Developments IMechE (Institution of Mechanical Engineers), 2001-02-08 Hydropower development design and implementation cases Hydropower Developments is a collection of papers curated from the November 2000 conference hosted by the Institution of Mechanical Engineers Showcasing the latest advances from international companies these papers highlight specific cases that illustrate current challenges and solutions in the field Details on the refurbishment of Rannoch Power Station in Scotland and the new hydroelectric unit at Kenya's Gitaru Underground Power Station provide up to date guidance on design considerations and technological improvements shedding new light on ongoing work and suggesting directions for future research *Planning and Installing Micro-Hydro Systems* Chris Elliott, 2014-04-16 An essential addition to the Earthscan Planning Installing series Planning and Installing Micro Hydro Systems provides vital diagrams pictures and tables detailing the planning and installing of a micro hydro system including information on the maintenance and economics once an installation is running The book covers subjects such as measuring head and flow ecological impacts scheme layouts practical advice calculations and turbine choice Archimedes screws are also covered in detail as well as the main conventional choices relevant to small sites Micro hydro refers to hydropower systems with a power rating of 100kW or less A 100kW system will produce 100 standard units of electricity in one hour These systems have been popular in some sparsely populated or mountainous countries for a number of years but now new technology less stringent regulation of grid connected generators and standardised turbine designs are encouraging more widespread interest in micro hydro in the developed world The renewable energy sector is growing at a remarkable rate and whilst much attention has so far focused on solar and wind technologies Europe and elsewhere have great potential for generating power from small scale hydroelectric installations This book is aimed at site owners designers and consultants who are looking to develop schemes in the micro hydro scale 5 to 100kW although the concepts are applicable to smaller and larger schemes *Dams and Development* United Nations Environment Programme. Division of Environmental Policy Implementation. Dams and Development Project, 2007 This is a compilation of relevant practices of dealing with environmental and social issues during

the planning design and management of dams The Compendium covers 9 topics selected by the multistakeholder Dams and Development Forum It discusses the state of the art regarding dealing with the topics around the world It shows how they are captured by regulatory frameworks and provides a number of examples illustrating how they have been implemented on the ground Publisher s description Hydropower in the New Millennium B. Honningsvag,G.H. Midttomme,K. Repp,K. Vaskinn,T. Westernen,2020-12-18 The power sector has undergone a liberalization process both in industrialized and developing countries involving market regimes as well as ownership structure These processes have called for new and innovative concepts affecting both the operation of existing hydropower plants and transmission facilities as well as the development and implementation of new projects At the same time a sharper focus is being placed on environmental considerations In this context it is important to emphasize the obvious benefits of hydropower as a clean renewable and sustainable energy source It is however also relevant to focus on the impact on the local environment during the planning and operation of hydropower plants New knowledge and methods have been developed that make it possible to mitigate the local undesirable effects of such projects Development and operation of modern power systems require sophisticated technology Continuous research and development in this field is therefore crucial to maintaining hydropower as a competitive and environmentally well accepted form of power generation Water and Development The World Bank,2010-06-30 Development patterns increasing population pressure and the demand for better livelihoods in many parts of the globe all contribute to a steadily deepening global water crisis Development redirects consumes and pollutes water It also causes changes in the state of natural water reservoirs directly by draining aquifers and indirectly by melting glaciers and the polar ice caps Maintaining a sustainable relationship between water and development requires that current needs be balanced against the needs of future generations The development community has transformed and broadened its approach to water since the 1980s As stresses on the quality and availability of water have increased donors have begun to move toward more comprehensive approaches that seek to integrate water into development in other sectors This evaluation examines the full scope of the World Bank s lending and grant support for water activities More than 30 background papers prepared for the evaluation have analyzed Bank lending by thematic area and by activity type IDA and IBRD the Bank have supported countries in many water related sectors The evaluation by definition is retrospective but it identifies changes that will be necessary going forward including those related to strengthening institutions and increasing financial sustainability Lessons and results from nearly 2 000 loans and credits and work with 142 countries are identified **Reconnaissance Report for Hydropower: Lock and dam 2, Mississippi River, Hastings, Minnesota** United States.
