Information Systems Reengineering:

Information Systems Reengineering Joseph Fong, Shi-Ming Huang, 1997-03 Reengineering in the context of this book involves the redesign or transformation of existing Information Systems while at the same time retaining as much of the original existing system as possible This approach has obvious benefits when it involves systems that can be automated and or supported by methods and tools This book focuses on the practical approaches to Information Systems Reengineering The two crucial technological areas covered include 1 the conversion of hierarchical or network database systems into relational database technology or from relational to object oriented databases and 2 the integration of database systems and expert systems to produce management information systems MIS and executive information systems EIS where the concepts the approach to be taken and the benefits gained are summarized The authors describe in detail database conversion techniques reverse and forward engineering and a reengineering methodology for information systems

Information Systems Reengineering, Integration and Normalization Joseph Shi Piu Fong, 2015-02-09 Taking a very practical approach the author describes in detail database conversion techniques reverse engineering forward engineering and re engineering methodologies for information systems offering a systematic software engineering approach for reusing existing database systems built with old technology He demonstrates how the existing systems can be transformed into the new technologies with the preservation of semantic constraints and without loss of information In this third edition with a new chapter on Data Normalization the author shows once the databases have been converted how to integrate them for consolidating information and how to normalize them so that they are efficient and user friendly Many examples illustrations and case studies together with questions and answers ensure that the methodology is easy to follow Ideal as a textbook for students studying information systems theories Information Systems Reengineering Integration and Normalization will also be a valuable management reference book for Information Technology Practitioners Additional material is available on www.extramaterials.com 978 3 319 12294 6

Information Systems Reengineering, Integration and Normalization Joseph S. P. Fong, Kenneth Wong Ting Yan, 2022-01-01 Database technology is an important subject in Computer Science Every large company and nation needs a database to store information The technology has evolved from file systems in the 60 s to Hierarchical and Network databases in the 70 s to relational databases in the 80 s object oriented databases in the 90 s and to XML documents and NoSQL today As a result there is a need to reengineer and update old databases into new databases This book presents solutions for this task In this fourth edition Chapter 9 Heterogeneous Database Connectivity HDBC offers a database gateway platform for companies to communicate with each other not only with their data but also via their database The ability of sharing a database can contribute to the applications of Big Data and surveys for decision support systems The HDBC gateway solution collects input from the database transfers the data into its middleware storage converts it into a common data format such as XML documents and then distributes them to the users HDBC transforms the common data into

the target database to meet the user's requirements acting like a voltage transformer hub. The voltage transformer converts the voltage to a voltage required by the users. Similarly, HDBC transforms the database to the target database required by the users. This book covers reengineering for data conversion, integration for combining databases and merging databases, and expert system rules normalization for eliminating duplicate data from the database and above all, HDBC connects all legacy databases to one target database for the users. The authors provide a forum for readers to ask questions and the answers are given by the authors and the other readers on the Internet.

Information Systems Reengineering for Modern Business Systems: ERP, Supply Chain and E-Commerce Management Solutions Valverde, Raul, Rao Talla, Malleswara, 2012-02-29
Businesses must constantly adapt to a dynamically changing environment that requires choosing an adaptive and dynamic information architecture that has the flexibility to support both changes in the business environment and changes in technology. In general, information systems reengineering has the objective of extracting the contents, data structures, and flow of data and process contained within existing legacy systems in order to reconstitute them into a new form for subsequent implementation. *Information Systems Reengineering for Modern Business Systems: ERP, Supply Chain and E-Commerce Management Solutions* covers different techniques that could be used in industry in order to reengineer business processes and legacy systems into more flexible systems capable of supporting modern trends such as Enterprise Resource Planning, ERP, supply chain management systems, and e-commerce. This reference book also covers other issues related to the reengineering of legacy systems which include risk management and obsolescence management of requirements.

Information Systems Reengineering and Integration Joseph Fong, 2006-08. Reengineering involves the re-design of an existing information system whilst utilising as much of the existing system as possible. This book takes a practical approach to re-engineering existing systems and looks at data integration and focuses on proven methods and tools. It also describes database conversion techniques in detail.

Information Systems Reengineering and Integration Joseph Fong, 2009-10-12. Taking a practical approach, this revised book describes database conversion techniques, reverse engineering, and forward engineering and re-engineering methodology for information systems, offering a systematic software engineering approach for reusing existing database systems built with old technology. Many examples, illustrations, and case studies are used, making the methodology easy to follow.

Database Reengineering and Interoperability T.Y. Cheung, J. Fong, B. Siu, 2012-12-06. Modern computing management systems and application programs are often designed as open systems. In an open environment, the users' application programs serving similar purposes though possibly implemented using different hardware or software technologies can interact easily and properly with one other. But it is a big challenge in research and development to provide the means for integrating these technologies and reengineering the new or existing management systems so as to make all of the relevant components interoperable. In case of databases, because of the variety in data models and theory, the interoperability and reengineering issues become even more complex and crucial, especially

for companies heavily involved in data management With the rapid advances in networking and database modeling technology old issues may have to be reinvestigated and new issues come up constantly It is our hope that this year's workshop the sixth in a series of annual events can provide a timely forum for database researchers and practitioners to share their recent experience and results in various aspects of this fast developing field This series of workshops has been organized by the Hong Kong Computer Society and financially supported by many local industrial and business companies This year the Cooperative Research Centre for Open Systems Technology located in the Department of Computer Science City University of Hong Kong has joined the organization team and the list of financial sponsors Re-engineering and Flexi Systems Mr. Rohit Manglik, 2024-03-23 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels **BUSINESS PROCESS RE-ENGINEERING** Dr. Abhijit Chakraborty, *Challenges of Information Technology Management in the 21st Century* Information Resources Management Association. Computer Aided Systems Theory - EUROCAST'99 Franz Pichler, Roberto Moreno-Diaz, Peter Kopacek, 2007-03-02 Computer Aided Systems Theory CAST deals with the task of contributing to the creation and implementation of tools for the support of usual CAD tools for design and simulation by formal mathematical or logical means in modeling Naturally the basis for the construction and implementation of CAST software is provided by the existing current knowledge in modeling and by the experience of practitioners in engineering design Systems Theory as seen from the viewpoint of CAST research and CAST tool development has the role of providing formal frameworks and related theoretical knowledge for model construction and model analysis We purposely do not distinguish sharply between systems theory and CAST and other similar fields of research and tool development such as for example in applied numerical analysis or other computational sciences The here documented EUROCAST conference which took place at the Vienna University of Technology reflects current mainstreams in CAST As in the previous conferences new topics both theoretical and application oriented have been addressed The presented papers show that the field is widespread and that new developments in computer science and in information technology are the driving forces
