## **How To Conquer Air Pollution A Japanese Experience:**

**How to Conquer Air Pollution** H. Nishimura, 1989      **How to Conquer Air Pollution** H. Nishimura, 1989-11-23 Many parts of the world suffer from urban air pollution and despite the vast amount of knowledge about its causes most countries are slow to implement counter measures An outstanding exception is Tokyo which once blanketed in a mantle of smog now enjoys clean air in spite of highly concentrated activity and congested traffic Based on the successful Japanese experience this book describes all aspects of the measures necessary to combat air pollution It begins with a well documented history of the fight against air pollution and describes the processes and mechanisms of reaching a social consensus on pollution control The essential steps in the process are the establishment of ambient air quality standards the introduction of the total allowable mass of emission and the legal control of each emission based on diffusion equations The scientific background to this approach is fully explained from epidemiology to computer simulations of air quality An up to date account of emission control technology is also given and the controversial issue of health damage compensation is examined based on actual experience An important feature of the book is that it is written by authors who were actually in the forefront of the battle against air pollution in Japan Two of them worked successively as Director General of the Bureau of Air Quality of the central government and a third helped local governments to force the central government to implement the most stringent auto emission controls in the world The book is intended not only for scientists engineers and administrative planners dealing with pollution control but also for anyone concerned about the serious global problem of urban air pollution      [Acid Rain Science and Politics in Japan](#) Kenneth E. Wilkening, 2004-05-21 Acid Rain Science and Politics in Japan is a pioneering work in environmental and Asian history as well as an in depth analysis of the influence of science on domestic and international environmental politics Kenneth Wilkening s study also illuminates the global struggle to create sustainable societies The Meiji Restoration of 1868 ended Japan s era of isolation created self sufficiency and sustainability The opening of the country to Western ideas and technology not only brought pollution problems associated with industrialization including acid rain but also scientific techniques for understanding and combating them Wilkening identifies three pollution related sustainability crises in modern Japanese history copper mining in the late nineteenth and early twentieth centuries which spurred Japan s first acid rain research and policy initiatives horrendous post World War II domestic industrial pollution which resulted in a hidden acid rain problem and the present day global problem of transboundary pollution in which Japan is a victim of imported acid rain He traces the country s scientific and policy responses to these crises through six distinct periods related to acid rain problems and argues that Japan s leadership role in East Asian acid rain science and policy today can be explained in large part by the historical scientific momentum generated by efforts to confront the issue since 1868 reinforced by Japan s cultural affinity with rain its culture of rain Wilkening provides an overview of nature culture and the acid rain problem in Japan to complement the general set of concepts he develops to analyze the interface of science and politics in

environmental policymaking He concludes with a discussion of lessons from Japan s experience that can be applied to the creation of sustainable societies worldwide      **Biotechniques for Air Pollution Abatement and Odour Control Policies**

A.J. Dragt,J. van Ham,1992-06-26 The increasing concern for odour abatement and more generally for reduction of air pollution has caused a rapid growth in the development of air pollution control techniques several of which are based on biological degradation of the polluting compounds This book presents a state of the art overview of recent developments in biological techniques for air pollution control It describes in detail processes for the prevention of odour nuisances and reduction of odour emissions It also deals with process design and construction of equipment as well as with odour policy measurements at an international level      **Aquatic Bioenvironmental Studies: The Hanford Experience: 1944-1984**

C.D. Becker,1990-09-11 From 1944 1971 the Hanford Reach of the Colombia River in Washington State received quantities of radioisotopes heat and chemicals from up to 8 plutonium reactors Subsequently from 1971 1984 the same part of the river provided cooling water for 3 power production facilities Environmental concerns promoted a series of continuing studies to examine various potential adverse effects No significant impairment of the rivers ecosystem was detected This book reviews these studies and places them in a historical framework It provides a unique overview of studies made over a 40 year period which are now scattered through various published and unpublished documents It should be of interest to all those concerned with aquatic ecology and environmental concerns      **A Companion to Global Environmental History** J. R.

McNeill,Erin Stewart Mauldin,2015-05-04 The Companion to Global Environmental History offers multiple points of entry into the history and historiography of this dynamic and fast growing field to provide an essential road map to past developments current controversies and future developments for specialists and newcomers alike Combines temporal geographic thematic and contextual approaches from prehistory to the present day Explores environmental thought and action around the world to give readers a cultural intellectual and political context for engagement with the environment in modern times Brings together environmental historians from around the world including scholars from South Africa Brazil Germany and China      **Nature, Environment and Culture in East Asia** ,2013-07-15 Since in the current global

environmental and climate crisis East Asia will play a major role in negotiating solutions it is vital to understand East Asian cultural variations in approaching and solving environmental challenges in the past present and future The interdisciplinary volume Nature Environment and Culture in East Asia The Challenge of Climate Change edited by Carmen Meinert explores how cultural patterns and ideas have shaped a specific understanding of nature how local and regional cultures develop ed coping strategies to adapt to environmental and climatic changes in the past and in the present and how various institutions and representatives might introduce their ideas and agendas in future environmental and climate policies on national levels and in international negotiating systems      **Environmental Science Theory** W.T. de Groot,1992-10-22 Having no competitive works this unique publication presents a single structure for the analysis explanation and solution of

