Influences On Human Development:

Influences on Human Development Urie Bronfenbrenner, Maureen A. Mahoney, 1975

Development R.L. Baker, B.R. Mednick, University of California, 2012-12-06 This book is the product of the efforts of a number of people dating back to 1956 when Professor T Kemp then head of the University Institute for Human Genetics in Copenhagen proposed a study on the importance of x ray irradiation in pregnant women Under the guidance of Professors Dyhre Trolle and Preben Plum of the University Hospital in Copenhagen the investigation was expanded to deal with prenatal and perinatal factors of importance for the development of the infant The corpus of medical data that resulted from these efforts was collected and organized by Drs Bengt Zachau Christiansen and Aage Villumsen The project's birth cohort included all deliveries that took place at the State University Hospital Rigshospitalet Copenhagen over a two year period from 1959 to 1961 As part of the perinatal study the mothers and children were subjected to regular and thorough medical examinations during pregnancy and through the first year of the child's life The detailed data from these examinations as well as information about treatment administered were systematically collected and coded

Intellectual,

Scientific, and Educational Influences on Sustainability Research Turvey, Rosario Adapon, Kurissery, Sreekumari, 2019-06-28 Over the last few decades the new discipline of sustainability science SS has evolved with a phenomenal rise in knowledge production research and publications as well as the development of new academic programs and creation of centers and scientific communities networks and organizations With pressing global environmental issues in the 21st century SS has become an influential discipline and important subject of intellectual inquiry that deserves support from the academy and scientific communities worldwide to find solutions to global problems such as climate change environmental degradation and biodiversity loss Intellectual Scientific and Educational Influences on Sustainability Research is a concise and authoritative book that fills the crucial and unmet need for educational materials that integrates theoretical foundations methodological basis and practice in the science of sustainability The goal of the book is to increase accessibility and use of educational and scientific knowledge among academic and non academic audiences as it assembles the wisdom and insights from up to date scholarship and advances in this new discipline Highlighting various topics such as biodiversity public transportation and human development it is ideal for environmentalists ecologists technology developers policymakers academicians researchers and students Psychology and Social Policy Prof. Dr. Bilal Semih Bozdemir, Moreover economic structures have direct implications on the labor market which subsequently affects individual decision making related to employment career pathways and lifestyle choices In an economy with high unemployment rates or limited job opportunities individuals may confront challenges in pursuing their preferred career trajectories To mitigate these challenges they may adjust their expectations or settle for roles that do not align with their aspirations Decreased economic mobility often results in a host of behavioral adjustments including risk aversion which diminishes the willingness to invest in education or entrepreneurial ventures Another salient aspect is the role of socio economic status which is deeply intertwined with economic structures Individuals from disadvantaged economic backgrounds may not only face constraints in accessing educational and professional opportunities but may also adopt behavioral patterns that reflect their economic realities For instance people in lower socio economic strata may prioritize immediate financial needs over long term investments such as saving or education Thus decision making becomes a reflection of their situational constraints rather than an outcome of purely rational choice In understanding the relationship between economic structures and individual decision making it is crucial to consider the impact of government policies and regulations Economic policy decisions including taxation welfare provisions and labor regulations create a framework that defines the choices available to individuals For instance policies that promote entrepreneurship and innovation can enhance individual agency by providing the necessary resources and support Conversely restrictive policies may hinder individuals from pursuing certain opportunities or ambitions **Ethology and Human Development** John Archer, 1992-01-01 The developmental origins of human behavior are often seen as having parallels with the natural world of animal behavior Researchers in ethology the biological study of animal behavior have

amassed an enormous body of research but the psychological study of child development has often ignored the findings with the notable exception of John Bowlby's use of imprinting as a basis for a novel theory of human attachment. The author of this new book, a psychologist who has carried out research in ethology, evaluates the impact of several decades of ethological work on developmental psychology. He views human development from the context of the natural world, thereby re-establishing the links begun with Charles Darwin between research on child development and animal behavior. Chapters summarize important research on observational methods, animal models, social processes, sociobiology, the comparative method, non-verbal communication, and mental processes.

Pathways of Human Development Jay A. Mancini, Karen A. Roberto, 2009-08-20. Pathways of Human Development uses theoretical perspectives from developmental, social, and behavioral sciences to examine the many ways that individuals, families, and communities intersect and interface. Focusing on the impact of change on human development, including its antecedents, processes, and consequences, the chapters examine a range of topics such as health and adaptation, social anxiety, disorder, protective factors, and risk behaviors, parent-child relationships, adolescent sexuality, intergenerational relationships, family stress, and adaptation, and community resilience. By extending human development theorizing across these pivotal life-changing issues, this volume offers a comprehensive map of the trajectories of development among individuals, families, and communities.

Brain and Culture Bruce E. Wexler, 2008-08-29 Research shows that between birth and early adulthood the brain requires sensory stimulation to develop physically The nature of the stimulation shapes the connections among neurons that create the neuronal networks necessary for thought and behavior By changing the cultural environment each generation shapes the brains of the next By early adulthood the neuroplasticity of the brain is greatly reduced and this leads to a fundamental shift in the relationship between the individual and the environment during the first part of life the brain and mind shape themselves to the major recurring features of their environment by early adulthood the individual attempts to make the environment conform to the established internal structures of the brain and mind In Brain and Culture Bruce Wexler explores the social implications of the close and changing neurobiological relationship between the individual and the environment with particular attention to the difficulties individuals face in adulthood when the environment changes beyond their ability to maintain the fit between existing internal structure and external reality These difficulties are evident in bereavement the meeting of different cultures the experience of immigrants in which children of immigrant families are more successful than their parents at the necessary internal transformations and the phenomenon of interethnic violence Integrating recent neurobiological research with major experimental findings in cognitive and developmental psychology with illuminating references to psychoanalysis literature anthropology history and politics Wexler presents a wealth of detail to support his arguments The groundbreaking connections he makes allow for reconceptualization of the effect of cultural change on the brain and provide a new biological base from which to consider such social issues as culture wars and ethnic violence
