Conference on Intellectual Capital, knowledge Management and Organisational Learning Eric Tsui, *Handbook of Data Quality* Shazia Sadiq, 2013-08-13 The issue of data quality is as old as data itself However the proliferation of diverse large scale and often publically available data on the Web has increased the risk of poor data quality and misleading data interpretations On the other hand data is now exposed at a much more strategic level e.g through business intelligence systems increasing manifold the stakes involved for individuals corporations as well as government agencies There the lack of knowledge about data accuracy currency or completeness can have erroneous and even catastrophic results With these changes traditional approaches to data management in general and data quality control specifically are challenged There is an evident need to incorporate data quality considerations into the whole data cycle encompassing managerial governance as well as technical aspects Data quality experts from research and industry agree that a unified framework for data quality management should bring together organizational architectural and computational approaches Accordingly Sadiq structured this handbook in four parts Part I is on organizational solutions i.e the development of data quality objectives for the organization and the development of strategies to establish roles processes policies and standards required to manage and ensure data quality Part II on architectural solutions covers the technology landscape required to deploy developed data quality management processes standards and policies Part III on computational solutions presents effective and efficient tools and techniques related to record linkage lineage and provenance data uncertainty and advanced integrity constraints Finally Part IV is devoted to case studies of successful data quality initiatives that highlight the various aspects of data quality in action The individual chapters present both an overview of the respective topic in terms of historical research and or practice and state of the art as well as specific techniques methodologies and frameworks developed by the individual contributors Researchers and students of computer science information systems or business management as well as data professionals and practitioners will benefit most from this handbook by not only focusing on the various sections relevant to their research area or particular practical work but by also studying chapters that they may initially consider not to be directly relevant to them as there they will learn about new perspectives and approaches **Institutionalising the**

largely rural populations and lack of ICT capacity and infrastructure but are also dependent on external agencies for investment and must negotiate with powerful donors who have conflicting agendas E government is widely regarded as transformational increasing efficiency productivity accountability economic growth and citizen involvement But while the governments of SIDS are committed to harnessing ICTs for effective government and economic development they face major challenges in establishing successful e government initiatives due to the problems outlined above coupled with a lack of HR capacities and appropriate strategies and policies Drawing on the experience of the states mentioned above as well as regional quasi governmental bodies nongovernmental organizations NGOs aid agencies and the private sector the book will be of interest to researchers and students in the fields of e government public administration political science communication information science and social media *Strategic Information Management* Robert D.
