Information Sampling and Adaptive Cognition Klaus Fiedler, Peter Juslin, 2006 This book proposes that environmental information samples are biased and cognitive processes are not The Wiley Blackwell Handbook of Judgment and Decision Making, 2 Volume Set Gideon Keren, George Wu, 2016-02-16 A comprehensive up to date examination of the most important theory concepts methodological approaches and applications in the burgeoning field of judgment and decision making JDM Emphasizes the growth of JDM applications with chapters devoted to medical decision making decision making and the law consumer behavior and more Addresses controversial topics from multiple perspectives such as choice from description versus choice from experience and contrasts between empirical methodologies employed in behavioral economics and psychology Brings together a multi disciplinary group of contributors from across the social sciences including psychology economics marketing finance public policy sociology and philosophy 2 Volumes **Foundations of Metacognition** Michael J. Beran, 2012-09-06 Metacognition refers to the awareness an individual has of their own mental processes In the past thirty years metacognition research has become a rapidly growing field of interdisciplinary research within the cognitive sciences This book brings together leading cognitive scientists to consider some of the key questions regarding this phenomenon

The Cambridge Handbook of Consciousness Philip David Zelazo, Morris Moscovitch, Evan Thompson, 2007-05-14 The Cambridge Handbook of Consciousness is the first of its kind in the field and its appearance marks a unique time in the history of intellectual inquiry on the topic After decades during which consciousness was considered beyond the scope of legitimate scientific investigation consciousness re emerged as a popular focus of research towards the end of the last century and it has remained so for nearly 20 years There are now so many different lines of investigation on consciousness that the time has come when the field may finally benefit from a book that pulls them together and by juxtaposing them provides a comprehensive survey of this exciting field An authoritative desk reference which will also be suitable as an advanced textbook **The Handbook of Rationality** Markus Knauff, Wolfgang Spohn, 2021-12-14 The first reference on rationality that integrates accounts from psychology and philosophy covering descriptive and normative theories from both disciplines Both analytic philosophy and cognitive psychology have made dramatic advances in understanding rationality but there has been little interaction between the disciplines This volume offers the first integrated overview of the state of the art in the psychology and philosophy of rationality Written by leading experts from both disciplines The Handbook of Rationality covers the main normative and descriptive theories of rationality how people ought to think how they actually think and why we often deviate from what we can call rational It also offers insights from other fields such as artificial intelligence economics the social sciences and cognitive neuroscience The Handbook proposes a novel classification system for researchers in human rationality and it creates new connections between rationality research in philosophy psychology and other disciplines Following the basic distinction between theoretical and practical rationality the book first considers the

theoretical side including normative and descriptive theories of logical probabilistic causal and defeasible reasoning It then turns to the practical side discussing topics such as decision making bounded rationality game theory deontic and legal reasoning and the relation between rationality and morality Finally it covers topics that arise in both theoretical and practical rationality including visual and spatial thinking scientific rationality how children learn to reason rationally and the connection between intelligence and rationality

Logic and Uncertainty in the Human Mind Shira Elqayam,Igor Douven,Jonathan St B. T. Evans,Nicole Cruz,2020-06-10 David E Over is a leading cognitive scientist and with his firm grounding in philosophical logic he also exerts a powerful influence on the psychology of reasoning He is responsible for not only a large body of empirical work and accompanying theory but for advancing a major shift in thinking about reasoning commonly known as the new paradigm in the psychology of human reasoning Over s signature mix of philosophical logic and experimental psychology has inspired generations of researchers psychologists and philosophers alike over more than a quarter of a century The chapters in this volume written by a leading group of contributors including a number who helped shape the psychology of reasoning as we know it today each take their starting point from the key themes of Over s ground breaking work The essays in this collection explore a wide range of central topics such as rationality bias dual processes and dual systems as well as contemporary psychological and philosophical theories of conditionals It concludes with an engaging new chapter authored by David E Over himself which details and analyses the new paradigm psychology of reasoning This book is therefore important reading for scholars researchers and advanced students in psychology philosophy and the cognitive sciences including those who are not familiar with Over s thought already

Taming Uncertainty Ralph Hertwig,Timothy J. Pleskac,Thorsten Pachur,2019-08-13 An examination of the cognitive tools that the mind uses to grapple with uncertainty in the real world How do humans navigate uncertainty continuously making near effortless decisions and predictions even under conditions of imperfect knowledge high complexity and extreme time pressure Taming Uncertainty argues that the human mind has developed tools to grapple with uncertainty Unlike much previous scholarship in psychology and economics this approach is rooted in what is known about what real minds can do Rather than reducing the human response to uncertainty to an act of juggling probabilities the authors propose that the human cognitive system has specific tools for dealing with different forms of uncertainty They identify three types of tools simple heuristics tools for information search and tools for harnessing the wisdom of others This set of strategies for making predictions inferences and decisions constitute the mind s adaptive toolbox The authors show how these three dimensions of human decision making are integrated and they argue that the toolbox its cognitive foundation and the environment are in

constant flux and subject to developmental change They demonstrate that each cognitive tool can be analyzed through the concept of ecological rationality that is the fit between specific tools and specific environments Chapters deal with such specific instances of decision making as food choice architecture intertemporal choice financial uncertainty pedestrian navigation and adolescent behavior

