Success in the Urban Classroom ,2002 **Resources in Education** ,1994 **The Classification of Quadrilaterals** Zalman Usiskin, 2008-01-01 This monograph reports on an analysis of a small part of the mathematics curriculum the definitions given to quadrilaterals This kind of research which we call micro curricular analysis is often undertaken by those who create curriculum but it is not usually done systematically and it is rarely published Many terms in mathematics education can be found to have different definitions in mathematics books Among these are natural number parallel lines and congruent triangles trapezoid and isosceles trapezoid the formal definitions of the trigonometric functions and absolute value and implicit definitions of the arithmetic operations addition subtraction multiplication and division Yet many teachers and students do not realize there is a choice of definitions for mathematical terms And even those who realize there is a choice may not know who decides which definition of any mathematical term is better and under what criteria Finally rarely are the mathematical implications of various choices discussed As a result many students misuse and otherwise do not understand the role of definition in mathematics We have chosen in this monograph to examine a bit of mathematics for its definitions the quadrilaterals We do so because there is some disagreement in the definitions and consequently in the ways in which quadrilaterals are classified and relate to each other The issues underlying these differences have engaged students teachers

mathematics educators and mathematicians There have been several articles and a number of essays on the definitions and classification of quadrilaterals But primarily we chose this specific area of definition in mathematics because it demonstrates how broad mathematical issues revolving around definitions become reflected in curricular materials While we were undertaking this research we found that the area of quadrilaterals supplied grist for broader and richer discussions than we had first anticipated The intended audience includes curriculum developers researchers teachers teacher trainers and anyone interested in language and its use **Announcer** American Association of Physics Teachers,1997 **Christian Home Educators' Curriculum Manual** Cathy Duffy,1995-07 Cathy Duffy draws upon her many years of home education experience both in teaching and researching curriculum to bring us the most thorough and useful book available on teaching teenagers at home **Teaching Mathematics in Secondary and Middle School** James S. Cangelosi,2003 For courses in secondary or middle school math This text focuses on all the complex aspects of teaching mathematics in today s classroom and the most current NCTM standards It demonstrates how to creatively incorporate the standards into teaching along with inquiry based instructional strategies Using one expansive case study that follows a mathematics teacher through his first year in the profession the text illustrates how to lead pupils toward meaningful mathematics and strategies for developing mathematics skills Interactive in its approach the text includes an abundance of illustrative examples mini case studies cooperative learning activities field based activities and transitional activities *Assessment that Informs Practice* ,2000 Paperbound Books in Print ,1991 **Glencoe Mathematics** ,2001 **'American Book Publishing Record'** **Cumulative** R.
