Elements Of The Geometry And Topology Of Minimal Surfaces In Three Dimensional Space:

Elements of the Geometry and Topology of Minimal Surfaces in Three-dimensional Space A. A. Tuzhilin, 1991

This book grew out of lectures presented to students of mathematics physics and mechanics by A T Fomenko at Moscow University under the auspices of the Moscow Mathematical Society The book describes modern and visual aspects of the theory of minimal two dimensional surfaces in three dimensional space The main topics covered are topological properties of minimal surfaces stable and unstable minimal films classical examples the Morse Smale index of minimal two surfaces in Euclidean space and minimal films in Lobachevskian space Requiring only a standard first year calculus and elementary notions of geometry this book brings the reader rapidly into this fascinating branch of modern geometry

Tuzhilin, 2005 This book grew out of lectures presented to students of mathematics physics and mechanics by A T Fomenko at Moscow University under the auspices of the Moscow Mathematical Society The book describes modern and visual aspects of the theory of minimal two dimensional surfaces in three dimensional space The main topics covered are topological properties of minimal surfaces stable and unstable minimal films classical examples the Morse Smale index of minimal two surfaces in Euclidean space and minimal films in Lobachevskian space Requiring only a standard first year calculus and elementary notions of geometry this book brings the reader rapidly into this fascinating branch of modern geometry

Knots, Links, Braids and 3-Manifolds

Viktor Vasil'evich Prasolov, Aleksei Bronislavovich Sosinskiĭ, 1997 This book is an introduction to the remarkable work of Vaughan Jones and Victor Vassiliev on knot and link invariants and its recent modifications and generalizations including a mathematical treatment of Jones Witten invariants The mathematical prerequisites are minimal compared to other monographs in this area Numerous figures and problems make this book suitable as a graduate level course text or for self study

Introduction to the Theory of Linear Nonselfadjoint Operators Israel Gohberg, Mark Grigor'evich Kreĭn, 1978

An Introduction to Algebraic Geometry Kenji Ueno, 1997 This introduction to algebraic geometry allows readers to grasp the fundamentals of the subject with only linear algebra and calculus as prerequisites After a brief history of the subject the book introduces projective spaces and projective varieties and explains plane curves and resolution of their singularities The volume further develops the geometry of algebraic curves and treats congruence zeta functions of algebraic curves over a finite field It concludes with a complex analytical discussion of algebraic curves The author emphasizes computation of concrete examples rather than proofs and these examples are discussed from various viewpoints This approach allows readers to develop a deeper understanding of the theorems

Minimal Networks The Steiner Problem and Its

Generalizations Alexander O. Ivanov, Alexei A. Tuzhilin, 1994-03-16 This book focuses on the classic Steiner Problem and illustrates how results of the problem's development have generated the Theory of Minimal Networks that is systems of

rubber branching threads of minimal length This theory demonstrates a brilliant interconnection among differential and computational geometry topology variational calculus and graph theory All necessary preliminary information is included and the book's simplified format and nearly 150 illustrations and tables will help readers develop a concrete understanding of the material All nontrivial statements are proved and plenty of exercises are included The Parsimonious Universe Stefan Hildebrandt, Anthony Tromba, 1996-07-18 Why does nature prefer some shapes and not others The variety of sizes shapes and irregularities in nature is endless Skillfully integrating striking full color illustrations the authors describe the efforts by scientists and mathematicians since the Renaissance to identify and describe the principles underlying the shape of natural forms But can one set of laws account for both the symmetry and irregularity as well as the infinite variety of nature's designs A complete answer to this question is likely never to be discovered Yet it is fascinating to see how the search for some simple universal laws down through the ages has increased our understanding of nature The Parsimonious Universe looks at examples from the world around us at a non mathematical non technical level to show that nature achieves efficiency by being stingy with the energy it expends **Complete Minimal Surfaces of Finite Total Curvature** Kichoon

Yang, 2013-03-09 This monograph contains an exposition of the theory of minimal surfaces in Euclidean space with an emphasis on complete minimal surfaces of finite total curvature Our exposition is based upon the philosophy that the study of finite total curvature complete minimal surfaces in R^3 in large measure coincides with the study of meromorphic functions and linear series on compact Riemann surfaces This philosophy is first indicated in the fundamental theorem of Chern and Osserman A complete minimal surface M immersed in R^3 is of finite total curvature if and only if M with its induced conformal structure is conformally equivalent to a compact Riemann surface M_g punctured at a finite set E of points and the tangential Gauss map extends to a holomorphic map $M_g \rightarrow P^2$ Thus a finite total curvature complete minimal surface in R^3 gives rise to a plane algebraic curve Let M_g denote a fixed but otherwise arbitrary compact Riemann surface of genus g A positive integer r is called a puncture number for M_g if M_g can be conformally immersed into R^3 as a complete finite total curvature minimal surface with exactly r punctures the set of all puncture numbers for M_g is denoted by $P(M_g)$ For example Jorge and Meeks JM showed by constructing an example g for each r that every positive integer r is a puncture number for the Riemann surface pl *Invariant Function Spaces on Homogeneous Manifolds of Lie Groups and Applications* Mark

L'vovich Agranovskiĭ, 1993-01-01 This book studies translation invariant function spaces and algebras on homogeneous manifolds The central topic is the relationship between the homogeneous structure of a manifold and the class of translation invariant function spaces and algebras on the manifold The author obtains classifications of translation invariant spaces and algebras of functions on semisimple and nilpotent Lie groups Riemann symmetric spaces and bounded symmetric domains When such classifications are possible they lead in many cases to new characterizations of the classical function spaces from the point of view of their group of admissible changes of variable The algebra of holomorphic functions plays an essential role

in these classifications when a homogeneous complex or CR structure exists on the manifold This leads to new characterizations of holomorphic functions and their boundary values for one and multidimensional complex domains

