WORKING CONDITIONS FOR TEACHING SCIENCE AND MATHEMATICS

Resources for Teaching Science and Mathematics

Effective teaching is best sustained if schools are places where professional teachers like to work and places that provide support for activities that characterize effective teaching. Consequently, it is important to develop indicators of the extent to which the nation's schools are able to provide the resources and support needed to sustain fully professional teaching of science and mathematics for all students. For reasons explained in Chapter 8, the committee does not recommend the collection of data on per-pupil expenditures devoted to science and mathematics or on specific budgets available to science and mathematics teachers. What we do see as important, however, is to collect detailed information on the uses to which money devoted to mathematics and science instruction is put within a school and within a classroom.

The following information on working conditions in schools is pertinent:

- the availability and use of equipment, materials, textbooks, and laboratory facilities appropriate to the intended curriculum;
- the number of students and different types of courses taught by each teacher;
- the availability and use of professional time for planning during school hours, and support for professional activities (further education, curriculum development, collegial exchanges) during the year and during summers; and
- the availability and use of assistance such as classroom or laboratory aides.

At first glance, this information may appear relatively easy to collect using closed-ended questionnaires. This may not be the case, however, for several reasons. First, the mere presence of a facility or materials and equipment does not ensure their use. Even in 1965, most secondary schools had, for example, some facility that was called a laboratory (Coleman et al., 1966). Analyses of the data indicated relatively minor differences among schools in the number of facilities. Most analysts believe, however, that in 1965 and in 1987

Towards Coherence Between Classroom Assessment and Accountability National Society for the Study of Education,2004-04-15 In analyses of the role of national educational assessment insufficient attention has been paid to the central place of the classroom Rather than encouraging a two way flow of information today s standards based frameworks tend to direct the flow of accountability from the outside into the classroom The authors of this volume emphasize that assessment as it exists in schools today consists mainly of the measurements that teachers themselves design evaluate and act upon every day Improving the usefulness of assessment in schools primarily requires assisting and harnessing this flood of assessment information both as a means of learning within the classroom and as the source of crucial information flowing out of classrooms This volume aims to encourage debate and reflection among educational researchers professionals and policymakers Five source chapters describe successful classroom assessment models developed in partnership with teachers while additional commentaries give a range of perspectives on the issues of classroom assessment standardized testing and accountability
