Inference, Method and Decision R.D. Rosenkrantz, 2012-01-21 This book grew out of previously published papers of mine composed over a period of years they have been reworked sometimes beyond recognition so as to form a reasonably coherent whole Part One treats of informative inference I argue Chapter 2 that the traditional principle of induction in its clearest formulation that laws are confirmed by their positive cases is clearly false Other formulations in terms of the uniformity of nature or the resemblance of the future to the past seem to me hopelessly unclear From a Bayesian point of view learning from experience goes by conditionalization Bayes rule The traditional stumbling block for Bayesians has been to find objective probability inputs to conditionalize upon Subjective Bayesians allow any probability inputs that do not violate the usual axioms of probability Many subjectivists grant that this liberality seems prodigal but own themselves unable to think of additional constraints that might plausibly be imposed To be sure if we could agree on the correct probabilistic representation of ignorance or absence of pertinent data then all probabilities obtained by applying Bayes rule to an informationless prior would be objective But familiar contradictions like the Bertrand paradox are thought to vitiate all attempts to objectify ignorance Building on the earlier work of Sir Harold Jeffreys E T Jaynes and the more recent work of G E P Box and G E Tiao I have elected to bite this bullet In Chapter 3 I develop and defend an objectivist Bayesian approach

Statistical Decision Theory James Berger, 2013-04-17 Decision theory is generally taught in one of two very different ways When of opti taught by theoretical statisticians it tends to be presented as a set of mathematical techniques mality principles together with a collection of various statistical procedures When useful in establishing the optimality taught by applied decision theorists it is usually a course in Bayesian analysis showing how this one decision principle can be applied in

various practical situations The original goal I had in writing this book was to find some middle ground I wanted a book which discussed the more theoretical ideas and techniques of decision theory but in a manner that was constantly oriented towards solving statistical problems In particular it seemed crucial to include a discussion of when and why the various decision principles should be used and indeed why decision theory is needed at all This original goal seemed indicated by my philosophical position at the time which can best be described as basically neutral I felt that no one approach to decision theory or statistics was clearly superior to the others and so planned a rather low key and impartial presentation of the competing ideas In the course of writing the book however I turned into a rabid Bayesian There was no single cause for this conversion just a gradual realization that things seemed to ultimately make sense only when looked at from the Bayesian viewpoint

Decision Support Systems for Sustainable Development Gregory E. Kersten, Zbigniew Mikolajuk, Anthony Gar-On Yeh, 2006-03-01 In recent years much work has been done in formulating and clarifying the concept of sustainable development and related theoretical and research issues Now the challenge has shifted to designing and stimulating processes of effective planning and decision making at all levels of human activity in such a way as to achieve local and global sustainable development Information technology can help a great deal in achieving sustainable development by providing well designed and useful tools for decision makers One such tool is the decision support system or DSS This book explores the area of DSS in the context of sustainable development As DSS is a very new technique especially in the developing world this book will serve as a reference text primarily for managers government officials and information professionals in developing countries It covers the concept of sustainable development defines DSS and how it can be used in the planning and management of sustainable development and examines the state of the art in DSS use Other interested readers will include students teachers and analysts in information sciences DSS designers developers and implementors and international development agencies

Algorithms for Decision Making Mykel J. Kochenderfer, Tim A. Wheeler, Kyle H. Wray, 2022-08-16 A broad introduction to algorithms for decision making under uncertainty introducing the underlying mathematical problem formulations and the algorithms for solving them Automated decision making systems or decision support systems used in applications that range from aircraft collision avoidance to breast cancer screening must be designed to account for various sources of uncertainty while carefully balancing multiple objectives This textbook provides a broad introduction to algorithms for decision making under uncertainty covering the underlying mathematical problem formulations and the algorithms for solving them The book first addresses the problem of reasoning about uncertainty and objectives in simple decisions at a single point in time and then turns to sequential decision problems in stochastic environments where the outcomes of our actions are uncertain It goes on to address model uncertainty when we do not start with a known model and must learn how to act through interaction with the environment state uncertainty in which we do not know the current state of the environment due to imperfect perceptual information and decision contexts involving

multiple agents The book focuses primarily on planning and reinforcement learning although some of the techniques presented draw on elements of supervised learning and optimization Algorithms are implemented in the Julia programming language Figures examples and exercises convey the intuition behind the various approaches presented