Nonlinear Poisson Brackets Mihail Vladimirovi_ Karasev,Viktor Pavlovi_ Maslov,American Mathematical Society,2012-06-06 This book deals with two old mathematical problems The first is the problem of constructing an analog of a Lie group for general nonlinear Poisson brackets The second is the quantization problem for such brackets in the semiclassical approximation which is the problem of exact quantization for the simplest classes of brackets These problems are progressively coming to the fore in the modern theory of differential equations and quantum theory since the approach based on constructions of algebras and Lie groups seems in a certain sense to be exhausted The authors main goal is to describe in detail the new objects that appear in the solution of these problems Many ideas of algebra modern differential geometry algebraic topology and operator theory are synthesized here The authors prove all statements in detail thus making the book accessible to graduate students

Control of Systems with Aftereffect Vladimir Borisovich Kolmanovskii,Leonid Efimovich Shaikhmet,1996-01-01 Deterministic and stochastic control systems with aftereffect are considered Necessary and sufficient conditions for the optimality of such systems are obtained Various methods for the construction of exact and approximate solutions of optimal control problems are suggested Problems of adaptive control for systems with aftereffect are analyzed Numerous applications are described The book can be used by researchers engineers and graduate students working in optimal control theory and various applications

Gaussian Processes Takeyuki Hida,Masuyuki Hitsuda,

Discreteness and Continuity in Problems of Chaotic Dynamics Michael L. Blank,1997-01-01 This book presents the study of ergodic properties of so called chaotic dynamical systems One of the central topics is the interplay between deterministic and quasi stochastic behaviour in chaotic dynamics and between properties of continuous dynamical systems and those of their discrete approximations Using simple examples the author describes the main phenomena known in chaotic dynamical systems studying topics such as the operator approach in chaotic dynamics stochastic stability and the so called coupled systems The last two chapters are devoted to problems of numerical modeling of chaotic dynamics

Linear and Nonlinear Perturbations of the Operator Div Viktor Grigor'evich Osmolovskii,1997-01-01 This book presents results on boundary value problems for L and the theory of nonlinear perturbations of L Specifically necessary and sufficient solvability conditions in explicit form are found for various boundary value problems for the operator L an analog of the Weyl decomposition is proved

Mathematics of Fractals Masaya Yamaguchi,Masayoshi Hata,Jun Kigami,1997 For graduate and undergraduate students and researchers in mathematics explains the notion behind the self similar sets called fractals and chaotic dynamical systems emphasizing the relationship between them Shows how the functions can be seen as solutions of certain boundary problems Also treats harmonic functions on fractal sets Includes exercises First published as Furakutaru no suri by Iwanami Shoten Tokyo in 1993 Annotation copyrighted by Book News Inc Portland OR

Tangents and Secants of Algebraic

Varieties F. L. Zak, 1993 The book is devoted to geometry of algebraic varieties in projective spaces Among the objects considered in some detail are tangent and secant varieties Gauss maps dual varieties hyperplane sections projections and varieties of small codimension Emphasis is made on the study of interplay between irregular behavior of higher secant varieties and irregular tangencies to the original variety Classification of varieties with unusual tangential properties yields interesting examples many of which arise as orbits of representations of algebraic groups **ABSTRACT Introduction to**

Complex Analysis Junjiro Noguchi, 2008-04-09 This book describes a classical introductory part of complex analysis for university students in the sciences and engineering and could serve as a text or reference book It places emphasis on rigorous proofs presenting the subject as a fundamental mathematical theory The volume begins with a problem dealing with curves related to Cauchy's integral theorem To deal with it rigorously the author gives detailed descriptions of the homotopy of plane curves Since the residue theorem is important in both pure and applied mathematics the author gives a fairly detailed explanation of how to apply it to numerical calculations this should be sufficient for those who are studying complex analysis as a tool

Embeddings and Immersions Masahisa Adachi, 2012-11-07 This book covers fundamental techniques in the theory of imbeddings and immersions emphasizing clear intuitive understanding and containing many figures and diagrams Adachi starts with an introduction to the work of Whitney and of Haefliger on imbeddings and manifolds The Smale-Hirsch theorem is presented as a generalization of the classification of imbeddings by isotopy and is extended by Gromov's work on the subject including Gromov's convex integration theory Finally as an application of Gromov's work the author introduces Haefliger's classification theorem of foliations on open manifolds Also described here is the Adachi's work with Landweber on the integrability of almost complex structures on open manifolds This book would be an excellent text for upper division undergraduate or graduate courses Nothing provided

Sign-based Methods in Linear Statistical Models M. V. Boldin, Galina I. Simonova, I_Uri_Nikolaevich Ti_urin, 1997-04-22 For nonparametric statistics the last half of this century was the time when rank based methods originated were vigorously developed reached maturity and received wide recognition The rank based approach in statistics consists in ranking the observed values and using only the ranks rather than the original numerical data In fitting relationships to observed data the ranks of residuals from the fitted dependence are used The signed based approach is based on the assumption that random errors take positive or negative values with equal probabilities Under this assumption the sign procedures are distribution free These procedures are robust to violations of model assumptions for instance to even a considerable number of gross errors in observations In addition sign procedures have fairly high relative asymptotic efficiency in spite of the obvious loss of information incurred by the use of signs instead of the corresponding numerical values In this work sign based methods in the framework of linear models are developed In the first part of the book there are linear and factor models involving independent observations In the second part linear models of time series primarily autoregressive models are considered
