In Gravity's Pull:

Gravity's Time C. S. Unnikrishnan, 2022-04-27 This book is unique and exceptional in dealing with the notion of physical time rigorously both logically and empirically The central theme is the intimate relation between physical time and cosmic gravity It establishes and explains in an accessible manner the one crucial physical fact that has been missed in the development of modern physics that the enormous gravity of the matter and energy in the Universe is the controller and cause of the relativistic time The material in the book is accurate and free of the ambiguities in the discussion of time and its modifications dilation synchronization of clocks and simultaneity The contents go beyond the current theories of relativity that fail to incorporate the cosmic gravity in their structure The discussion of clocks in satellite navigational systems like the GPS is the most complete and accurate The book offers several new insights and it is the only available treatise on the complete physical truth about time The contents are addressed to a wide range of readers from general readers and students to experienced researchers and will also appeal well to philosophers and historians of physics This book has the enabling quality to deal with difficult questions about physical time with unprecedented clarity and without paradoxes **Gravity:**

Decoding the Periodic Table Jurjen Van Van der Wal, 2010-06-16 Decoding the Periodic Table In the year 1809 Russian Chemist Dimitri Ivanovich Mendeleev published the first Chemical Periodic Table of the Elements Since then scientists developed a theory that every element consists of a tightly packed mass of protons and neutrons which is surrounded by concentric spheres which are occupied by orbiting electrons This concept is known as the Standard Model but it is flawed because it cannot accommodate gravity For many decades researchers including this author in the late 1960 s tried to formulate theories that in a comprehensive way would unite all physical designs and phenomena under a common denominator but to no avail The String Theory is one of them but it has found no success In 1989 the author of the book made a fresh start again with the notion that particles such as the proton neutron and electron would not be round but that they would have straight lined square or cubic configurations because the Periodic Table's had quadratic numbers in their quantities of elements such as Period 1 with 2 elements 2 x 12 Periods 2 3 8 2 x 22 Periods 4 5 18 2 x 32 and Period 6 7 32 2 x 42 This might indicate square structural relationships lets give it a try It worked it took 20 years to do it it was a fascinating journey falling down and getting up again and again working without a computer with all figures hand drawn and discovering that the forces that make the nuclear mass of the neutron do that by multiplying two force filled cubic volumes as in $3F \cdot 6 \cdot 3F \cdot 3 \cdot 3 \cdot 3F \cdot 3F \cdot 3F$ 1838 2656

A Film-Philosophy of Ecology and Enlightenment Rupert Read, 2018-10-17 Inspired by the philosophy of Wittgenstein and his idea that the purpose of real philosophical thinking is not to discover something new but to show in a strikingly different light what is already there this book provides philosophical readings of a number of arthouse and Hollywood films Each chapter contains a discussion of two films one explored in greater detail and the other analyzed as a minor key which reveals the possibility for the book's ideas to be applied across different films registers and genres The readings are not only interpretive but they offer a way of thinking and feeling about with and through films which is genuinely transformative Rupert Read's main contention is that certain films can bring about a change in how we see the world He advocates an ecological approach to film philosophy analysis arguing that film can re shape the viewer's relationship to the environment and other living beings The transformative wake up call of these films is enlightenment in its true sense The result is a book that ambitiously aims to change though film how we think of ourselves and our place in the world at a time when such change is more needed than ever before

Artificial Gravity Gilles Clément,Angeli Bukley,2007-05-28 William H Paloski Ph D Human Adaptation and Countermeasures Office NASA Johnson Space Center Artificial gravity is an old concept having gotten its start in the late 19th century when Konstantin Tsiolkovsky considered by many to be the father of the Russian space program realized that the human body might not respond well to the free fall of orbital space flight To solve this problem he proposed that space stations be rotated to create centripetal accelerations that might provide inertial loading similar to terrestrial gravitational loading Einstein later showed in his equivalence principle that acceleration is indeed indistinguishable from gravity Subsequently other individuals of note including scientists like Werner von Braun as well as artists like Arthur C Clarke and Stanley Kubrick devised elaborate solutions for spinning vehicles to provide artificial gravity that would offset the untoward physiological consequences of spaceflight By 1959 concerns about the then unknown human responses to spaceflight drove NASA to consider the necessity of incorporating artificial gravity in its earliest human space vehicles Of course owing in part to the relatively short durations of the planned missions artificial gravity was not used in the early NASA programs
