DDF Vol. 3: Diffusion Data: A Continuous Compilation of New Reference Data Trans Tech Publications, Limited, 1969-01-01 on Diffusion Processes in Inorganic Solids and their Melts DDF Vol. 7: Diffusion Data: A Continuous Compilation of New Reference Data Trans Tech Publications, Limited, 1973-01-01 on Diffusion Processes in Inorganic Solids and their Melts DDF Vol. 4: Diffusion Data: A Continuous Compilation of New Reference Data Trans Tech Publications, Limited, 1970-01-01 on Diffusion Processes in Inorganic Solids and their Melts **Halides Diffusion-Data Compilation** David Fisher, 2000-05-16 Halides continue to be an increasingly important industrial engineering resource as electrolytes and in heat treatment baths on the one hand and as the basis of exotic devices in the fields of optics electronics etc on the other At both of these extremes the gross or detailed movements of ions respectively are important factors There may also be an important geological need for a knowledge of halide diffusion data in an era when the migration or not of various waste materials including nuclear through natural seams of halide based minerals is of great concern **Diffusion and Defect Data**, 2000 **Bibliography of Mass Spectroscopy Literature for 1970**, 1972 **Advances in Corrosion Science and Technology** Mars G. Fontana, Roger W. Staehle, 2012-12-06 This series was organized to provide a forum for review papers in the area of corrosion The aim of these reviews is to bring certain areas of corrosion science and technology into a sharp focus The volumes of this series are published approximately on a yearly basis and each contains three to five reviews The articles in each volume are selected in such a way as to be of interest both to the corrosion scientists and the corrosion technologists There is in fact a particular aim in juxtaposing these interests because of the importance of mutual interaction and interdisciplinarity so important in corrosion studies It is hoped that the corrosion scientists in this way may stay abreast of the activities in corrosion technology and vice versa In this series the term corrosion is used in its very broadest sense It includes therefore not only the degradation of metals in aqueous environment but also what is commonly referred to as high temperature oxidation Further the plan is to be even more general than these topics the series will include all solids and all environments Today engineering solids include not only metals but glasses ionic solids polymeric solids and composites of these Environments of interest must be extended to liquid metals a wide variety of gases nonaqueous electrolytes and other non aqueous liquids Diffusion Data, 1973 **NBS Special Publication**, 1968 *Mass Transport in Oxides* J. B. Wachtman, Alan D. Franklin, 1968 **Point Defects in Solids** James H. Crawford, Lawrence M. Slifkin, 2012-12-06 Volume 1 of Point Defects in Solids has as its major emphasis defects in ionic solids Volume 2 now extends this emphasis to semiconductors The first four chapters treat in some detail the creation kinetic behavior interactions and physical properties of both simple and composite defects in a variety of semiconducting systems Also included as in Vol 1 are chapters on special topics namely phonon defect interactions and defects in organic crystals Defect behavior in semiconductors has been a subject of considerable interest since the discovery some twenty five years ago that fast neutron irradiation profoundly

affected the electrical characteristics of germanium and silicon Present day interest has been stimulated by such semiconductor applications as solar cell power plants for space stations and satellites and semiconductor particle and y ray detectors since in both radiation damage can cause serious deterioration Of even greater practical concern is the need to understand particle damage in order to capitalize upon the develop ing technique of ion implantation as a means of device fabrication Although the periodic international conferences on radiation effects in semiconductors have served the valuable function of summarizing the extensive work being done in this field these proceedings are much too detailed and lack the background discussion needed to make them useful to the novice

Critical Evaluation of Data in the Physical Sciences National Measurement Laboratory (U.S.). Office of Standard Reference Data,1975 NBS Technical Note ,1975

Superplasticity in Ice David Leslie Goldsby,1997 Diffusion in Halides D. J. Fisher,2014 The present issue comprises a compilation of data on diffusion in halides in either the crystalline or molten state that is diffusion in aqueous systems is not covered The data cover a period of almost 50 years from 1965 to the beginning of 2014 The over 700 entries 205 tables and 34 figures will provide an invaluable wealth of information on diffusion in this class of material *Publications of the National Bureau of Standards 1978 Catalog* United States. National Bureau of Standards,1979

Nuclear Science Abstracts ,1973 U.S. Government Research & Development Reports ,1969-10 The NBS Alloy Data Center Gesina C. Carter,1968 The Alloy Data Center part of the National Standard Reference Data System has two primary functions One is to stimulate cooperation and coordination among the existing data centers in the area of the physical properties of well characterized alloys The final data generated by these centers for publication should be consistent with one another where correlation or possible overlap exists The other purpose is the collection from publications as well as private communications evaluation and publication of data in some areas where special competence exists in the Alloy Physics Section Of interest to the center are metals semimetals intermetallic compounds and alloys Excluded are those materials which have ill defined constitutions and heat treatments An automated system was developed to meet the bibliographic needs of the center This system will be described as well as the specific properties of interest The system presently contains a complete annotated file dealing with NMR Knight shift measurements The soft X ray spectroscopy compilation is being kept up to date with the same system Author

Mass Transport in Solids and Fluids David S. Wilkinson,2000-11-02 The field of matter transport is central to understanding the processing of materials and their subsequent mechanical properties While thermodynamics determines the final state of a material system it is the kinetics of mass transport that governs how it gets there This book first published in 2000 gives a solid grounding in the principles of matter transport and their application to a range of engineering problems The author develops a unified treatment of mass transport applicable to both solids and liquids Traditionally matter transport in fluids is considered as an extension of heat transfer and can appear to have little relationship to diffusion in solids This unified approach clearly makes the connection between these important fields This

book is aimed at advanced undergraduate and beginning graduate students of materials science and engineering and related disciplines It contains numerous worked examples and unsolved problems The material can be covered in a one semester course
