Multimedia Databases And Image Communication - Proceedings Of The Workshop On Mdic 2004 Andrea F Abate,Michele Nappi,Monica

Sebillo,2005-01-19 There is a strong need for advances in the fields of image indexing and retrieval and visual query languages for multimedia databases Image technology is facing both classical and novel problems for the organization and filtering of increasingly large amounts of pictorial data Novel kinds of problems such as indexing and high level content base accessing to image databases human interaction with multimedia systems approaches to multimedial data biometrics data mining computer graphics and augmented reality have grown into real life issues The papers in this proceedings volume relate to the subject matter of multimedia databases and image communication They offer different approaches which help to keep the field of research lively and interesting **Image** Sergio Vitulano,2003 This volume emphasizes the primary role played by images in computer science In the last two decades images have replaced written texts the enormous possibilities of the image language have overcome written language in an ever more restricted ambit An image is better than one thousand words so it was straightforward to apply visual language in the field of computer science Nowadays everything that appears on a computer screen is an image regardless of whether it is a word or a picture Is it possible to realize an e learning program without working in terms of images The answer is undoubtedly no even if several problems arise in this context the qualitative and quantitative content of the image we need to use for a specific task the psychological effect on the user including the level of attention and the correct perception of the image significance Most of these problems form the basis of image understanding techniques Widespread use of images requires organization of the information in the databank or database whose dimensions are sometimes so wide as to be too complex to manage therefore information retrieval

evaluation It makes the intuitive understanding of these easier by using examples and diagrams and provides a wealth of references for those readers who wish to know more

Software Engineering Of Fault Tolerant Systems Patrizio Pelliccione, Henry Muccini, Alexander Romanovsky, Nicolas Guelfi, 2007-08-13 In architecting dependable systems what is required to improve the overall system robustness is fault tolerance Many methods have been proposed to this end the solutions are usually considered late during the design and implementation phases of the software life cycle e g Java and Windows NT exception handling thus reducing the effectiveness error and fault handling Since the system design typically models only normal behaviour of the system while ignoring exceptional ones the implementation of the system is unable to handle abnormal events Consequently the system may fail in unexpected ways due to faults It has been argued that fault tolerance management during the entire life cycle improves the overall system robustness and that different classes of threats need to be identified for and dealt with at each distinct phase of software

development depending on the abstraction level of the software system being modelled This book builds on this trend and investigates how fault tolerance mechanisms can be applied when engineering a software system In particular it identifies the new problems arising in this area introduces the new models to be applied at different abstraction levels defines methodologies for model driven engineering of such systems and outlines the new technologies and validation and verification environments supporting this

Acquisition of Software Engineering Knowledge George S. Cowan, Robert G. Reynolds, 2003 This is the first book that attempts to provide a framework in which to embed an automatic programming system based on evolutionary learning genetic programming into a traditional software engineering environment As such it looks at how traditional software engineering knowledge can be integrated with an evolutionary programming process in a symbiotic way
