International Symposium On Nanometer Structure Electronics:

Nanometer Structure Electronics T. Jujisawa, Y. Yamamura, 1984 Nanometer Structure Electronics Yuichi Yamamura, 1984 Molecular Electronics F.T. Hong, 2012-12-06 The dream of developing a biocomputer should not be dismissed as a sheer fantasy Although there is naturally some doubt as to whether it is possible to design a computer using carbon based components as in living organisms instead of silicon based components as in existing computers the fact that an average brain often outperforms the most sophisticated computer in terms of the complexity of tasks if not in terms of speed is a living testimony to this possibility The remaining question is to what extent a biocomputer can mimic a living organism and whether it is possible to design and fabricate such a biocomputer within the foreseeable future This volume does not attempt to provide immediate and exact answers to these questions but instead attempts to provide a vision and a progress report of the initial efforts This volume is mainly a collection of papers presented at the Symposium on Molecular Electronics Biosensors and Biocomputers sponsored by the Division of Biotechnology Health and Environment of the Fine Particle Society held from July 19-22 1989 at the Society's 19th Annual Meeting in Santa Clara California Also included are articles contributed by those who planned to attend the conference but were unable to do so The emergence of the field of molecular electronics is largely the consequence of one person's crusade that of Forrest L Carter *Surface & Coatings Technology* J. P. G. Farr, B. D. Sartwell, 2016-06-03 Surface Coatings Technology represents the start of a new era for the journal not only with the change in title to Surface and Coatings Technology but also with the significant change in the journal's scope which is intended to place it in the forefront of the coatings and surface modification field This presents volume contains 100 contributions It is intended to become the principal forum for the interchange of information on the science technology and application of coatings and modified surfaces as they relate to modification of the mechanical chemical or optical properties of materials The aim of the journal is to publish research papers and invited review articles on various subjects A new feature will be the addition of a short section at the beginning of each issue in which each author states which technical problems are being addressed in his article These will be catalogued at the end of each year in order that a scientist or engineer who has a particular problem related to coatings can determine whether there were any papers that addressed the problem It is hoped that Surface and Coatings Technology will have a significant impact in one of the most exciting areas of materials research being investigated today **Proceedings of the International Symposium Quantum Chemistry and Technology in the Mesoscopic Level** Hiroshi Hasegawa, 1994 Review, 1988

interest in the simulation and synthesis of living systems During five intense days we saw a wide variety of models of living systems including mathematical models for the origin of life self reproducing automata computer programs using the mechanisms of Darwinian evolution to produce co adapted ecosystems simulations of flocking birds and schooling fish the growth and development of artificial plants and much much more The workshop itself grew out of my frustration with the fragmented nature of the literature on biological modeling and simulation For years I had prowled around libraries shifted through computer search results and haunted bookstores trying to get an overview of a field which I sensed existed but which did not seem to have any coherence or unity Instead I literally kept stumbling over interesting work almost by accident often published in obscure journals if published at all
