## **Logic And Time An Essay On Husserls Theory Of Meaning:**

*Logic and Time* K. Michalski, 2001-11-30 The subject of this study is Husserl's theory of meaning as it appears in his writings from the Logical Investigations to the Crisis of the European Sciences. The first chapter focuses on Husserl's critique of psychologism and the theory of meaning that stems from it. The second chapter takes its departure from the question of Husserl's attitude towards the Cartesian tradition then presents the transcendental noematic theory of meaning represented by The Idea of Phenomenology Ideas and Cartesian Meditations. The third chapter deals with Husserl's interpretation of time consciousness against the background of the development of the problem of time in modern philosophy. Husserl often changed his views regarding the question of meaning. I have tried to understand the reasons for these changes. To do this I have occasionally disturbed the chronological order of his arguments in favour of a consideration of their logical development and coherence. Throughout this study but especially in the digression on consciousness and speech and the Postscript I have also attempted to bring to the fore a tension in Husserl's thought between two interpretative strategies: the first I call Cartesian the other non Cartesian or hermeneutical.

*Logic and Time* Krzysztof Michalski, 1997 The subject of this study is Husserl's theory of meaning from his critique of psychologism and the theory of meaning that stems from it through the transcendental theory of meaning of The Idea of Phenomenology Ideas I and Cartesian Meditations to the theory of time consciousness and its consequences for Husserl's understanding of meaning. Throughout the study the tension in Husserl's thought between two interpretative strategies: the Cartesian and the Hermeneutical is brought to the fore.

**Husserl and Heidegger on Human Experience** Pierre Keller, 1999-11-04 In this 1999 book Pierre Keller examines the distinctive contributions and the respective limitations of Husserl's and Heidegger's approach to fundamental elements of human experience. He shows how their accounts of time, meaning and personal identity are embedded in important alternative conceptions of how experience may be significant for us and discusses both how these

conceptions are related to each other and how they fit into a wider philosophical context His sophisticated and accessible account of the phenomenological philosophy of Husserl and the existential phenomenology of Heidegger will be of wide interest to students and specialists in these areas while analytic philosophers of mind will be interested by the detailed parallels which he draws with a number of concerns of the analytic philosophical tradition *Hermeneutics and Science* Márta Fehér, O. Kiss, L. Ropolyi, 2013-04-17 Hermeneutics was elaborated as a specific art of understanding in humanities The discovered paradigmatic historical characteristics of scientific knowledge and the role of rhetoric interpretation and contextuality enabled us to use similar arguments in natural sciences too In this way a new research field the hermeneutics of science emerged based upon the works of Husserl Merleau Ponty Heidegger and Gadamer A dialogue between philosophers and scientists begins in this volume on hermeneutic approaches to physics biology ethology mathematics and cognitive science Scientific principles methodologies discourse language and metaphors are analyzed as well as the role of the lay public and the legitimation of science Different hermeneutical phenomenological approaches to perception experiments methods discovery and justification and the genesis of science are presented Hermeneutics shed a new light on the incommensurability of paradigms the possibility of translation and the historical understanding of science *Japanese Studies in the Philosophy of Science* F.G. Nagasaka, Robert S. Cohen, 1998-05-31 In this book 12 contemporary Japanese philosophers of science are presented using a generous sampling of their works as scientists and philosophers who have investigated the foundations of natural science the philosophy of mind and especially of perception the logic of inference and of time causality and evolution *Heinrich Hertz: Classical Physicist, Modern Philosopher* D. Baird, R.I. Hughes, A. Nordmann, 2013-03-14 The sub title of this symposium is accurate and in a curious way promises more than it states Classical Physicist Modern Philosopher Heinrich Hertz as the consummate experimentalist of 19th century technique and as brilliant clarifying critic of physical theory of his time achieved one of the fulfillments but at the same time opened one of the transition points of classical physics Thus in his popular lecture On the Relations Between Light and Electricity at Heidelberg in the Fall of 1889 Hertz identified the ether as henceforth the most fundamental problem of physics as the conceptual mystery but also the key to understanding mass electricity and gravity Of Hertz's demonstration of electric waves Helmholtz told the Physical Society of Berlin Gentlemen I have to communicate to you today the most important physical discovery of the century Hertz philosophizing in his direct lucid pithy style once wrote We have to imagine Perhaps this is metaphysics on the horizon In the early pages of his Principles of Mechanics we read A doubt which makes an impression on our mind cannot be removed by calling it metaphysical every thoughtful mind as such has needs which scientific men are accustomed to denote as metaphysical PM23 And at another place concerning the terms force and electricity and the alleged mystery of their natures Hertz wrote We have an obscure feeling of this and want to have things cleared up **Phenomenalism, Phenomenology, and the Question of Time** Adam Berg, 2015-12-15 Phenomenalism Phenomenology and the Question of