environmental problems regardless of their location nature or scale In this problem oriented approach a coherent framework interconnects the study of facts and values environmental systems social causes and ethical premises Counterbalancing current biases the author emphasizes the fundamental normative economic and social scientific aspects of truly interdisciplinary environmental science For instance the normative side of environmental problems are often neglected resulting in policy designs and evaluations containing inefficient mixtures of sophisticated models and poorly grounded normative premises this is the first major study to enrich the field with more normative consistency and groundedness It is also the first text to consistently identify the social causes of environmental problems rather than focusing on the physical scientific aspects and thus design deeper and more effective policies Furthermore a tinge of post modern thinking runs throughout the book with special care being taken however to constantly keep in view the practical relevance of theory for problem oriented work The book will be of interest to environmental scientists and managers wishing to improve the consistency and depth of their work to social scientists and geographers wishing to connect their discipline to the environmental problems field and to general scientists interested in the connections between philosophy and practice

*The Oxford Handbook of Comparative Environmental Law* Emma Lees, Jorge E. Viñuales, 2019-04-25 This Handbook is the first comprehensive account of comparative environmental law It examines in detail the methodological foundations of the discipline as well as the substance of environmental law across countries from four vantage points country studies from all continents responses to common problems including air pollution water management nature conservation genetically modified organisms climate change and energy chemicals waste foundational components of environmental law systems including principles property rights administrative and judicial organisation command and control regulation market mechanisms informational techniques and liability mechanisms and common interactions of environmental protection with the broader public private and criminal law contexts The volume brings together the foremost authorities in this field from around the world to provide a concise self contained and technically rigorous account of environmental law as a single overall system

**Pollution Control in United States** J. Clarence Davies, 2014-04-04 Pollution control a key component of U S environmental policy has made important progress in recent decades Yet important problems remain and there is need for improvement in the pollution control regulatory system This book is the most extensive evaluation of that system ever produced It reveals many strengths and accomplishments but also illustrates serious shortcomings and the need for reform The volume emerges from three years of research on a fragmented system of institutions statutes and procedures that is often inefficient and ineffective hobbled by misplaced priorities Part I provides an in depth description of this system centered on the federal Environmental Protection Agency and the labyrinthine laws it must implement The authors evaluate the federal legislation administrative decisionmaking and the state federal division of labor that defines the system Davies and Mazurek assess the effectiveness and efficiency of U S pollution control They discuss the performance of U S laws and

regulations in comparison with those of other nations assess the ability of the U S pollution control system to meet future problems and consider proposals for reform and repair Within this far reaching analysis they include criteria that are often overlooked by policymakers and analysts including social values equity nonintrusiveness and public participation *Carbon Technocracy* Victor Seow, 2023-05-10 A forceful reckoning with the relationship between energy and power through the history of what was once East Asia s largest coal mine The coal mining town of Fushun in China s Northeast is home to a monstrous open pit First excavated in the early twentieth century this pit grew like a widening maw over the ensuing decades as various Chinese and Japanese states endeavored to unearth Fushun s purportedly inexhaustible carbon resources Today the depleted mine that remains is a wondrous and terrifying monument to fantasies of a fossil fueled future and the technologies mobilized in attempts to turn those developmentalist dreams into reality In *Carbon Technocracy* Victor Seow uses the remarkable story of the Fushun colliery to chart how the fossil fuel economy emerged in tandem with the rise of the modern technocratic state Taking coal as an essential feedstock of national wealth and power Chinese and Japanese bureaucrats engineers and industrialists deployed new technologies like open pit mining and hydraulic stowage in pursuit of intensive energy extraction But as much as these mine operators idealized the might of fossil fuel driven machines their extractive efforts nevertheless relied heavily on the human labor that those devices were expected to displace Under the carbon energy regime countless workers here and elsewhere would be subjected to invasive techniques of labor control ever escalating output targets and the dangers of an increasingly exploited earth Although Fushun is no longer the coal capital it once was the pattern of aggressive fossil fueled development that led to its ascent endures As we confront a planetary crisis precipitated by our extravagant consumption of carbon it holds urgent lessons This is a groundbreaking exploration of how the mutual production of energy and power came to define industrial modernity and the wider world that carbon made

