** S. F. Appleyard, 1988-02-04 This 600 page textbook must be a good candidate for being the authoritative reference on its subject. This book reveals all through a good clear text amply illustrated. The authors and publisher are to be congratulated on an excellent production. The Naval Review Well organized clear and easy to read. The second edition has been enlarged with various items devoted to new electronic equipment now encountered by mariners especially those concerned with navigational and radiocommunication equipment. International Hydrographic Bulletin A major and standard text now much enlarged and revised with sections on radar communications, the gyro compass and all navigation systems encountered in merchant ships. Full and expert treatment of all aspects of electronic navigation and communication systems making it one of the leading references on its subjects. Lloyds List

Radar and Electronic Navigation G. J. Sonnenberg, 2013-10-22 Radar and Electronic Navigation Sixth Edition discusses radar in marine navigation, underwater navigational aids, direction finding, the Decca navigator system and the Omega system. The book also describes the Loran system for position fixing, the navy navigation satellite system and the global positioning system GPS. It reviews the principles, operation, presentations, specifications and uses of radar. It also describes GPS, a real time position fixing system in three dimensions: longitude, latitude, altitude, plus velocity information with Universal Time Coordinated (UTC). It is accurate to 100 meters for general users and about 16 meters for US and NATO users. GPS uses a constellation of 18 satellites encircling the Earth and measures velocity by means of the Doppler effect. The book explains that GPS has three segments: the space segment, the control segment, and the user segment. The control segment has four monitoring stations while the user segment includes ground based, marine, airborne or space platforms equipped with GPS devices. The book provides useful information for marine engineers, aviation designers, aeronautical engineers and operators as well as other officers of sea going vessels.
