**Integrating Ecohydraulics in River Restoration** José Maria Santos, Isabel Boavida, 2020-03-16 Rivers have been intensively degraded due to increasing anthropogenic impacts from a growing population in a continuously developing world Accordingly most rivers suffer from pressures as a result of increasing dam and weir construction habitat degradation flow regulation water pollution abstraction and the spread of invasive species Science based knowledge regarding solutions to counteract the effects of river degradation and melding principles of aquatic ecology and engineering hydraulics is thus urgently needed to guide present and future river restoration actions This Special Issue gathers a coherent set of studies from different geographic contexts on fundamental and applied research regarding the integration of ecohydraulics in river restoration ranging from field studies to laboratory experiments that can be applied to real world challenges It contains 13 original papers covering ecohydraulic issues such as river restoration technologies sustainable hydropower fish passage designs and operational criteria and habitat modeling All papers were reviewed by international experts in ecology hydraulics aquatic biology engineering geomorphology and hydrology The papers herein well represent the wide applicability of ecohydraulics in river restoration and serve as a basis to improve current knowledge and management and to reduce arguments between different interests and opinions

*Information Technology Security and Risk Management* Stephen C. Wingreen, Amelia Samandari, 2024-05-16 Information Technology Security and Risk Management Inductive Cases for Information Security is a compilation of cases that examine recent developments and issues that are relevant to IT security managers risk assessment and management and the broader topic of IT security in the 21st century As the title indicates the cases are written and analyzed inductively which is to say that the authors allowed the cases to speak for themselves and lead where they would rather than approach the cases with presuppositions or assumptions regarding what the case should be about In other words the authors were given broad discretion to interpret a case in the most interesting and relevant manner possible any given case may be about many things depending on the perspective adopted by the reader and many different lessons may be learned The inductive approach of these cases reflects the design philosophy of the advanced IT Security and Risk Management course we teach on the topic here at the University of Canterbury where all discussions begin with the analysis of a specific case of interest and follow the most interesting and salient aspects of the case in evidence In our course the presentation analysis and discussion of a case are followed by a brief lecture to address the conceptual theoretical and scholarly dimensions arising from the case The inductive approach to teaching and learning also comes with a huge advantage the students seem to love it and often express their appreciation for a fresh and engaging approach to learning the sometimes highly technical content of an IT security course As instructors we are also grateful for the break in the typical scripted chalk and talk of a university lecture afforded

by the spontaneity of the inductive approach We were motivated to prepare this text because there seems to be no other book of cases dedicated to the topic of IT security and risk management and because of our own success and satisfaction with inductive teaching and learning We believe this book would be useful either for an inductive case based course like our own or as a body of cases to be discussed in a more traditional course with a deductive approach There are abstracts and keywords for each case which would help instructors select cases for discussions on specific topics and PowerPoint slides are available as a guide for discussion about a given case
