Identification and System Parameter Estimation 1982 G. A. Bekey, G. N. Saridis, 2016-06-06 Identification and System Parameter Estimation 1982 covers the proceedings of the Sixth International Federation of Automatic Control IFAC Symposium The book also serves as a tribute to Dr Naum S Rajbman The text covers issues concerning identification and estimation such as increasing interrelationships between identification estimation and other aspects of system theory including control theory signal processing experimental design numerical mathematics pattern recognition and information theory The book also provides coverage regarding the application and problems faced by several engineering and scientific fields that use identification and estimation such as biological systems traffic control geophysics aeronautics robotics economics and power systems Researchers from all scientific fields will find this book a great reference material since it presents topics that concern various disciplines *Identification of Continuous-Time Systems* N.K. Sinha, G.P. Rao, 2012-12-06 In view of the importance of system identification the International Federation of Automatic Control IFAC and the International Federation of Operational Research Societies IFORS hold symposia on this topic every three years Interest in continuous time approaches to system identification has been growing in recent years This is evident from the fact that the of invited sessions on continuous time systems has increased from one in the 8th number Symposium that was held in Beijing in 1988 to three in the 9th Symposium in Budapest in 1991 It was during the 8th Symposium in August 1988 that the idea of bringing together important results on the topic of Identification of continuous time systems was conceived Several distinguished colleagues who were with us in Beijing at that time encouraged us by promising on the spot to contribute to a comprehensive volume of collective work Subsequently we contacted colleagues all over the world known for their work in this area with a formal request to contribute to the proposed volume The response was prompt and overwhelmingly encouraging We sincerely thank all the authors for their valuable contributions covering various aspects of identification of continuous time systems Nonlinear System Identification Stephen A. Billings, 2013-09-23 Nonlinear System Identification NARMAX Methods in the Time Frequency and Spatio Temporal Domains describes a comprehensive framework for the identification and analysis of nonlinear dynamic systems in the time frequency and spatio temporal domains This book is written with an emphasis on making the algorithms accessible so that they can be applied and used in practice Includes coverage of The NARMAX nonlinear autoregressive moving average with exogenous inputs model The orthogonal least squares algorithm that allows models to be built term by term where the error reduction ratio reveals the percentage contribution of each model term Statistical and qualitative model validation methods that can be applied to any model class Generalised frequency response functions which provide significant insight into nonlinear behaviours A completely new class of filters that can move split spread and focus energy The response spectrum map and the study of sub harmonic and severely nonlinear systems Algorithms that can track rapid time variation in both linear and nonlinear systems

The important class of spatio temporal systems that evolve over both space and time Many case study examples from modelling space weather through identification of a model of the visual processing system of fruit flies to tracking causality in EEG data are all included to demonstrate how easily the methods can be applied in practice and to show the insight that the algorithms reveal even for complex systems NARMAX algorithms provide a fundamentally different approach to nonlinear system identification and signal processing for nonlinear systems NARMAX methods provide models that are transparent which can easily be analysed and which can be used to solve real problems This book is intended for graduates postgraduates and researchers in the sciences and engineering and also for users from other fields who have collected data and who wish to identify models to help to understand the dynamics of their systems [NASA Technical Note](#) United States. Recursive Estimation and Time-Series Analysis Peter C. Young, 2011-08-04 This is a revised version of the 1984 book of the same name but considerably modified and enlarged to accommodate the developments in recursive estimation and time series analysis that have occurred over the last quarter century Also over this time the CAPTAIN Toolbox for recursive estimation and time series analysis has been developed at Lancaster for use in the Matlab™ software environment see Appendix G Consequently the present version of the book is able to exploit the many computational routines that are contained in this widely available Toolbox as well as some of the other routines in Matlab™ and its other toolboxes The book is an introductory one on the topic of recursive estimation and it demonstrates how this approach to estimation in its various forms can be an impressive aid to the modelling of stochastic dynamic systems It is intended for undergraduate or Masters students who wish to obtain a grounding in this subject or for practitioners in industry who may have heard of topics dealt with in this book and while they want to know more about them may have been deterred by the rather esoteric nature of some books in this challenging area of study
