Mechanization of Reasoning in a Historical Perspective, 2023-03-13 This volume is written jointly by Witold Marciszewski who contributed the introductory and the three subsequent chapters and Roman Murawski who is the author of the next ones those concerned with the 19th century and the modern inquiries into formalization algebraization and mechanization of reasonings Besides the authors there are other persons as well as institutions to whom the book owes its coming into being The study which resulted in this volume was carried out in the Historical Section of the research project Logical Systems and Algorithms for Automatic Testing of Reasoning 1986 1990 in which participated nine Polish universities the project was coordinated by the Department of Logic Methodology and Philosophy of Science of the Białystok Branch of the University of Warsaw and supported by the Ministry of Education some of its results are reported in Szrednicki Ed 1987 The major part of the project was focussed on the software for computer aided theorem proving called Mizar MSE Multi Sorted first order logic with Equality reported in Marciszewski 1994a due to Dr Andrzej Trybulec He and other colleagues deserve a grateful mention for a hands on experience and theoretical stimulants owed to their collaboration      Program Verification Timothy T.R. Colburn, J.H. Fetzer, R.L. Rankin, 2012-12-06 Among the most important problems confronting computer science is that of developing a paradigm appropriate to the discipline Proponents of formal methods such as John McCarthy C A R Hoare and Edgar Dijkstra have advanced the position that computing is a mathematical activity and that computer science should model itself after mathematics Opponents of formal methods by contrast suggest that programming is the activity which is fundamental to computer science and that there are important differences that distinguish it from mathematics which therefore cannot provide a suitable paradigm Disagreement over the place of formal methods in computer science has recently arisen in the form of renewed interest in the nature and capacity of program verification as a method for establishing the reliability of software systems A paper that appeared in Communications of the ACM entitled Program Verification The Very Idea by James H Fetzer triggered an extended debate that has been discussed in several journals and that has endured for several years engaging the interest of computer scientists both theoretical and applied and of other thinkers from a wide range of backgrounds who want to understand computer science as a domain of inquiry The editors of this collection have brought together many of the most interesting and important studies that contribute to answering questions about the nature and the limits of computer science These include early papers advocating the mathematical paradigm by McCarthy Naur R Floyd and Hoare in Part I others that elaborate the paradigm by Hoare Meyer Naur and Scherlis and Scott in Part II challenges limits and alternatives explored by C Floyd Smith Blum and Naur in Part III and recent work focusing on formal verification by DeMillo Lipton and Perlis Fetzer Cohn and Colburn in Part IV It provides essential resources for further study This volume will appeal to scientists philosophers and laypersons who want to

understand the theoretical foundations of computer science and be appropriately positioned to evaluate the scope and limits of the discipline

Modeling with Rules Using Semantic Knowledge Engineering Grzegorz J. Nalepa, 2017-10-04 This book proposes a consistent methodology for building intelligent systems It puts forward several formal models for designing and implementing rules based systems and presents illustrative case studies of their applications These include software engineering business process systems Semantic Web and context aware systems on mobile devices Rules offer an intuitive yet powerful method for representing human knowledge and intelligent systems based on rules have many important applications However their practical development requires proper techniques and models a gap that this book effectively addresses
