Philosophical Logic and Artificial Intelligence Richmond H. Thomason, 2012-12-06 cians concerned with using logical tools in philosophy have been keenly aware of the limitations that arise from the original concentration of symbolic logic on the idiom of mathematics and many of them have worked to create extensions of the received logical theories that would make them more generally applicable in philosophy Carnap's Testability and Meaning published in 1936 and 1937 was a good early example of this sort of research motivated by the inadequacy of first order formalizations of dis This sugar cube is soluble in water positional sentences like And in fact there is a continuous history of work on this topic extending from Carnap's paper to Shoham's contribution to the present volume Much of the work in philosophical logic and much of what has appeared in The Journal of Philosophical Logic was motivated by similar considerations work in modal logic including tense deontic and epistemic logic intensional logics non declaratives presuppositions and many other topics In this sort of research since the main point is to devise new formalisms the technical development tends to be rather shallow in comparison with mathematical logic though it is seldom absent theorems need to be proved in order to justify the formalisms and sometimes these are nontrivial On the other hand much effort has to go into motivating a logical innovation **Logics in Artificial Intelligence** Jose Julio Alferes, Luis Moniz Pereira, Eva Orłowska, 2014-01-15 **Logics in AI** David Pearce, Gerd Wagner, 1992-08-19 This volume contains the proceedings of JELIA 92 les Journées Européennes sur la Logique en Intelligence Artificielle or the Third European Workshop on Logics in Artificial Intelligence The volume contains 2 invited addresses and 21 selected papers covering such topics as Logical foundations of logic programming and knowledge based systems Automated theorem proving Partial and dynamic logics Systems of nonmonotonic reasoning Temporal and epistemic logics Belief revision One invited paper by D Vakarelov is on arrow logics i.e modal logics for representing graph information The other by L M Pereira J J Alferes and J N Aparício is on default theory for well founded semantics with explicit negation

Artificial Intelligence Jack Minker, 2012-12-06 The use of mathematical logic as a formalism for artificial intelligence was recognized by John McCarthy in 1959 in his paper on Programs with Common Sense In a series of papers in the 1960 s he expanded upon these ideas and continues to do so to this date It is now 41 years since the idea of using a formal mechanism for AI arose It is therefore appropriate to consider some of the research applications and implementations that have resulted from this idea In early 1995 John McCarthy suggested to me that we have a workshop on Logic Based Artificial Intelligence LBAI In June 1999 the Workshop on Logic Based Artificial Intelligence was held as a consequence of McCarthy s suggestion The workshop came about with the support of Ephraim Glinert of the National Science Foundation IIS 9S2013S the American Association for Artificial Intelligence who provided support for graduate students to attend and Joseph JaJa Director of the University of Maryland Institute for Advanced Computer Studies who provided both manpower and financial support and the Department of Computer Science We are grateful for their support This book consists of refereed papers based on presentations made at the Workshop Not all of the Workshop participants were able to contribute papers for the book The common theme of papers at the workshop and in this book is the use of logic as a formalism to solve problems in AI
