of fiber optics terms and definitions NBS Handbook 140 Optical Waveguide Communications Glossary was issued in 1982 by the National Bureau of Standards now the National Institute of Standards and Technology Since then several publications by standards bodies contained fiber optics terms and definitions In 1984 the Institute of Electrical and Electronic Engineers published IEEE Standard 812 1984 Definitions of Terms Relating to Fiber Optics In 1986 the National Communication System published Federal Standard FED STD I037A Glossary of Telecommunication Terms containing about 100 fiber optics terms and definitions In 1988 the Electronic Industries Association issued EIA 440A Fiber Optic Terminology All of these works were based on NBS Handbook 140 compiled 10 years earlier Currently the International Electrotechnical Commission is preparing IEC Draft 731 Optical Communications Terms and Definitions Work in fiber optics terminology is being contemplated in the International Organization for Standardization and the International Telecommunications Union None of these works constitutes a comprehensive coverage of the field of fiber optics Each was prepared by professional people representing specific interest groups Each work was aimed at specific audiences research activities development activities manufacturers scientists engineers and so on Their content is devoted primarily to fundamental scientific and technical principles and theory rather than state of the art and advanced technology

Optical Fiber Sensor Technology L.S. Grattan, B.T. Meggitt, 2013-03-09 Systems and Applications in Optical Fiber Sensor Technology The essential technology which underpins developments in optical fiber sensors continues to expand and continues to be driven to a very large extent by advances in optoelectronics which have been produced for the ever expanding optical communications systems and networks of the world The steps forward in the technology often accompanied by a reduction in the price of associated components have been and continue to be adapted for use in a wide variety of optical fiber sensor systems These include for example the use of photoinduced gratings as fiber sensor components coupled with the wider availability of shorter wavelength lasers bright luminescent sources and high sensitivity detectors which have opened up new possibilities for both novel fiber optic sensor applications and new sensing systems This is to be welcomed at a time when coupled with integrated optic miniaturized devices and detectors real possibilities of systems integration at lower cost and increased utility can be offered The fiber laser and the expansions of the types and availability of the doped fiber on which it is based offer further examples of the integration of the essential components of advanced optical sensor systems fitted for a new range of applications
