Computers As Assistants Peter Hoschka, 2021-01-31 Computer systems based on the notion of the computer as assistant have recently become the focus of intense interest The expanding role of the computer in everyday life and the growing number of untrained users make it necessary to think about new ways of dividing labor between humans and machines Future systems must take on more tasks and perform them more competently and autonomously than existing systems If they are to be adequately flexible and responsive to complexity they cannot automate their performance completely The aim of designers should be to create computer systems with capabilities similar to those of good assistants in the real world Effective assistance has many characteristics An assistant is expected to be competent in some domains of expertise to know the limits of his/her knowledge

to be able to process inexact instructions from clients to adjust to and learn from them to explain his/her behavior and suggestions and to support clients in communication and cooperation with other people This book believes that such capabilities can be built into computer systems To that end the chapter contributors discuss the concepts and methods particularly from the fields of artificial intelligence and computer supported cooperative work CSCW that they have drawn from to develop successful system prototypes They present several of these prototypes including assistants for graphics design knowledge discovery in data bases coordination support organizational memory user interface design and knowledge base construction As such this volume helps map out the future for all those involved in computer systems design The Knowledge Base in Educational Administration Robert Donmoyer, Michael Imber, James Joseph Scheurich, 1995-01-01 This anthology summarizes and critiques the current knowledge base in the field of educational administration **Handbook on Decision Support Systems 1** Frada Burstein, Clyde W. This volume constitutes the proceedings of the Sixth International Conference on Flexible Query Answering Systems FQAS 2004 held in Lyon France on June 24-26 2004 FQAS is the premier conference for researchers and practitioners concerned with the vital task of providing easy, flexible and intuitive access to information for every type of need. This multidisciplinary conference draws on several research areas including databases, information retrieval, knowledge representation, soft computing, multimedia and human computer interaction. With FQAS 2004, the FQAS conference series celebrated its tenth anniversary as it has been held every two years since 1994. The overall theme of the FQAS conferences is innovative query systems aimed at providing easy, flexible and intuitive access to information. Such systems are intended to facilitate retrieval from information repositories such as databases, libraries and the Web. These repositories are typically equipped with standard query systems that are often inadequate for users. The focus of FQAS is the development of query systems that are more expressive, informative, cooperative, productive and intuitive to use.