Time A Comparative Study of the Theories of Mach Husserl and Boltzmann analyzes two interconnected themes the split between phenomenalism and phenomenology and the question of time in relation to physical processes and irreversibility in physics The first theme is the overlooked connections between the modern phenomenology of Edmund Husserl and his mentor Franz Brentano and phenomenalism as associated with Ernst Mach The book s historical conceptual perspective draws attention to the ways in which Husserl s twentieth century advance of phenomenological method was conceived in relation to Mach s late nineteenth century and early twentieth century work both in science and philosophy At first glance Mach s phenomenalism appears to be in stark contrast to Husserl s phenomenology but on closer inspection it influenced and informed its inception By analyzing Husserl s revolutionary method of phenomenology in connection to Mach s earlier conceptions the book elucidates the rise of modern physics especially through the work of Ludwig Boltzmann as an important context to both Mach s philosophical work and Husserl s early overtures into phenomenology and his later critique of the crisis of European sciences The discursive affinities and differences between phenomenalism and phenomenology are examined in terms of a more contemporary debate over naturalizing phenomenology either as a method continuous with science or reduced to it This immanent tension is examined and evaluated specifically through the second thematic axis of the book which deals with the question of time and irreversibility Time in physics conforms to an explanatory scheme that relegates the issues of directionality and symmetry of time to concepts that are radically different from any phenomenological attempts to explain temporality in terms of intuition and consciousness It is precisely through the notion of irreversibility that both perspectives scientific and phenomenological explicate time s arrow not as a mere manifestation of sensory asymmetry as Mach would have it but rather through indirect descriptions of time and temporal objects The issue of time s arrow irreversibility and Boltzmann s physical hypotheses regarding the nature of time are introduced and comparatively assessed with Husserl s work on phenomenology and the role of temporality to consciousness

Nietzsche, Theories of Knowledge, and Critical Theory B.E. Babich, 2013-03-09 Nietzsche Theories of Knowledge and Critical Theory the first volume of a two volume book collection on Nietzsche and the Sciences ranges from reviews of Nietzsche and the wide variety of epistemic traditions not only pre Socratic but Cartesian Leibnizian Kantian and post Kantian through essays on Nietzsche s critique of knowledge via his critique of grammar and modern culture and culminates in an extended section on the dynamic of Nietzsche s critical philosophy seen from the perspective of Habermas and critical theory This volume features a first time English translation of Habermas s afterword to his own German language collection of Nietzsche s Epistemological Writings

Commentary on Husserl's "Ideas I" Andrea Staiti, 2015-09-14 Husserl s Ideas for a Pure Phenomenology and Phenomenological Philosophy 1913 is one of the key texts of twentieth century philosophy It is the first of Husserl s published works to present his distinctive version of transcendental philosophy and to put forward the ambitious claim that phenomenology is the fundamental science of philosophy In Ideas Husserl introduces for the first time the

conceptual arsenal of his mature phenomenology the principle of all principles the phenomenological epoch and reduction pure consciousness and the noema All these difficult notions have been influential and controversial in subsequent philosophy both analytic and Continental In this commentary thirteen leading scholars of Husserlian phenomenology set out to clarify and defend Husserl's views connecting them to the vast corpus of his published and unpublished writings and discussing the main available interpretations in the existing scholarship The result is a detailed and comprehensive account of the most original form of transcendental philosophy since Kant's Critique of Pure Reason

