

# INTERNET

The internet is increasingly being used for the delivery of educational material and distance education. Internet-based learning allows students to learn at their own pace, access the information at a time that is convenient of them, and provides education to remote students that otherwise would not be able to travel to a classroom.

## **Internet Based Distance Learning:**

**Teaching and Learning at a Distance** Michael Simonson, Sharon Smaldino, Susan M. Zvacek, 2014-10-01 Teaching and Learning at a Distance is written for introductory distance education courses for preservice or in service teachers and for training programs that discuss teaching distant learners or managing distance education systems This text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs The teacher or trainer who uses this book will be able to distinguish between appropriate uses of distance education In this text we take the following themes The first theme is the definition of distance education Before we started writing the first edition of Teaching and Learning at a Distance we carefully reviewed the literature to determine the definition that would be at the foundation of our writing This definition is based on the work of Desmond Keegan but is unique to this book This definition of distance education has been adopted by the Association for Educational Communications and Technology and by the Encyclopedia Britannica The second theme of the book was the importance of research to the development of the contents of the book The best practices presented in Teaching and Learning at a Distance are validated by scientific evidence Certainly there are rules of thumb but we have always attempted to only include recommendations that can be supported by research The third theme of Teaching and Learning at a distance is derived from Richard Clark s famous quote published in the Review of Educational Research that states that media are mere vehicles that do not directly influence achievement Clark s controversial work is discussed in the book but is also fundamental to the book s advocacy for distance education in other words we authors did not make the claim that education delivered at a distance was inherently better than other ways people learn Distance delivered instruction is not a magical approach that makes learners achieve more The fourth theme of the book is equivalency theory Here we presented the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment Equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face to face classroom The final theme for Teaching and Learning at a Distance is the idea that the book should be comprehensive that it should cover as much of the various ways instruction is made available to distant learners as is possible It should be a single source of information about the field

Online Distance Education Margaret Gorts Morabito, 1999 Many educators and the public are interested in online distance education in particular Internet based schooling The underlying assumption is that this is a new and untested fad in education This is due in part to a lack of documentation within academia of the early development of online distance education and in part to a shortage of experienced practicing online schools On the Internet one may become confused by the flurry of activity and by the various claims from organizations that they are providing a revolutionary method of instruction online teaching Furthermore many people are unaware of the long and distinguished history of distance education itself that is the root of current day Internet based schooling Despite the uncertainty the public

is clearly demanding online distance education This dissertation helps to resolve these problems This study fills various needs for the purpose of showing the effective application of online distance education Educational administrators teachers and the public must be assured that online distance teaching is a valid and proven instructional method Furthermore administrators and teachers need to know what to expect when planning operating and teaching in an online school Through historical analysis and the presentation of a practicing Internet based school this study fills these needs This dissertation results from fifteen years of independent study and research by the author combined with professional experience in the field of online distance education including Internet based school design and operation Conclusions result from published studies in distance education from research conducted in the 1980s concerning publicly available online distance education and from experience in developing administrating and teaching in an international Internet based school that has been in continual operation online since 1986 The author concludes that 1 online distance education has a proven track record 2 there is continual demand from the global community for Internet based instruction as well as a public demand for traditional institutions to accept this nontraditional method of study and 3 administrators and teachers can economically create and operate an effective Internet based school that is accessible to and affordable for individual learners using low cost personal computers
