Telotte,2010-10-01 Throughout Disney s phenomenally successful run in the entertainment industry the company has negotiated the use of cutting edge film and media technologies that J P Telotte argues have proven fundamental to the company s identity Disney s technological developments include the use of stereophonic surround sound for Fantasia experimentation with wide screen technology inaugural adoption of three strip Technicolor film and early efforts at fostering depth in the animated image Telotte also chronicles Disney s partnership with television development of the theme park and depiction of technology in science fiction narratives An in depth discussion of Disney s shift into digital filmmaking with its Pixar partnership and an emphasis on digital special effects in live action films such as the Pirates of the Caribbean series also highlight the studio s historical investment in technology By exploring the technological context for Disney creations throughout its history The Mouse Machine illuminates Disney s extraordinary growth into one of the largest and most influential media and entertainment companies in the world Hardback is unjacketed   **Star Ark** Rachel Armstrong,2016-11-13 As space ventures have become more numerous leading scientists and theorists have offered ways of building a living habitat in a hostile environment taking an ecosystems view of space colonization The contributors to this volume take a radical multi disciplinary view of the challenge of human space colonization through the ongoing project Persephone This book fundamentally challenges prevalent ideas about sustainability and proposes a new approach to resource austerity and conservation and providing truly sustainable approaches that are life promoting Readers will learn the details of the plans for Persephone a real project that is part of the company Icarus Interstellar s plans for the design and engineering of a living interior on a worldship to be constructed in Earth s orbit within 100 years Although the timeframe

itself is only an estimate since it is contingent on many significant developments including funding and technological advances the industry consensus is that within 100 years we will see manned space exploration beyond our solar system This notion is shared by organizations such as the Initiative for Interstellar Studies and the DARPA funded 100 year starship project This book specifically develops the principles for the construction of a living habitat within a worldship a multi generational starship that contains its own world that supports colonists as it travels across great distances between stars at a speed much slower than light Far from being a sterile industrial setup such as the ISS or even being a bucolic suburbia as proposed by Gerard O Neill in the 1970s this worldship will provide the pre conditions for sustaining life beyond Earth s environment which may also lead to the evolution of non terrestrial ecologies Drawing on the principles of ecopoiesis and insights offered by the Biosphere 2 experiment that demonstrated what we have to learn about ecosystem construction this book proposes first designing the soils of such a space It should then be possible to set up the conditions that a first generation of colonists may experience in leaving our solar system to find new worlds to settle perhaps in spreading life throughout the universe Although the book takes a unique view of ecology and sustainability within the setting of a traveling starship it is equally concerned with the human experience on artificial worlds Chapters come from a range of multi disciplinary thinkers who shed light on the brave new future ahead from different angles