**History of Science, History of Text** Karine Chemla, 2005-08-01 two main interacting ways They constitute that with which exploration into problems or questions is carried out But they also constitute that which is exchanged between scholars or in other terms that which is shaped by one or by some for use by others In these various dimensions texts obviously depend on the means and technologies available for producing reproducing using and organizing writings In this regard the contribution of a history of text is essential in helping us approach the various historical contexts from which our sources originate However there is more to it While shaping texts as texts the practitioners of the sciences may create new textual resources that intimately relate to the research carried on One may think for instance of the process of introduction of formulas in mathematical texts This aspect opens up a whole range of extremely interesting questions to which we will return at a later point But practitioners of the sciences also rely on texts produced by themselves or others which they bring into play in various ways More generally they make use of textual resources of every kind that is available to them reshaping them restricting or enlarging them Among these one can think of ways of naming syntax of statements or grammatical analysis literary techniques modes of shaping texts or parts of text genres of text and so on In this sense the practitioners depend on and draw on the textual cultures available to the social and professional groups to which they belong

*Analysis and Synthesis in Mathematics* Michael Otte, Marco Panza, 1997 The book discusses the main interpretations of the classical distinction between analysis and synthesis with respect to mathematics In the first part this is discussed from a historical point of view by considering different examples from the history of mathematics In the second part the question is considered from a philosophical point of view and some new interpretations are proposed Finally in the third part one of the editors discusses some common aspects of the different interpretations

Potentiality, Entanglement and Passion-at-a-Distance Robert S. Cohen, M. Horne, J.J. Stachel, 1997-06-30 Potentiality Entanglement and Passion at a Distance is a book for theoretical physicists and philosophers of modern physics It treats a puzzling and provocative aspect of recent quantum physics the apparent interaction of certain physical events that cannot share any causal connection These are said to be entangled in some way but an explanation remains elusive Abner Shimony to whom the book is dedicated and others suggest the need to revive the category of what may be seen as a metaphysical potentiality Abner has described these events without actions to link them as passion at a distance not active but passive The discussions gathered here are written by a truly remarkable cast of scientists and philosophers and shed new

light on the most profound puzzles of our times      The Logic of Intentional Objects Jacek Pasniczek, 1997-12-31

Intentionality is one of the most frequently discussed topics in contemporary phenomenology and analytic philosophy This book investigates intentionality from the point of view of intentional objects According to the classical approach to this concept whatever can be consciously experienced is regarded as an intentional object Thus not only ordinary existing individuals but also various kinds of non existents and non individuals are considered as intentional including such bizarre entities as quantifier objects some dog every dog Alexius Meinong an Austrian philosopher is particularly well known as the inventor of an abundant ontology of objects among which even incomplete and impossible ones like the round square find their place Drawing inspirations from Meinong s ideas the author develops a simple logic of intentional objects M logic M logic closely resembles classical first order logic and as opposed to the formally complicated contemporary theories of non existent objects it is much more friendly in apprehending and applications However despite this resemblance the ontological content of M logic far exceeds that of classical logic In this book formal investigations are intertwined with philosophical analyses On the one hand M logic is used as a tool for investigating formal features of intentional objects On the other hand the study of intentionality phenomena suggests further ways of extending and modifying M logic Audience The book is addressed to logicians cognitive scientists philosophers of language and metaphysics with either a phenomenological or an analytic background      *Bohmian Mechanics and Quantum Theory: An Appraisal* J.T. Cushing, Arthur Fine, S.

