Interpretation Of Archaeological Spatial Patterning:

The Interpretation of Archaeological Spatial Patterning Ellen M. Kroll, T. Douglas Price, 2013-06-29 Investigations of archaeological intrasite spatial patterns have generally taken one of two directions: studies that introduced and explored methods for the analysis of archaeological spatial patterns or those that described and analyzed the formation of spatial patterns in actualistic ethnographic experimental or natural contexts. The archaeological studies were largely quantitative in nature, concerned with the recognition and definition of patterns; the actualistic efforts were often oriented more toward interpretation, dealing with how patterns formed and what they meant. Our research group on archaeological spatial analysis at the University of Wisconsin-Madison has been working for several years on both quantitative and interpretive problems. Both lines of investigation are closely related and are important complements. In order to demonstrate the convergence of archaeological and actualistic studies for the understanding of intrasite spatial patterns, we organized a symposium at the 52nd Annual Meeting of the Society of American Archaeology in Toronto, Canada, in May 1987. The symposium, titled *The Interpretation of Stone Age Archaeological Spatial Patterns*, was organized into two sessions. The six papers presented in the morning session, five of which comprise Part I of this volume, focused on ethnoarchaeological and experimental research. Michael Schiffer was the discussant for this half of the symposium. Our intention for the ethnoarchaeological contributions to the symposium and volume was the delineation of some of the significant accomplishments achieved thus far by actualistic studies regarding the formation of spatial patterns.

The Interpretation of Archaeological Spatial Patterning ed KROLL, 1991 *Exploratory Multivariate Analysis in Archaeology* M. J. Baxter, 2015-12-31 This volume presents four techniques of multivariate analysis commonly used by archaeologists: principal component analysis, correspondence analysis, cluster analysis, and discriminant analysis. Employing ordinary language and real data sets and including extensive literature reviews, the book illustrates how these statistical techniques can be applied to specific archaeological questions. A new introduction by the author updates his discussion in light of subsequent developments in the field of quantitative archaeology. Originally published by Edinburgh University Press in 1994. **The Archaeology Coursebook** Jim Grant, Sam Gorin, Neil Fleming, 2005 Fully revised with new case studies, 300 photographs and diagrams, and new material on British prehistory and the Roman empire, this book provides students with the skills and technical concepts essential to the study of archaeology.

New Approaches to Old Stones Yorke M. Rowan, Jennie R. Ebeling, 2016-04-08 Ground stone artefacts were widely used in food production in prehistory. However, the archaeological community has widely neglected the dataset of ground stone artefacts until now. *New Approaches to Old Stones* offers a theoretical and methodological analysis of the archaeological data pertaining to ground stone tools. The essays draw on a range of case studies from the Levant, Egypt, Crete, Anatolia, Mexico, and North America to examine ground stone technologies.
