Information Processing and Decision Making William Carl Howell, Edwin A. Fleishman, 1982
Organizational Decision Making Zur Shapira, 2002-03-25 Decision making in organizations is often pictured as a coherent and rational process in which alternative interests and perspectives are considered in an orderly manner until the optimal alternative is selected Yet as many members of organizations have discovered from their own experience real decision processes in organizations only seldom fit such a description This book brings together researchers who focus on cognitive aspects of decision processes on the one hand and those who study organizational aspects such as conflict incentives power and ambiguity on the other It draws from the tradition of Herbert Simon who studied organizational decision making's pervasive use of bounded rationality and heuristics of reasoning These multiple perspectives may further our understanding of organizational decision making Organizational Decision Making is particularly well suited for students and faculties of business psychology and public administration

Time Pressure and Stress in Human Judgment and Decision Making A.J. Maule, O. Svenson, 2013-03-09 Some years ago we the editors of this volume found out about each other's deeply rooted interest in the concept of time the usage of time and the effects of shortage of time on human thought and behavior Since then we have fostered the idea of bringing together different perspectives in this area We are now therefore very content that our idea has materialized in the present volume There is both anecdotal and empirical evidence to suggest that time constraints may affect behavior Managers and other professional decision makers frequently identify time pressure as a major constraint on their behavior Isenberg 1984 Chamberlain and Zika 1990 provide empirical support for this view showing that complaints of insufficient time are the most frequently reported everyday minor stressors or hassles for all groups of people except the elderly Similarly studies in occupational settings have identified time pressure as one of the central components of workload Derrick 1988 O'Donnell Eggemeier 1986

Handbook of Economic Psychology W.F. Van Raaij, G.M. van Veldhoven, K.E. Wärneryd, 2013-03-09 The idea to publish a Handbook of Economic Psychology came up as a natural consequence of a discussion concerning appropriate reading material for courses in economic psychology The discussion took place a few years ago in the Department of Economic Psychology at Tilburg University The Netherlands It was noted that there was a surprising lack of collections of pertinent readings to say nothing about the lack of textbooks in the English language So the present editors who had been involved in the discussion decided to start working on a Handbook The situation has changed quite a lot since then There are now a number of books internationally available in the English

language in economic psychology or behavioral economics The interest in this field of study is expanding quite impressively The Journal of Economic Psychology is now 1988 in its ninth volume and many other journals are publishing articles in the field The application of psychological theories and methods to economic problems or the study of economic experiences and behavior is variously referred to as economic psychology or behavioral economics While in principle we do not want to overdo the differences between the two we have a feeling that economic psychology has a slightly stronger flavor of psychology than behavioral economics which in its turn seems to be closer to economics Psychologists tend to feel more at home in economic psychology while economists seem to favor behavioral economics

Systems Biology for Signaling Networks Sangdun Choi, 2010-08-09 System Biology encompasses the knowledge from diverse fields such as Molecular Biology Immunology Genetics Computational Biology Mathematical Biology etc not only to address key questions that are not answerable by individual fields alone but also to help in our understanding of the complexities of biological systems Whole genome expression studies have provided us the means of studying the expression of thousands of genes under a particular condition and this technique had been widely used to find out the role of key macromolecules that are involved in biological signaling pathways However making sense of the underlying complexity is only possible if we interconnect various signaling pathways into human and computer readable network maps These maps can then be used to classify and study individual components involved in a particular phenomenon Apart from transcriptomics several individual gene studies have resulted in adding to our knowledge of key components that are involved in a signaling pathway It therefore becomes imperative to take into account of these studies also while constructing our network maps to highlight the interconnectedness of the entire signaling pathways and the role of that particular individual protein in the pathway This collection of articles will contain a collection of pioneering work done by scientists working in regulatory signaling networks and the use of large scale gene expression and omics data The distinctive features of this book would be Act a single source of information to understand the various components of different signaling network roadmap of biochemical pathways the nature of a molecule of interest in a particular pathway etc Serve as a platform to highlight the key findings in this highly volatile and evolving field and Provide answers to various techniques both related to microarray and cell signaling to the readers