Informed by Knowledge Kathleen L. Mosier,Ute M. Fischer,2011-01-07 The focus of this book is on how experts adapt to complexity synthesize and interpret information in context and transform or fuse disparate items of information into coherent knowledge The chapters examine these processes across experts e g global leaders individuals in extreme environments managers police officers pilots commanders doctors inventors across contexts e g space and space analogs corporate organizations command and control crisis and crowd management air traffic control the operating room product development and for both individual and team performance Successful information integration is a key factor in the success of diverse endeavors including team attempts to climb Mt Everest crowd control in the Middle East and remote drilling operations This volume is divided into four sections each with a specific focus on an area of expert performance resulting in a text that covers a wide range of useful information These sections present well researched discussions such as the management of complex situations in various fields and decision contexts technological and training approaches to facilitate knowledge management by individual experts and expert teams new or neglected perspectives in expert decision making and the importance of modeling expert performance through techniques and frameworks such as Cognitive Task Analysis computational architectures based on the notion of causal belief mapping such as Convince Me or the data frame model of sensemaking The volume provides essential reading for researchers and practitioners of Naturalistic Decision Making and those who study Expertise Organizational and Cognitive Psychologists and researchers and students in Business and Engineering

Deliberate Ignorance Ralph Hertwig,Christoph Engel,2021-02-02 Psychologists economists historians computer scientists sociologists philosophers and legal scholars explore the conscious choice not to seek information The history of intellectual thought abounds with claims that knowledge is valued and sought yet individuals and groups often choose not to know We call the conscious choice not to seek or use knowledge or information deliberate ignorance When is this a virtue when is it a vice and what can be learned from formally modeling the underlying motives On which normative grounds can it be judged Which institutional interventions can promote or prevent it In this book psychologists economists historians computer scientists sociologists philosophers and legal scholars explore the scope of deliberate ignorance

Bounded Thinking Adam Morton,2012-11-08 Bounded Thinking offers a new account of the virtues of limitation management intellectual virtues of adapting to the fact that we cannot solve many problems that we can easily describe Adam Morton argues that we do give one another guidance on managing our limitations but that this has to be in terms of virtues and not of rules and in terms of success knowledge and accomplishment rather than rationality He establishes a taxonomy of intellectual virtues which includes paradoxical virtues that sound like vices such as the virtue of

ignoring evidence and the virtue of not thinking too hard There are also virtues of not planning ahead in that some forms of such planning require present knowledge of one's future knowledge that is arguably impossible A person's best response to many problems depends not on the most rationally promising solution to solving them but on the most likely route to success given the profile of intellectual virtues that the person has and lacks Morton illustrates his argument with discussions of several paradoxes and conundra He closes the book with a discussion of intelligence and rationality and argues that both have very limited usefulness in the evaluation of who will make progress on which problems

Intuition in Judgment and Decision Making

Henning Plessner, Cornelia Betsch, Tilmann Betsch, 2011-05-20 The central goal of this volume is to bring the learning perspective into the discussion of intuition in judgment and decision making The book gathers recent work on intuitive decision making that goes beyond the current dominant heuristic processing perspective However, that does not mean that the book will strictly oppose this perspective The unique perspective of this book will help to tie together these different conceptualizations of intuition and develop an integrative approach to the psychological understanding of intuition in judgment and decision making Accordingly, some of the chapters reflect prior research from the heuristic processing perspective in the new light of the learning perspective This book provides a representative overview of what we currently know about intuition in judgment and decision making The authors provide latest theoretical developments, integrative frameworks, and state-of-the-art reviews of research in the laboratory and in the field Moreover, some chapters deal with applied topics *Intuition in Judgment and Decision Making* aims not only at the interest of students and researchers of psychology but also at scholars from

Dunning, Joachim Krueger, 2013-05-13 The volume begins with a historical overview of the self in social judgment and outlines the major issues Subsequent chapters all written by leading experts in their respective areas identify and elaborate four major themes regarding the self in social judgment the role of the self as an information source for evaluating others or what has been called social projection the assumption of personal superiority as reflected in the pervasive tendency for people to view their characteristics more favorably than those of others the role of the self as a comparison standard from or toward which other people's behaviors and attributes are assimilated or contrasted the relative weight people place on the individual and collective selves in defining their attributes and comparing them to those of other people

Integrated Models of Cognitive Systems Wayne D. Gray, 2007-04-19 The field of cognitive modeling has progressed beyond modeling cognition in the context of simple laboratory tasks and begun to attack the problem of modeling it in more complex realistic environments such as those studied by researchers in the field of human factors The problems that the cognitive modeling community is tackling focus on modeling certain problems of communication and control that arise when integrating with the external environment factors such as implicit and explicit knowledge emotion cognition and the cognitive system These problems must be solved in order to produce integrated cognitive models of moderately complex tasks Architectures of cognition in these tasks focus on the control of a central system which includes control of the central processor itself initiation of functional processes such as visual search and memory retrieval and harvesting the results of these functional processes Because the control of the central system is conceptually different from the internal control required by individual functional processes a complete architecture of cognition must incorporate two types of theories of control Type 1 theories of the structure functionality and operation of the controller and type 2 theories of the internal control of functional processes including how and what they communicate to the controller This book presents the current state of the art for both types of theories as well as contrasts among current approaches to human performance models It will be an important resource for professional and student researchers in cognitive science cognitive engineering and human factors Contributors Kevin A Gluck Jerry T Ball Michael A Krusmark Richard W Pew Chris R Sims Vladislav D Veksler John R Anderson Ron Sun Nicholas L Cassimatis Randy J Brou Andrew D Egerton Stephanie M Doane Christopher W Myers Hansj rg Neth Jeremy M Wolfe Marc Pomplun Ronald A Rensink Hansj rg Neth Chris R Sims Peter M Todd Lael J Schooler Wai Tat Fu Michael C Mozer Sachiko Kinoshita Michael Shettel Alex Kirlik Vladislav D Veksler Michael J Schoelles Jerome R Busemeyer Eric Dimperio Ryan K Jessup Jonathan Gratch Stacy Marsella Glenn Gunzelmann Kevin A Gluck Scott Price Hans P A Van Dongen David F Dinges
