Logic, Induction, and Ontology Pranab Kumar Sen,1982      **Foundations of Logic and Language** Pranab Kumar Sen,1990      Logic Identity and Consistency Pranab Kumar Sen,1998      **Learning Expressive Ontologies** J. Völker,IOS Press,2009-06-25 This publication advances the state of the art in ontology learning by presenting a set of novel approaches to the semi automatic acquisition refinement and evaluation of logically complex axiomatizations It has been motivated by the fact that the realization of the semantic web envisioned by Tim Berners Lee is still hampered by the lack of ontological resources while at the same time more and more applications of semantic technologies emerge from fast growing areas such as e business or life sciences Such knowledge intensive applications requiring large scale reasoning over complex domains of interest even more than the semantic web depend on the availability of expressive high quality axiomatizations This knowledge acquisition bottleneck could be overcome by approaches to the automatic or semi automatic construction of ontologies Hence a huge number of ontology learning tools and frameworks have been developed in recent years all of them aiming for the automatic or semi automatic generation of ontologies from various kinds of data However both the quality and the expressivity of ontologies that can be acquired by the current state of the art in ontology learning so far have failed to meet the expectations of people who argue in favor of powerful knowledge intensive applications based on logical inference This work therefore takes a first yet important step towards the semi automatic generation and maintenance of expressive ontologies      **The Oxford Handbook of Skepticism** John Greco,2011-10-01 In the history of philosophical thought few themes loom as large as skepticism Skepticism has been the most visible and important part of debates about knowledge Skepticism at its most basic questions our cognitive achievements challenges our ability to obtain reliable knowledge casting doubt on our attempts to seek and understand the truth about everything from ethics to other minds religious belief and even the underlying structure of matter and reality Since Descartes the defense of knowledge against skepticism has been one of the primary tasks not just of epistemology but philosophy itself The Oxford Handbook of Skepticism features twenty six newly commissioned chapters by top figures in the field Part One contains articles explaining important kinds of skeptical reasoning Part Two focuses on responses to skeptical arguments Part Three concentrates on important contemporary issues revolving around skepticism As the first volume of its kind the articles make significant contributions to the debate on skepticism      Introduction to Dialectical Logic Henri Wald,1975-01-01      **Inductive Logic Programming** Stephen Muggleton,Ramon Otero,Alireza Tamaddoni-Nezhad,2007-09-20 This book constitutes the thoroughly refereed post proceedings of the 16th International Conference on Inductive Logic Programming ILP 2006 held in Santiago de Compostela Spain in August 2006 The papers address all current topics in inductive logic programming ranging from theoretical and methodological issues to advanced applications      *Universals, Concepts and Qualities* P.F. **Reference and Truth** Pranab Kumar Sen,1991      **The Routledge Handbook of Logical Empiricism** Thomas

Uebel, Christoph Limbeck-Lilienau,2021-12-27 Logical empiricism is a philosophical movement that flourished in the 1920s and 30s in Central Europe and in the 1940s and 50s in the United States With its stated ambition to comprehend the revolutionary advances in the empirical and formal sciences of their day and to confront anti modernist challenges to scientific reason itself logical empiricism was never uncontroversial Uniting key thinkers who often disagreed with one another but shared the aim to conceive of philosophy as part of the scientific enterprise it left a rich and varied legacy that has only begun to be explored relatively recently The Routledge Handbook of Logical Empiricism is an outstanding reference source to this challenging subject area and the first collection of its kind Comprising 41 chapters written by an international and interdisciplinary team of contributors the Handbook is organized into four clear parts The Cultural Scientific and Philosophical Context and the Development of Logical Empiricism Characteristic Theses of and Specific Issues in Logical Empiricism Relations to Philosophical Contemporaries Leading Post Positivist Criticisms and Legacy Essential reading for students and researchers in the history of twentieth century philosophy especially the history of analytical philosophy and the history of philosophy of science the Handbook will also be of interest to those working in related areas of philosophy influenced by this important movement including metaphysics and epistemology philosophy of mind and philosophy of language      *Intelligent Information Processing and Web Mining* Mieczyslaw A. Klopotek, Slawomir T. Wierzchon, Krzysztof Trojanowski,2013-06-05 This volume contains articles accepted for presentation during The Intelligent Information Processing and Web Mining Conference IIS IIPWM 03 which was held in Zakopane Poland on June 2 5 2003 This conference extends a series of 12 successful symposia on Intelligent Information Systems organized by the Institute of Computer Science of Polish Academy of Sciences devoted to new trends in broadly understood Artificial Intelligence The idea of organizing such meetings dates back to 1992 Our main intention guided the first rather small audience workshop in the series was to resume the results gained in Polish scientific centers as well as contrast them with the research performed by Polish scientists working at the universities in Europe and USA and their foreign collaborators This idea proved to be attractive enough that we decided to continue such meetings As the years went by the workshops has transformed into regular symposia devoted to such fields like Machine Learning Knowledge Discovery Natural Language Processing Knowledge Based Systems and Reasoning and Soft Computing i e Fuzzy and Rough Sets Bayesian Networks Neural Networks and Evolutionary Algorithms At present about 50 papers prepared by researches from Poland and other countries are usually presented This year conference is an attempt to draw a much broader international audience on the one hand and to devote much more attention to the newest developments in the area of Artificial Intelligence Therefore special calls for contributions on artificial immune systems and search engines      **PRICAI 2012: Trends in Artificial Intelligence** Patricia Anthony, Mitsuru Ishizuka, Dickson Lukose,2012-08-27 This volume constitutes the refereed proceedings of the 12th Pacific Rim Conference on

Artificial Intelligence PRICAI 2012 held in Kuching Malaysia in September 2012 The 60 revised full papers presented together with 2 invited papers 22 short papers and 11 poster papers in this volume were carefully reviewed and selected from 240 submissions The topics roughly include AI foundations applications of AI cognition and intelligent interactions computer aided education constraint and search creativity support decision theory evolutionary computation game playing information retrieval and extraction knowledge mining and acquisition knowledge representation and logic linked open data and semantic web machine learning and data mining multimedia and AI natural language processing robotics social intelligence vision and perception web and text mining web and knowledge based system *Meinongian Logic* Dale Jacquette, 2011-07-11 No detailed description available for Meinongian Logic **Logic in Reality** JOSEPH BRENNER, 2008-05-20 This book is both difficult and rewarding affording a new perspective on logic and reality basically seen in terms of change and stability being and becoming Most importantly it exemplifies a mode of doing philosophy of science that seems a welcome departure from the traditional focus on purely analytic arguments The author approaches ontology metaphysics and logic as having offered a number of ways of constructing the description of reality and aims at deepening their relationships in a new way Going beyond the mere abstract and formal aspects of logical analysis he offers a new architecture of logic that sees it as applied not only to the reasoning processes belonging to the first disciplinary group ontology but also directly concerned with entities events and phenomena studied by the second one metaphysics It is the task of the book to elaborate such a constructive logic both by offering a local view of the structure of the reality in general and by proffering a wealth of models able to encompass its implications for science In turning from the merely formal to the constructive account of logic Brenner overcomes the limitation of logic to linguistic concepts so that it can be not only a logic of reality but also in that reality which is constitutively characterized by a number of fundamental dualities observer and observed self and not self internal and external etc
