completely updated second edition of an Artech House classic provides a thorough introduction to the basic principles of
electromagnetic wave propagation of radio frequencies in real world conditions fully updated by including new achievements
in theory and technology It serves as an invaluable daily reference for practitioners in the field and as a complete organized
text on the subject This comprehensive resource covers a wide range of essential topics from the classification of radio waves
electromagnetic wave theory and antennas for RF radio links to the impact of the earth surface on the propagation of ground
waves atmospheric affects in radio wave propagation and radio wave reception The book explores the propagation of the
ground radio waves namely the waves that propagate in vicinity of the earth s surface e g guided by that interface without
involvement of any atmospheric effects Specifics of the high frequency HF radio propagation due to reflections from
ionospheric layers is studied based on commonly used models of the ionospheric vertical profiles Scattering of the radio
waves of UHF and higher frequency bands from the random variations of the tropospheric refraction index from tiny air
turbulences are also considered by using the principles of statistical radio physics Analysis of propagation conditions on real
propagation paths including analysis of the power budget of the VHF UHF link to assure its stability percentage of
availability within observation time frame terrestrial broadcast mobile and satellite RF links are presented The engineering
design of the cellular networks including LTE 4G 5G and upcoming higher generations is explored HF propagation
