**An Introduction to Logic** Leonard James Russell, 2015-06-17 Excerpt from *An Introduction to Logic From the Standpoint of Education* This book is designed for those whose concern is with Education It describes the main aspects of the thinking process with the view of giving the teacher a clear idea of the fundamental things to aim at in getting the child to think Certain features perhaps call for a word of explanation I have endeavoured to begin at the standpoint of the person who is ignorant of Logic and to familiarise him with the thinking process before proceeding to analyse it In so doing I have had in view the method of teaching by which the student is led to construct his own science by his own efforts in discussion with the teacher It follows that the exercises form an integral part of the text They deal as far as possible with problems which arise in school work They are intended of course to test the student's knowledge but their main purpose is to suggest topics for discussion between the teacher and his pupils Hence they contain matter which would usually have been treated in the text But in my opinion the text itself represents results to be gained by the student in discussion rather than points to be put to him in monologic exposition About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

**Critical Thinking and Education** John E. McPeck, 2016-09-13 The skills of critical thinking occupy a contentious place in debates on education It is of course widely recognised that education must consist of more than an unreasoning accumulation of facts and skills and that modern society demands a highly developed critical awareness to cope with its ever increasing complexities Yet the very term critical thinking threatens to become a vague and unexamined slogan displayed more in party tricks than in useful knowledge In this book first published in 1981 Professor McPeck offers a critique of the major ideas and important work in the field including those of Ennis and de Bono while at the same time presenting his own rigorous ideas on the proper place in critical thinking in the philosophy of education The book aims to establish a sound basis on which the role of critical thinking in schools can be evaluated and the author makes a strong case for the contribution it can make to resolving current dilemmas of the curriculum