**Time Strategies, Innovation, and Environmental Policy** Christian Sartorius, Stefan Zundel, 2005-01-01 Timeliness is a particularly relevant issue in the field of innovation and diffusion research This book originates from the observation that innovations are time critical and asks the question when and how do windows of opportunity for new environmental technologies emerge and why do they disappear again By analysing these windows of opportunity and possible time strategies for innovation policies this book represents a highly topical contribution to a front line issue in environmental and innovation research The theoretical framework is applied to well investigated and highly informative case studies to produce an interesting insightful and coherent volume Joseph Huber Martin Luther University Halle Germany This book is the first attempt to systematically introduce the aspect of time into economic and environmental innovation policy The authors demonstrate how windows of opportunity for technological innovations emerge and also explain how they can be identified and effectively exploited Technological innovations are widely considered as an opportunity to realise a double dividend protect the environment and increase profits by introducing a more sustainable technology However intervention by the state

is often needed to overcome the competitive disadvantage caused by externalities path dependency and lock in The authors provide extensive evidence that this resistance to technological change is subject to substantial temporal variation They argue that it is economically and politically sensible to identify periods of time in which resistance is weakest and to exploit these windows of opportunity whenever and wherever they occur They also highlight how time strategies for innovation policy can involve the preparation and creation of windows which do not yet exist Throughout the book they use an array of varied and interesting case studies to confirm and illustrate their theoretical findings These address issues such as CFC phase out the lean burn engine versus the catalytic converter ecological alternatives to chemical pesticides and the zero emission vehicle mandate in California By exploring the relationship between time strategies and technological change this book will undoubtedly lead to a more efficient and sustainable innovation policy It will be required reading for academics researchers and policymakers working in the fields of environmental innovation sustainability technology policy and political science

*Impact Assessment and Sustainable Resource Management* L.Graham Smith,2014-09-11 Firmly places impact assessment in the broader context of environmental planning developing a much needed integrative approach The topics covered include decision making and dispute resolution the role of environmental law public policy administration and publication participation the nature of planning impact assessment methodology the application of impact assessment to frontier developments linear facilities and waste management

Environmental Regulation Through Financial Organisations:Comparative Perspectives on the Industrialised Nations Benjamin Richardson,2002-02-13 This book takes a comparative perspective of practice in the European Union North America Japan and Australasia arguing that existing legal reforms to promote sustainable development are unlikely to be successful unless environmental policy can be diffused and embedded in the financial services sector This sector plays a crucial role in creating the financial conditions that allow much economic development to proceed Financial markets are already highly regulated in pursuance of various public policy objectives and there is scope to adapt existing regulation to incorporate environmental aspects into the financial services sector In terms of specific reforms the book focuses on the role of corporate environmental reporting economic instruments and liability rules to provide a proper context for engaging financial organisations with the environment as well as reforms to the system of prudential regulation that currently governs this sector Beyond the focus on the financial services sector the book raises complex questions regarding the relationship between the state and market institutions in environmental policy and will appeal to scholars from a wide range of disciplines interested in problems of environmental governance

**The Great Acceleration** J. R. McNeill,Peter Engelke,2016-04-04 The pace of energy use greenhouse gas emissions and population growth has thrust the planet into a new age the Anthropocene Humans have altered the planet's biogeochemical systems without consciously managing them The Great Acceleration explains the causes consequences and uncertainties of this massive uncontrolled experiment

Global Interdependence Akira Iriye,Jürgen Osterhammel,2014-01-14 Global

Interdependence provides a new account of world history from the end of WWII to the present an era when transnational communities challenged the long domination of the nation state Leading scholars elucidate the political economic cultural and environmental forces that have shaped the planet in the past sixty years      **Acid Rain Research: Do We Have Enough Answers?** J.W. Erisman,G.J. Heij,1995-06-28 Representing the Proceedings of the International Speciality Conference Acid Rain Research Do we have enough answers this book provides a valuable conclusion to the coordinated research on acidification in the Netherlands from 1985 to 1994 The book focuses on atmospheric deposition effects of acid deposition on forest ecosystems in the Netherlands and future acidification research Special attention is given to trace gases ammonia and particle deposition and the overall assessment of deposition loads to ecosystems and soils is also discussed This volume will be invaluable to environmental scientists ecologists and those involved in atmospheric science pollution

**Market- Based Instruments for Environmental Management** Mikael Skou Andersen,Rolf-Ulrich Sprenger,2000-01-01 This volume brings together contributions from political scientists and environmental economists and will prove invaluable for academics practitioners and policymakers interested in the experiences of countries where market based instruments are well established BOOK JACKET      **Environmental Chemistry: Asian Lessons** V.N. Bashkin,2007-05-08 At present environmental chemistry is becoming an increasingly popular subject in both under graduate and graduated education in the whole World and especially in all Asian countries Different courses in ecology chemistry environmental science public health geography biology and environmental engineering all include this subject in their curriculum Many textbooks have appeared in recent years aiming to fulfill these requirements however most of these books operate mainly with examples from developed countries of Europe USA and Canada Taking into account the geographic boundaries of environmental pollution that is especially pronounced in Asia and the specific peculiarities of pollution in developing countries this textbook is supposed to close the gap by providing regionally oriented knowledge in basic and applied environmental chemistry      **Energy and Environment Regulation** Helen Lawton Smith,Nick Woodward,2016-07-27 The central theme of this book is the relationship between the regulation of energy production and environmental regulation The book explores four themes Assessing Regulatory Impacts Energy Pricing Public Policy towards New Investment and Multi Regulation and includes contributions from leading analysts in the fields of economics law politics business and technology policy
