Interpretation of Visual Motion Muralidhara Subbarao,1988 **Interpretation of Visual Motion** Muralidhara Subbarao,2014-07-10 Interpretation of Visual Motion A Computational Study provides an information processing point of view to the phenomenon of visual motion This book discusses the computational theory formulated for recovering the scene from monocular visual motion determining the local geometry and rigid body motion of surfaces from spatio temporal parameters of visual motion This compilation also provides a theoretical and computational framework for future research on visual motion both in human vision and machine vision areas Other topics include the computation of image flow from intensity derivatives instantaneous image flow due to rigid motion time and space time derivatives of image flow and estimation of maximum absolute error This publication is recommended for professionals and non specialists intending to acquire knowledge of visual motion Intelligent Robots and Computer Vision ,1991 **Manual of Photogrammetry** Roy Mullen,American Society for Photogrammetry and Remote Sensing,2004 Experiments in the Machine Interpretation of Visual Motion David W. Murray,Bernard F. Buxton,1990 This book describes experimental advances made in the interpretation of visual motion over the last few years that have moved researchers closer to emulating the way in which we recover information about the surrounding world **Subject Guide to Books in Print** ,1997 *Readings in Computer Vision* Martin A. Fischler,Oscar Firschein,2014-06-28 The field of computer vision combines techniques from physics mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume **American Book Publishing Record** ,1995 Forthcoming Books Rose Arny,1989-09

Proceedings of the Ninth International Joint Conference on Artificial Intelligence International Joint Conferences on Artificial Intelligence,1985 Computation and Human Experience Philip Agre,1997-07-28 By paying close attention to the metaphors of artificial intelligence and their consequences for the field s patterns of success and failure this text argues for a reorientation of the field away from thought and toward activity It offers a critical reconstruction of AI research
