Modern Techniques in Applied Molecular Spectroscopy Francis M.

Mirabella, 1998-04-06 A complete guide to choosing and using the best analytical technique for the job at hand Today's new generation of spectroscopic instrumentation allows for more accurate and varied measurements than ever before At the same time increasingly powerful user friendly PC hardware and software make running those instruments relative child's play However although they may have solved many of the problems traditionally associated with conducting molecular spectroscopic analyses these refinements tend to obscure inherent technical challenges which if not taken into consideration can seriously undermine a research initiative Modern Techniques in Applied Molecular Spectroscopy gives scientists and technicians the knowledge they need to address those challenges and to make optimal selection and use of contemporary molecular spectroscopic techniques and technologies While editor Francis Mirabella and contributors provide ample background information about how and why individual techniques work they concentrate on practical considerations of crucial concern to researchers working in industry For each technique covered they provide expert guidance on method selection sample preparation troubleshooting data handling and analysis and more Adhering principally to mid IR molecular

spectroscopic techniques they clearly describe the guiding principles behind characteristics of and suitable applications for transmission spectroscopy reflectance spectroscopies photoacoustic spectroscopy infrared and Raman microspectroscopy fiber optic techniques and emission spectroscopy Modern Techniques in Applied Molecular Spectroscopy is an indispensable working resource for analytical scientists and technicians working in an array of industries