Goldstein, 2013-04-17 We are often told that quantum phenomena demand radical revisions of our scientific world view and that no physical theory describing well defined objects such as particles described by their positions evolving in a well defined way let alone deterministically can account for such phenomena The great majority of physicists continue to subscribe to this view despite the fact that just such a deterministic theory accounting for all of the phenomena of nonrelativistic quantum mechanics was proposed by David Bohm more than four decades ago and has arguably been around almost since the inception of quantum mechanics itself Our purpose in asking colleagues to write the essays for this volume has not been to produce a Festschrift in honor of David Bohm worthy an undertaking as that would have been or to gather together a collection of papers simply stating uncritically Bohm s views on quantum mechanics The central theme around which the essays in this volume are arranged is David Bohm s version of quantum mechanics It has by now become fairly standard practice to refer to his theory as Bohmian mechanics and to the larger conceptual framework within which this is located as the causal quantum theory program While it is true that one can have reservations about the appropriateness of these specific labels both do elicit distinctive images characteristic of the key concepts of these approaches and such terminology does serve effectively to contrast this class of theories with more standard formulations of quantum theory

Plant Breeding and Agrarian Research in Kaiser-Wilhelm-Institutes 1933-1945 Susanne Heim, 2008-03-27 A history of the agricultural sciences in Nazi Germany is presented in this book The book analyzes scientific practice under the Nazi regime

Nazi agricultural policy and autarkic strategies and the expansion policy in Eastern Europe It offers new insights into the Auschwitz concentration camp and new perspectives on the cooperation between German elite scientists and the Nazi regime The book goes on to dismiss the assumption that Arian physics were typical for Nazi Germany **Nietzsche, Theories of Knowledge, and Critical Theory** Babette Babich, Robert S. Cohen, 1999-08-31 Nietzsche Theories of Knowledge and Critical Theory the first volume of a two volume book collection on Nietzsche and the Sciences ranges from reviews of Nietzsche and the wide variety of epistemic traditions not only pre Socratic but Cartesian Leibnizian Kantian and post Kantian through essays on Nietzsche s critique of knowledge via his critique of grammar and modern culture and culminates in an extended section on the dynamic of Nietzsche s critical philosophy seen from the perspective of Habermas and critical theory This volume features a first time English translation of Habermas s afterword to his own German language collection of Nietzsche s Epistemological Writings *Cosmological and Psychological Time* Yuval Dolev, Michael Roubach, 2015-12-16 This book examines the many faces of philosophy of time including the metaphysical aspects natural science issues and the consciousness of time It brings together the different methodologies of investigating the philosophy of time It does so to counter the growing fragmentation of the field with regard to discussions and the existing cleavage between analytic and continental traditions in philosophy The book s multidirectional approach to the notion of time contributes to a better understanding of time s metaphysical physical and phenomenological aspects It helps clarify the presuppositions underpinning the analytic and continental traditions in the philosophy of time and offers ways in which the differences between them can be bridged *Ideas toward a Phenomenology of Interruptions* Cameron Bassiri, 2018-05-16 This text is the first book length analysis of the problem of the relations between time sleep and the body in Husserl s phenomenology Ideas toward a Phenomenology of Interruptions reconfigures the unity of the life of subjectivity in light of the phenomenon of dreamless sleep supplements Husserl s analyses of subjectivity through integrating interruptions into the life of consciousness and establishes a new phenomenological concept of subjectivity that is a fractured subject In analyzing the phenomenon of dreamless sleep the author develops a new theory of the body namely the sleeping body and explains the importance of the lived body in the experience and constitution of time The author analyzes the moments of falling asleep and waking up as well as the period of dreamless sleep and shows that a more complete phenomenological concept of subjectivity requires attention to the interweaving of continuity and discontinuity This project therefore aims to provide a critical counterpart to Husserl s analyses by developing his transcendental phenomenology into a phenomenology of interruptions Through this account of dreamless sleep this text shows furthermore that subjectivity ceases to perceive and experience the flow of time through retention protention and the primal impression and that the time that is not lived through during this period is lost time Moreover it explores the methodological consequences of interruptions for phenomenology and shows that phenomenology reaches its limits in the phenomena of dreamless sleep because it is

incapable of fully accessing or accounting for them through the phenomenological reduction
