*The Human Inheritance* Brian D. Sykes, Bryan Sykes, 1999 Very little excites human curiosity quite so much as contemplating human origins More than any other branch of science evolution and human evolution in particular is fraught with controversy Working from what is essentially the same data schools of opinion have come to diametrically opposed conclusions Are we adapted Neanderthals or a new species altogether which wiped them out Did the first Americans enter the continent 30 000 or 12 000 years ago Did the Polynesians sail against wind and current to an unknown fate or were they just blown across from South America while out fishing Why do we speak different languages Is it because language traces our biological history or are the two things completely unrelated Evolution because it deals with a past that can never conclusively be known was once ideal material for perpetual debate Enter genetics with a completely new source of objective data Surely these old questions would soon be settled one way or another Or would they Bryan Sykes brings together a world class set of contributors to debate these questions The result is eight lively essays each of which offers a different opinion about what the links between genes language and the archaeological record can tell us about human evolution and indeed whether they can tell us anything conclusive at all This stimulating and challenging book poses more questions than it offers answers eschews jargon and pursues controversy Guaranteed to fascinate anyone who has ever wondered how the fossil record the incredible diversity of human language and our genetic inheritance might combine to give a glimpse of human origins

**Cultural Evolution** Peter J. Richerson, Morten H. Christiansen, 2024-04-30 Leading scholars report on current research that demonstrates the central role of cultural evolution in explaining human behavior Over the past few decades a growing body of research has emerged from a variety of disciplines to highlight the importance of cultural evolution in understanding human behavior Wider application of these insights however has been hampered by traditional disciplinary boundaries To remedy this in this volume leading researchers from theoretical biology developmental and cognitive psychology linguistics anthropology sociology religious studies history and economics come together to explore the central role of cultural evolution in different aspects of human endeavor The

contributors take as their guiding principle the idea that cultural evolution can provide an important integrating function across the various disciplines of the human sciences as organic evolution does for biology. The benefits of adopting a cultural evolutionary perspective are demonstrated by contributions on social systems, technology, language, and religion. Topics covered include enforcement of norms in human groups, the neuroscience of technology, language diversity, and prosociality and religion. The contributors evaluate current research on cultural evolution and consider its broader theoretical and practical implications, synthesizing past and ongoing work and sketching a roadmap for future cross-disciplinary efforts.

**History in the Southwest Pacific** Jonathan S. Friedlaender, 2007-04-19. The broad arc of islands north of Australia that extends from Indonesia east towards the central Pacific is home to a set of human populations whose concentration of diversity is unequaled elsewhere. Approximately 20% of the world's languages are spoken here, and the biological and genetic heterogeneity among the groups is extraordinary. Anthropologist W. W. Howells once declared diversity in the region so Protean as to defy analysis. However, this book can now claim considerable success in describing and understanding the origins of the genetic and linguistic variation there. In order to cut through this biological knot, the authors have applied a comprehensive battery of genetic analyses to an intensively sampled set of populations and have subjected these and complementary linguistic data to a variety of phylogenetic analyses. This has revealed a number of heretofore unknown ancient Pleistocene genetic variants that are only found in these island populations and has also identified the genetic footprints of more recent migrants from Southeast Asia who were the ancestors of the Polynesians. The book lays out the very complex structure of the variation within and among the islands in this relatively small region, and a number of explanatory models are tested to see which best account for the observed pattern of genetic variation here. The results suggest that a number of commonly used models of evolutionary divergence are overly simple in their assumptions and that often human diversity has accumulated in very complex ways.

*Genetic, Linguistic and Archaeological Perspectives on Human Diversity in Southeast Asia* Li Jin, Mark Seielstad, Chunjie Xiao, 2001. Southeast Asia is regarded as one of the birthplaces of modern humans. Recent genetic evidence shows that it was probably the entry point of modern humans from Africa into East Asia and Oceania. With the help of new markers, X (mostly from the Y chromosome and mtDNA), several recent efforts have been made

to study the populations of Southeast Asia which have been somewhat neglected in the past A new picture of the origin and migrations of modern humans in this region is quickly emerging In this book the leading researchers in the studies of Southeast Asian East Asian and Oceanian populations present the most up to date results of their research Contents Prehistory of Human Populations Archaeological Linguistic and Paleontological Perspectives Prehistory Language and Human Biology Is There a Consensus in East and Southeast Asia C F W Higham Human Diversity and Language Diversity W S Y Wang Before the Neolithic HunterBGatherer Societies in Central Thailand R Thosarat The Peopling of Southeast Asia The Case for an African Rather Than an Asian Origin of the Human Y Chromosome YAP Insertion P A Underhill Genetic History of Ethnic Populations in Southwestern China B Su et al Y Chromosomal Variation in Uxorilocal and Patrilocl Populations in Thailand M Srikumool et al Genetic Relationships Among 16 Ethnic Groups from Malaysia and Southeast Asia S G Tan The Peopling of East Asia Chinese Human Genome Diversity Project A Synopsis J Chu Origins and Prehistoric Migrations of Modern Humans in East Asia B Su The Peopling of Oceania The Genetic Trail from Southeast Asia to the Pacific R Deka et al The Colonization of Remote Oceania and the Drowning of Sundaland J K Lum Readership Upper level undergraduates graduate students and researchers in genetics anthropology and linguistics [Human Language](#) Peter Hagoort, 2019-10-29 A unique overview of the human language faculty at all levels of organization Language is not only one of the most complex cognitive functions that we command it is also the aspect of the mind that makes us uniquely human Research suggests that the human brain exhibits a language readiness not found in the brains of other species This volume brings together contributions from a range of fields to examine humans language capacity from multiple perspectives analyzing it at genetic neurobiological psychological and linguistic levels In recent decades advances in computational modeling neuroimaging and genetic sequencing have made possible new approaches to the study of language and the contributors draw on these developments The book examines cognitive architectures investigating the functional organization of the major language skills learning and development trajectories summarizing the current understanding of the steps and neurocognitive mechanisms in language processing evolutionary and other preconditions for communication by means of natural language computational tools for modeling language cognitive neuroscientific methods that allow observations of the human brain in action including fMRI EEG MEG and others the neural infrastructure of language capacity the genome s role in building and maintaining the language ready brain and insights from studying such language relevant behaviors in nonhuman animals as birdsong and primate vocalization Section editors Christian F Beckmann Carel ten Cate Simon E Fisher Peter Hagoort Evan Kidd Stephen C Levinson James M McQueen Antje S Meyer David Poeppel Caroline F Rowland Constance Scharff Ivan Toni Willem Zuidema *Encyclopedia of Language Development* Patricia J.
