proceedings of ICCS 2003 the 11th International Conference on Conceptual Structures

This conference series continues to be the main forum for the presentation and discussion of state of the art research on conceptual structures. The theories, methodologies and techniques presented here have grown considerably in scope in recent years. On the other hand, solid bridges spanning the boundaries between such diverse fields as Conceptual Graphs, Formal Concept Analysis and others are increasingly being built in our community. The theme of this year's conference was Conceptual Structures for Knowledge Creation and Communication. In our increasingly interconnected world, the potential support of information technology for the creation and communication of quality knowledge is almost boundless. However, in reality, many conceptual barriers prevent the use of this potential. The main problem is no longer in the technological infrastructure but in how to navigate, use and manage the wealth of available data resources. Thus, the question is how to create and communicate from data the information and ultimately the knowledge required by an ever more complex and dynamic society. Conceptual structures research focuses on what is behind and between the data glut and the information overload that need to be overcome in answering this question. In this way, our field contributes important ideas on how to actually realize some of the many still ambitious visions. All regular papers were reviewed in a thorough and open process by at least two reviewers and one editor.

The Cambridge Handbook of Situated Cognition Philip Robbins, Murat Aydede, 2008-11-03 Since its inception some fifty years ago, cognitive science has seen a number of sea changes. Perhaps the best known is the development of connectionist models of cognition as an alternative to classical symbol-based approaches. A more recent and increasingly influential trend is that of dynamical systems-based, ecologically oriented models of the mind. Researchers suggest that a full understanding of the mind will require systematic study of the dynamics of interaction between mind, body and world. Some argue that this new orientation calls for a revolutionary new metaphysics of mind, according to which mental states and processes and even persons literally extend into the environment. This book is a guide to this movement in cognitive science. Each chapter tackles either a specific area of empirical research or specific sector of the conceptual foundation underlying this research.

Information Overload Guus Pijpers, 2010-07-02 World-class guidance on using information to achieve better performance. Examining the characteristics of information and the latest findings in cognitive science, this book shows how the mind works, how it can be used to think optimally about your business, and how to improve business performance with better information management practices. Provides the process and tools necessary to identify this information and how to remember it, and how to better use the people around you to obtain the best information. Reveals how to handle all of the hundreds of pieces of information received daily. Provides case studies as well as checklists that show managers how to implement the methodology presented in the book. Innovative and ahead of its time, this book helps you take control of all the information that enters your life, get better informed, and have more time for the important issues you face within your business.
