Information Practices Reijo Savolainen,2008 In general information practices are viewed as tools that people use to further their everyday projects Essentially information practices draw on personal stocks of knowledge that form the habitual starting point of information seeking use and sharing To judge the value of information available in external sources like newspapers and the Internet people construct information source horizons assigning an order of preference to information sources and information seeking paths such as first check the net then visit the library *Understanding the Internet* Bridgette Wessels,2017-09-16 The Internet is an everyday part of our contemporary lives This book explores how it is shaped and embedded within society fostering new social worlds and ways of talking Using a wide range of examples to examine economic political and cultural issues this book is crucial reading for all those studying society media and technology **Internet use and digital participation in everyday life** Kristin Alfredsson Ågren,2020-08-20 Background Internet use is an integral part of everyday life in contemporary society especially among young people It is used to perform activities in everyday life by an increasing proportion of the population However knowledge about access to and use of the internet by adolescents and young adults with intellectual disabilities ID is scarce More knowledge is needed about digital competencies and digital participation in their everyday lives Aim The overall aim of this thesis was to explore and describe internet access and use and digital participation in everyday life among adolescents and young adults with intellectual disabilities Designs and Methods The thesis is based on results from three studies In study I the focus was on access to and use of the internet in the everyday settings of school work at home or during free time Data was collected through observations conversations and follow up interviews with 15 participants with ID aged 13 24 years The data was analysed using qualitative content analysis In studies II and III the design was cross sectional and comparative using national surveys on media and internet use from the Swedish Media Council from which comparative data from reference groups could be gained In study II the national survey of adolescents on internet access and use was cognitively adapted for adolescents with intellectual disabilities aged 13 20 years in several steps This made it accessible to a total selection of pupils from all the special schools in four diverse municipalities in two different regions of Sweden In study III the national survey of parents about opportunities and risks of internet use by their adolescents was used The surveys were sent to a sample of n 318 adolescents with ID and their caregivers parents The responses were higher for the adolescents n 114 than for the parents n 99 and the response rate of the adolescents with ID was equivalent as that of the reference group at 36% and 38% respectively In study II chi square tests were used and when necessary Fisher s exact test to analyse the data In study III analyses were carried out using Fisher s exact test and logistic regression to control for confounding factors Results This thesis show that access to internet enabled devices is lower for adolescents with ID than for the general population except for tablets study II All internet activities except playing games are performed by fewer adolescents with ID compared to the reference group study II and the time spent on the internet activities is less study III Both environmental challenges and personal abilities present difficulties

in internet access and use study I and affect digital participation for adolescents and young adults with ID Furthermore a significantly higher proportion of parents of adolescents with ID perceive opportunities associated with internet use and playing games and a lower proportion perceive risks with negative consequences or have concerns about online risks compared with the reference group study III Significantly more parents of adolescents with ID state that their adolescent never uses smartphones or social media compared with the reference group Strategies used to handle the digital environment and take part in internet activities were found and described such as getting support from others reducing the number of internet enabled devices used and personalising them Gaining access to internet content and performing internet activities was facilitated by picture word and voice based strategies which were used by adolescents and young adults with both mild and moderate ID study I Conclusions The conclusions are that the results show a lag in internet access and use and in digital participation by adolescents and young adults with ID Adolescents and young adults with ID were accessing and using the internet in similar ways to the reference group but to a lesser extent The impact of the participants environment together with their lack of certain abilities make the development of digital competencies difficult for them The result that parents of adolescents with ID perceive more opportunities and fewer risks associated with the internet provides new knowledge to support positive risk taking in internet use and enable digital participation by adolescents and young adults with ID Support can be developed in collaboration between the adolescent young adult their parents and teachers and staff in community based services and should involve physical social and digital environmental adaptations These can enable the development of digital competencies and minimise the lag in digital participation in everyday life which is needed for participation in today s digitalised society Bakgrund till avhandlingen Internetanv ndning r en integrerad del av vardagen i dagens samh lle s rskilt bland ungdomar Internet anv nds f r att utf ra en m ngd aktiviteter i vardagen av alltfler personer Dock r kunskapen om tillg ng till samt anv ndning av internet i vardagliga aktiviteter f r ungdomar med intellektuell funktionsneds ttning IF bristf llig kad kunskap beh vs om digitala kompetenser och digital delaktighet i vardagen f r ungdomar och unga vuxna med IF Syftet med avhandlingen Det vergripande syftet med denna avhandling var att utforska och beskriva tillg ng till och anv ndning av internet och digital delaktighet i vardagen bland ungdomar och unga vuxna med IF Hur studierna genomf rdes Avhandlingen bygger p resultat fr n tre delstudier I studie I samlades data in via observationer av och uppf ljande intervjuer med 15 deltagare med IF i ldern 13 24 r Fokus l g p tillg ng till och anv ndning av internet i deras vardagliga milj er skola arbete hemma eller p fritiden Data analyserades med kvalitativ inneh llsanalys I studie II och III var designen j mf rande tv rsnittsstudier Nationella enk ter fr n Statens Medier d om medie och internetanv ndning anv ndes d r j mf rande data fr n referensgrupper kunde erh llas I studie II gjordes kognitiva anpassningar av den nationella enk ten om medie och internetanv ndning i flera steg f r m lgruppen ungdomar med IF i ldern 13 20 r Anpassningen till en l ttl st version av enk ten med bildst d f r de som beh vde det gjorde den m jlig att skicka till ett totalurval av elever fr n alla s
