Elastic and Diffractive Scattering Italian Institute for Nuclear Research, 1992 High-Energy Particle Diffraction Vincenzo Barone, Enrico Predazzi, 2013-03-09 High energy diffraction has become a hot and fashionable subject in recent years due to the great interest triggered by the HERA and Tevatron data These data have helped to show the field from a different perspective paving the road to a hopefully more complete understanding than hitherto achieved The forthcoming data in the next few years from even higher energies LHC promise to sustain this interest for a long time We believe that it is therefore necessary to summarize the main developments which have marked the growth of high energy diffractive physics in recent decades and to assess the present state of the art This is the purpose of the present book which is especially aimed at the young researchers who are entering the field and want to get acquainted with the relevant results and the main theoretical techniques The new diffraction has started to bridge the gap between the hard and soft regimes of strong interactions A modern account of the subject in our opinion should reflect this situation covering both the traditional approaches to soft processes which are still alive and useful and the modern treatment of hard dynamics in the framework of perturbative QCD The book is divided into three parts The first part Chaps 1-3 contains some introductory material the systematics of diffractive processes some historical remarks the optical analogy the eikonal approximation of quantum mechanics and high energy kinematics In the second part Chaps
